Barred Plymouth Rocks and Single Comb White Leghorns

We have some fine breeders left and will sell them at reasonable prices. Our young stock is the finest we have ever raised, and have won at all the summer and fall shows where exhibited. Our record at the N. Y. state fair, Syracuse, 1906:

BARRED PLYMOUTH ROCKS

First and Third Cock Birds,
Second Hen,

First Pullet,
First Young Pen,

Second Cockerel,
Second Old Pen.

SINGLE COMB WHITE LEGHORNS

Second Young Pen,

Second and Third Old Pen,

Third Hen.

Buff Leghorns

I have the goods in S. C. Buffs, and a trial order will prove it. I can supply you with single birds, trios or pens at right prices. A few good breeding females to go cheap, also some cock birds. Cockerels of the finest blue ribbon quality. Every deal a square deal.

JAS. KUGLER, Jr. R. F. D. 1, Frenchtown, N. J.

Put Feathers On Your Eggs

That's the way the old Mother Hen does, and it's Nature's own way, too. The hen knows more about hatching eggs than you do, if you use one of those artificial heated boxes with smoky, stuffy lamps. Such contraptions cost lots of money in the first place and don't give you satisfactory results in the second place. Let us add, in the third place, that there is only one absolutely correct method. We have it in the

J. F. SIEMS.
German Poultry Scientist.
Patented Natural Hen Incubator.

Natural Hen Incubator

Two Hundred egg size \$3.00. Hen instinct controls the whole process from beginning to end of hatch. No moisture or lamp or regulating attachment to give trouble and failure. Thousands are discarding their hot and hot water failures for our system. Send today and make success sure. **Agents Wanted. Catalog FREE.**

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
Toronto. Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Penbrooke, Maine

Banner Roup Cure
is the only remedy that will positively cure Roup in all its forms. Guaranteed. It's put into the drinking water and the chicken takes its own medicine. Price 25 cents and 50 cents postpaid. Excelsior Wire & Poultry Supply Co., Dept. O 25-28 Vesey St., New York City.

White Wyandottes Win

At the Warsaw, Ky., Show just closed, Pierce, judge, I won in strong competition every prize offered but four. I won three 1sts, 2d, 3d, 4th, two fifths and \$25 cup at Kentucky State Show. Also winners at Cincinnati, Louisville and Hagerstown, Md. Hundreds for sale.

ELM HILL POULTRY YARDS
Ira B. Sleet, Prop. R. 9, Warsaw, Ky.

WYANDOTTES GOLDEN AND WHITE

JUN 16 1907

SUCCESSFUL DUCK PLANTS

WOODS DUCK FARM USES 65 CYPHERS INCUBATORS

POULTRYMEN OF EXPERIENCE

Managers and Owners of the Largest Successful
Money-Making Plants Use and Recommend

CYPHERS (Latest-Pattern) INCUBATORS

Because their business depends upon it, they must **Regularly** obtain the largest, strongest hatches. Small hatches or weak chicks or ducklings mean **Loss**. Regulators that cannot be trusted to regulate; thermometers that fail to register correctly; lamps that flicker and smoke; direct ventilation that dissipates the "moisture content" of the eggs—all these cause worry, loss of time—**Loss of Money**.

They must have the strongest, healthiest, and most vigorous chicks and ducklings, not only to ensure against loss by deaths of the weaklings, but so that **growth shall be quick** and marketing early. Poor incubators fail to perfect the chicks or ducklings **In The Egg**.

When the weather changes, these men cannot afford to have a slimy-built, single-wall, uninsulated machine; the variation of temperature would be so great as to be ruinous to the hatch. The best incubators are so well insulated with double walls and superior packing as to resist ordinary changes of weather. Therefore, the big successful money-making plants buy and use the Self-Regulating, Self-Ventilating, Non-Moisture Standard Cyphers Incubators—**They Buy The Best**.

Eight Years' Test. Has 74 Cyphers Machines.

OXFORD, PA., September 3, 1906.
CYPHERS INCUBATOR CO., Buffalo, N. Y.

We continue to have the same high opinion of the Cyphers Incubators as heretofore. Our experience with them dates back about nine years, and during that time we have always found them to perform the work satisfactorily. At present we are operating seventy-four (74) of your Standard No. 3 machines. Some of them have been in successful operation more than eight years and still do uniformly good work. These facts are the best evidence we can offer regarding our high opinion of your make of incubators.

*Superior Quality Farming***Strong and Hearty.**

GLASSBORO, N. J., August 29, 1906.
CYPHERS INCUBATOR CO., Buffalo, N. Y.

We have had a very successful season this year. Beginning with our first setting, which was started December 4, 1905, and ending with our last lot, which was started July 14, 1906, we set 23,729 eggs, all told, and hatched 12,114 ducklings. The highest average hatch was 90 per cent. of all eggs set. **Twenty-five settings gave us 80 per cent. and over. The ducklings were all strong and hearty** and came from the machines ready to go right off in a thriving manner. Our loss from disease was not over five per cent. We see nothing in these machines that could be improved upon. They are handy to operate and manage, especially since the improvement made in the form of nursery drawers.

E. H. PROUD.

The Leading Machine on the Market.

SOUTH EASTON, MASS., September 4, 1906.
CYPHERS INCUBATOR CO., Buffalo, N. Y.

We have used your incubators the past season and have found them to be all that you represent. Having been a manufacturer of incubators myself and always in strong public competition with many of the leading machines, I have no hesitation in saying that I consider the Standard Cyphers Incubator, latest-pattern, the leading machine on the market today. The regulation is simply perfection.

J. RANKIN.

Fifteen Years' Experience With Incubators.

EASTON, MASS., August 13, 1906.
CYPHERS INCUBATOR CO., Buffalo, N. Y.

I have hatched over 3,000 more ducklings than I ever did before, and these were hatched from the same number of breeders—in fact, I put less eggs into the machine than I did last year, as the old birds did not lay as well as usual. My ducklings this year were all out of your machines, with the exception of three hatches. Will use nothing but the Cyphers in future as I am positive I can get more and stronger ducks out of them than any other machine on the market. I have been operating incubators for the past fifteen years and have used four different makes—both hot water and hot air machines. The ducklings hatched out of the Cyphers are much better than those hatched out of any other machine I ever used.

*F. L. Bush***Has 65 Cyphers—Highest Percentage Ever Obtained.**

LEAMING PLACE, PA., October 10, 1906.
CYPHERS INCUBATOR CO., Buffalo, N. Y.

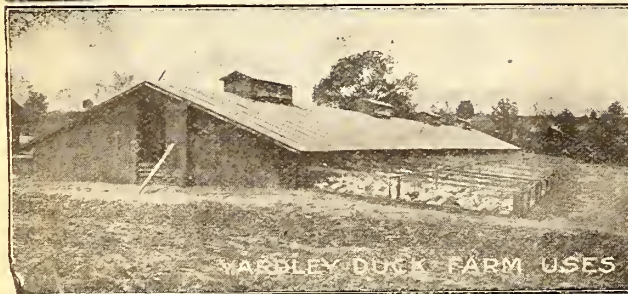

I take pleasure in stating that the sixty-five (65) 1906-pattern Standard Cyphers Incubators used by me during the past season have given entire satisfaction. The hatches all through have averaged a higher percentage than I ever obtained before from any style or make of incubator.

GEO. M. WOODS.

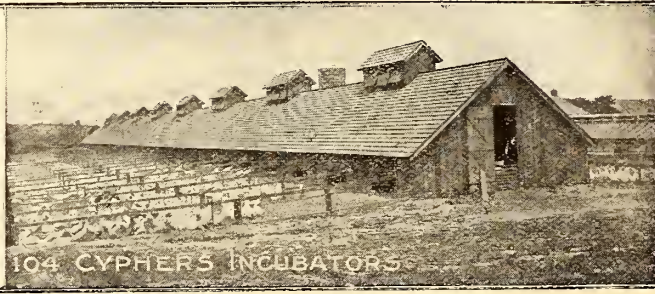

Has 45,000 Egg Capacity Now

WRENTHAM, MASS., October 10, 1906.
CYPHERS INCUBATOR CO., Buffalo, N. Y.

In our long experience in the poultry business we have had the opportunity to try and experiment with every well-known make of machine on the market, and we have proved to our complete satisfaction that for reliability, uniformity of temperature, simplicity of action and ease of operation, the latest Standard Cyphers Incubator has no equal in the market today; we hope in the near future to have a capacity of 100,000 eggs and no other incubator on the plant but the 1906-pattern Standard Cyphers.

SUCCESSFUL POULTRY FARMS

HARTMAN STOCK FARM USES 37 CYPHERS INCUBATORS

Contemplates Only One Change.

MILLBURN, N. J., August 22, 1906.
CYPHERS INCUBATOR Co., Buffalo, N. Y.

After a test extending over three seasons we are still very much in favor of the Standard Cyphers Incubators. They are business machines and hatch if there is anything to hatch. Your latest pattern, with the drop-bottom and nursery drawers, is a long stride in the direction of absolutely automatic control and ease in handling. Our fifteen (15) machines have proved themselves altogether reliable and the only change we contemplate is the buying of more machines just like them. They have been used by us in almost every temperature, both in house rooms and cellars, and we never have used any method of moistening the air, yet have obtained uniformly large hatches of strong, vigorous chicks. Your incubators have given us complete satisfaction, and we always take pleasure in recommending them to our friends.

THE MAPLEWOOD POULTRY FARM, *Harry M. Run*

Helped Them To Be Successful.

FRENEAU, N. J., August 10, 1906.
CYPHERS INCUBATOR Co., Buffalo, N. Y.

We are glad to express our appreciation of the Standard Cyphers Incubators. We are using no other machines, which shows our entire faith in them. First, we tested five of your incubators with eleven others of three different makes. Yours so far out-classed the others both as to number and strength of chicks hatched that two years ago we discarded all but yours, doing so strictly as a business proposition. We attribute much of our success in the poultry business to the use of your incubators.

MONMOUTH POULTRY FARMS, *J. C. Pines*

Used Them for Eight Years.

OSSINING, N. Y., September 5, 1906.
CYPHERS INCUBATOR Co., Buffalo, N. Y.

I have been using your incubators and brooders, as well as your supplies, for the past eight years, and I have always been well satisfied. After carefully comparing your machines with others I have used, I do not hesitate to say that I consider the Cyphers Incubator Company's latest types of incubators and brooders the best in existence. Another matter of importance: I have invariably found the officers and employes of this company painstaking and obliging, and I therefore heartily recommend them to all poultrymen.

ROCK HILL POULTRY FARM, *J. H. Brown, Mgr.*

An Experience of 17 Years.

YARDLEY, Pa., August 27, 1906.
CYPHERS INCUBATOR Co., Buffalo, N. Y.

As heretofore, we have had first-class results with our thirty-four (34) incubators of your make. We take pleasure in recommending the Cyphers to be a well-made machine, a good hatcher, and one that will hatch large, strong chickens or ducklings—the kind that the owner has a good chance of raising. We have been using incubators for the past seventeen years, and during that time we have tried most of the leading makes. Five years ago we purchased one large-sized Cyphers for trial, and since then have bought more each year until we now have thirty-four (34) of your large machines, which is the capacity of our plant. Of course your machines are satisfactory to us or we would not have made this change.

S. B. & E. W. TWINING.

Largest Plant West of New York State.

COLUMBUS, OHIO, September 10, 1906.
CYPHERS INCUBATOR Co., Buffalo, N. Y.

Our hatches this season were better than ever, and my feeling towards Cyphers Incubators grows warmer and stronger each season. Have personally operated Cyphers Incubators in large numbers during the last six years and can cheerfully recommend them as being superior to all others I have tried. We are now using fifty-seven (57) of your largest-sized incubators. You are authorized to say that we recommend your make of incubators to be the best on the market.

HARTMAN STOCK FARM, *H. B. Barker, Mgr.*Hatched More and Stronger Chicks.
"Money In Pocket."SHORT HILLS, N. J., October 9, 1906.
CYPHERS INCUBATOR Co., Buffalo, N. Y.

We consider that although we practically gave away our old stock of incubators, which included a majority of the best known makes in America, we are money in pocket as a result of installing the No. 3 machines we bought from you last year. With your machines we have hatched more and stronger chicks from the fertile eggs than with any other machine we ever tried. We have operated your machines under conditions where the temperature in the room was away below the freezing point, also in a temperature of nearly ninety degrees, and under both conditions the machines have done their work beautifully.

SHORT HILLS POULTRY FARM, *B. C. Lusk*

Write For Free Illustrated Catalogue of 260 pages, entitled "How to Make Money with Poultry and Incubators." It's a big one. We pay postage. It contains six of the most valuable chapters ever published on Poultry. Chap. I.—Magnitude of the Poultry and Egg Industry; Chap. II.—Review of our Great Poultry Markets; Chap. III.—Profit-Making Broilers, Roasters and Capons; Chap. IV.—The Profitable Pekin Market Duck; Chap. V.—Successful Chick Rearing; Chap. VI.—Profitable Egg Farming. Also photographs of Successful Poultry Plants, both Fancy and Commercial; Photographs of Government Experiment Station Experts; America's Foremost Exhibitors, Owners and Managers,—their Poultry and Duck Houses, Incubator Cellars and Brooding Houses; Our Complete Line of Incubators, Brooders, Poultry Houses and Supplies. If in return for this book, you will send us the names and addresses of two acquaintances who keep poultry, we will consider it a favor. Address Nearest Office.

Just Deduct Our Cash Present From the Regular Price of the Machine and Send Us the Balance.

Built from the Standpoint of Experience, Not Theory.

Now Understand!

These are not cheap machines, mind you, built for bargain sales only, but are our regular high grade 1907 Model

This is the Brooder that has made Poultry Raising Easy and Profitable.

IDEAL

Incubators and Brooders

that have made such remarkable hatches during the past few years.

In construction, in materials used in making them and in results obtained they are the peer of any incubators or brooders ever made;—strong and substantially built, of strictly high grade lumber—with every convenience that has yet been discovered to make hatching sure and easy.

They are the result of my twenty-five years experience on the famous Millhook Poultry Farm, where almost every incubator ever made has been tried and tested.

The Ideal was built first to give us a thoroughly dependable and satisfactory machine for our own use. It proved so successful that we are compelled to manufacture it for other members of the poultry fraternity.

We give you a strong and binding guaranty and we know you will be more than satisfied with results.

Why not take advantage of our offer and order now?

Complete Line of Poultry Supplies.

We manufacture and sell everything that the successful poultryman needs for the profitable conduct of his business.

Our line of supplies is not surpassed in extent or quality by any house in the country. It includes special poultry rations, poultry remedies, lice-killers, brood coops, bone-cutters, drinking fountains and colony houses, etc., etc., etc. We sell nothing which we cannot honestly recommend

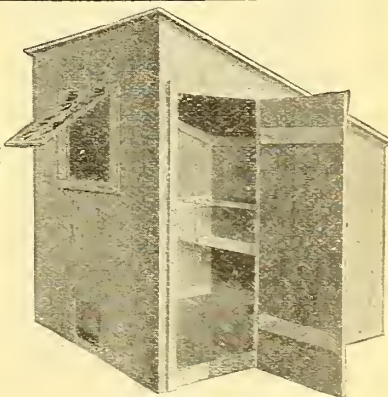

BIG BOOK FREE.

Send your name today for our big 128 page book, "Poultry For Profit," which fully describes our complete line of incubators, brooders and supplies, illustrates and describes the principal varieties of fowls, and is brimful of interesting information which will help you make more money from your fowls. Write for it today.

Medina, Ohio, Aug. 28, 1906.
J. W. Miller Co., Freeport, Ill.
Gentlemen: The two No. 3 Incubators purchased from you have given the best of satisfaction, they hatched every fertile egg. I will send you an order for two No. 2 Brooders.
Respectfully,
GRACE JONES.

Cazenovia, Minn., Apr. 13, 1906.
The J. W. Miller Co., Freeport, Ill.
Gentlemen: I purchased one of your No. 3 Incubators second hand, and started it March 7th, as a result I got 99 chicks from 120 fertile eggs which I consider exceedingly good, taking into consideration that it was the first time I ever saw one of your machines and the time of the year it was run. I have run two other makes of machines, but the IDEAL beats either of the others, both for management and hatching.
I remain yours truly,
F. L. EDSILL.

For 20 to 25 Fowls.

J. W. MILLER COMPANY, Box 56, FREEPORT, ILL.

MODEL

INCUBATORS AND BROODERS

Chas. A. Cyphers

Sends a New Year's Greeting to All Progressive Poultrymen. Let Our Concentrated Aim be for More and Better Poultry, Higher Prices and Bigger Profits.

PROGRESS:

A New Year is with us, and those of us who have been actively engaged in poultry work feel encouraged for a fresh start;—feel that progress has been made. The reports coming in show that Model customers in every part of the country have increased their flocks, and in every way have had a most successful year.

Let the New Year be more successful still. Let us shun the fake, and work shoulder to shoulder for better poultry, higher prices and bigger profits. There is big money in market poultry and eggs. Let us go after it with renewed energy.

The work at the Model Farm the past season has given me a new grip on poultry matters. We have worked in a larger way, and accomplished some things heretofore not attained. We raised over 20,000 chicks with mostly portable equipment. We did this with Model Incubators and Model Colony Brooders.

While the Model Incubators and Model Methods were proving winners for the Model Farm, they were helping others to success:—helping others to build up flocks that were money-makers; to put their poultry farms on a dividend-paying basis. There is no sham about the farms where the Model equipment is used. They are not all buildings filled with emptiness, and garnished in the papers with the hot-air stories of those who sold them inefficient equipment and gave incompetent advice. Where the Model Hatchers are used you find real live chickens in goodly numbers; the mortgages paid; and a balance in the bank.

What a Model customer says who produced 7,000 layers with Model Hatchers:—

MR. CHARLES A. CYPHERS, Lakewood, N. J., Nov. 14th, 1906.
My DEAR SIR:—To create a flock of seven thousand Single Comb White Leghorns means healthy breeders, and an equipment that will hatch and rear perfect chicks.

We sincerely believe that without the "Model" hatchers we could not have perfected our Lakewood Farm layers into the great profit payers they are.

Mr. Cyphers our results this last year will place us in the first rank of successful poultry farms; and we feel that we owe our success largely to you. The years of research and accumulated knowledge that have enabled you to give us poultrymen an incubator that hatches chicks; and the advice and counsel to which you have made us welcome, and which have helped us avoid money-wasting errors, have, with our own work, made the Lakewood Poultry Farm a financial success. We wish you and the Model a prosperous year.

Very truly yours,

LAKEWOOD FARM COMPANY, AUSTIN G. BROWN, Pres.

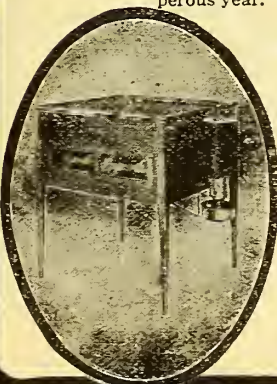

Write for catalog of these Model Incubators and Brooders; and let me tell you of the work at the Model Farm.

Also send two dimes for a copy of my book "Eggs, Broilers and Roasters." It gives the cost of production in all branches of the poultry business. It gives the market quotations week by week averaged for three years. It shows when a chick hatched any week in the year could be marketed as a broiler or as a roasting chicken, and the profit it would make. It also tells of the profits of egg production and how best to secure them. Write me today.

CHAS. A. CYPHERS,

301 Henry Street,

Buffalo, N. Y.

Hatch and Brood

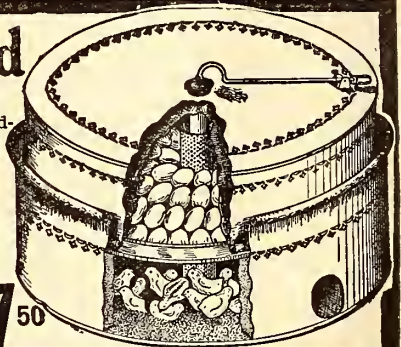

AT SAME TIME

Here's a new thing—a complete hatcher and brooder, one machine that performs both of these operations at the same time and does both well. The

METAL MOTHER Brooder-Hatcher

is a long step ahead of all others—the most remarkable invention in the poultry world. With it 2 qts. of oil hatches 50 eggs and broods the chicks—brood one batch while you make another hatch. Our nest system enables you to do this. A time-saving, labor-saving, oil-saving machine complete for \$7.50. Free catalog—tells how it works. Regular Cycle Hatchers and Brooders at \$5 each are great favorites. Write today.

CYCLE HATCHER CO., BOX 214, ELMIRA, NEW YORK

The Racine

Incubator

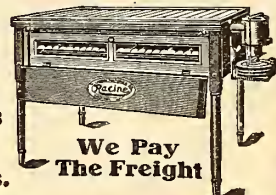

is the simple, sure, dependable kind. Used by thousands of successful poultry men and women.

Automatic heat regulator; 14 oz. copper tank and boiler; white pine case, double walled; self-ventilated; nursery; no moisture. Built by a man who devoted 25 years to the problem—who knows most about incubators. It can be operated by anyone, anywhere. There lies the great value of the Racine.

If you seek an incubator or brooder and wish to know about all kinds, please send for our remarkable **Book About Incubators**—written by the man who made the Racine. It is a complete education on incubators. It tells facts that you need to know before buying—facts you would not think of. It tells, too, how to make poultry pay—25 years experience. Don't buy without reading it. The book is free. Write today for it. Address

Racine Hatcher Co., Box 26, Racine, Wis.

We have Warehouses at Detroit, Buffalo, Kansas City and St. Paul.

We Pay
The Freight

FOR OUR \$7⁹⁰ DELIVERED 100 EGG HATCHING WONDER

We make this very low price to introduce our machines and show at what small expense you can start in the business of raising poultry. It must be a good machine because

we have made it solely with the idea that if you succeed in making good hatches and raising several small crops of chickens this year you will want to go into the business in a larger way next year. With this machine we expect to win your friendship for a continued patronage.

DESCRIPTION OF THE MACHINE

The 100-egg Hatching Wonder is 26 inches long, 21 inches wide and 14 inches high. It has triple walls, triple top and triple bottom, scientifically constructed to hold the temperature necessary within the incubator for the least expenditure of oil, regardless of how cold the air outside. It has a large aluminum coated tank and heater so that, instead of air which cools quickly, we have the benefit of a circulation of hot water, which cools slowly and cannot be quickly heated too hot. Each machine too is fitted with our regular Victor regulator, which has a record of maintaining the temperature of 103 degrees for the 21 days of incubation without appreciable variation. The heater is jacketed so that there is not the loss of heat that there would be if there were only a single thickness of metal between the water in the heater and the outer air. This too is a feature of our Victor machines which we give to purchasers of this small machine. There is an outer covering of metal around the water chamber with an air space between, and this double jacket makes a tremendous difference in the oil consumption. This brings us to the lamp, and here too we give our patrons the advantage of our 40 years of experience. We have learned that nothing is too good that can be made in the way of a lamp burner and the very best is included in this outfit. Bigness counts here too. A big lamp bowl doesn't need filling so often and is less apt to burn out if forgotten for a few hours—a big wide burner means heat—a big stout metal chimney doesn't get broken, and that means a saving in expense. All these things the Hatching Wonder has. They are the vitals of an Incubator. Lamp, heater and tank provide the circulation of heat which means life to the chicks that are to come. An ample supply of hot water passes up from the heater over into, through and around the tank, and becoming gradually cooler, drops back into the bottom of the heater, where it is warmed and again put into circulation. Such an incubator is a living mother, with the lamp the stomach, the heater the heart, and the water the blood circulating over and around the chamber in which the eggs are to become baby chicks. Below the egg chamber with its movable tray is a nursery for the care of the newly hatched chicks—taking them off of the tray containing the hatching eggs so that they do not interfere with or smother the piping chicks. The double glass in the door permits of the inspection of the interior of the incubator without the necessity of subjecting either eggs or chicks to drafts of outside air. Ventilation is provided for by air inlets in the vicinity of the hot water passage into the tank, insuring a constant supply of warm fresh air. There is absolutely no way and it is utterly impossible for the fumes of the lamp to get into either the egg chamber or the nursery, or any part of the interior of the incubator.

In addition to the substantially built incubator with its egg tray and nursery, aluminum coated tank, heater, lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, giving valuable hints as to the raising of young chicks, besides telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered shipped with the incubator, the delivered price of both is only \$11.50. The Brooder provides a necessary home to take the place of a mother hen's sheltering wings during the first weeks of a chick's life, and up to the time a hen would wean her brood. It furnishes a good warm, evenly heated, well ventilated nestling chamber large enough to afford sufficient exercise when weather conditions do not permit of an outdoor range. Brooder cases are made warm and tight and dry. The lamp and metal work are of the same quality as go into the Incubator. Ventilation and ease of cleaning are carefully provided for. In every way the Brooder is a fit companion to the Incubator. The purchaser of one of these outfits at \$11.50 for 100-egg Incubator and Brooder, delivered anywhere east of the Rockies, has a bargain in chicken raising machinery never before approached.

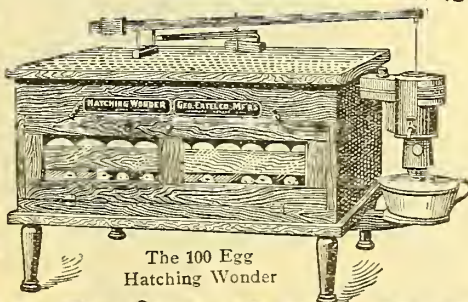

Better write us to-day and have yours ready to start up just as soon as possible. We will ship promptly on receipt of your order. Remit in post office or express money order or bank draft, and if the machine is not just as we represent it, you may send it back and we will return the full amount you paid.

You need have no hesitation in dealing with us as we have been in business 40 years, and have a paid up capital of \$60,000.00. We have a reputation for fair, square, upright dealing, which we intend to maintain. You can ask your banker or express agent about us.

If you want further information, write for our large illustrated catalogue "The Victor Book," testimonial sheets and order blank. A postal will do but the coupon below may be more convenient, only write us to-day before you forget.

NOTE: The price of the Improved Hatching Wonder Incubator delivered West of the Rockies is \$9.90, and the Incubator and Brooder together \$14.75. Our prices are delivered at your railroad station, not f. o. b. factory. F. o. b. factory means that you may have to pay cartage from the factory to their station.

15 DAYS FREE TRIAL

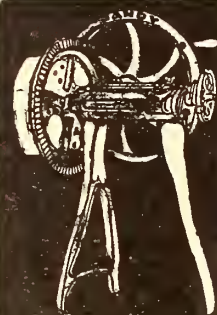

NO MONEY IN ADVANCE

What better chance will you ever get than this to buy a Bone Cutter? Our liberal proposition allows you to test the "Dandy" Green Bone Cutter for 15 days before you buy it? That means that it must suit you or you don't keep it. You know just what you are getting. Some bone cutters run so hard that they take a strong man's muscle to cut enough bone for a few birds—in fact the operation is so laborious that the fowls don't get their cut green bone regularly. Such a cutter is a nuisance and a disappointment. You don't want that kind. The "Dandy" runs so easily a ten year old boy can operate it. It is a rapid cutter, preparing the bone in ideal condition to feed. Being automatic it will not clog up, run hard or splinter the bone. It is easily cleaned which is another point in its favor. "Dandy" Green Bone Cutters are built in a specially equipped factory by workmen who do nothing else but build bone cutters—that's why they are so well built, so strong and durable and why they are always ready to do their duty.

Cut green bone insures a wonderful increased supply of fertile eggs. It is the best ration ever fed as an addition to the regular grain feed. Cut green bone is rich in protein—the food element necessary to keep poultry productive and profitable. Grain does not contain enough of it. Cut

green bone saves grain and keeps the birds in much better condition—it also makes flesh and feathers. "Dandy" Green Bone Cutters are made in several sizes to suit large or small poultrymen. We have just the size you want. Write for catalog and ask for free trial plan—do it today.

Stratton Mfg. Co.

MAKE MONEY RAISING POULTRY.

It is a simple matter to make your poultry raising pay if you go at it right.

Every experienced poultry raiser realizes that a perfect Incubator is the first essential in the poultry business—

If the Incubator fails his poultry business fails.

The "QUEEN" Incubator can't fail because:

It is absolutely perfect.

To every detail of its construction is given the attention of men who have built incubators for years—

Every part of the "Queen" is made from the highest-class material that can be found for the purpose, such as—

Finest California selected Redwood—

Heavy first-grade sheet copper—

Perfect sheets of Asbestos.

Every tank holds water without a drop of solder as the joints are made by a process original with us, and which we call lock-seaming—

That is, the edges of the copper where they join are bent over and locked together under enormous pressure—This process insures an everlasting copper tank.

The woodwork in the "Queen" is joined by cabinet makers who do as fine work as your parlor furniture shows.

The safety lamp is double jacketed and is so made that the least possible amount of heat escapes, making the oil consumption less than in any other Incubator.

The saving in oil alone will save the price of the "Queen."

There is plenty of room in the nursery tray to allow the newly hatched chicks to stretch themselves.

There is not a single weak point in the "Queen."

Select the size you want from our Free Catalogue, and we will ship it to you, freight prepaid. If you don't find every statement we make regarding it true send it back to us—Don't buy an Incubator that doesn't suit you.

You would hardly think we could build an Incubator like the "Queen" to sell at about the same prices ordinary machines are offered, but our improved factory facilities, which save enormous construction expense, and the vast number of machines we turn out enable us to place the "Queen" on the market in competition with machines of cheaper construction, as far as price is concerned.

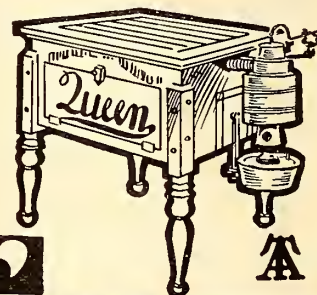

Don't make the mistake of buying an Incubator without sending to us for the Free "Queen" catalogue.

Compare the "Queen" with other makes, then consider the price at which it is offered and you will buy it—There is no question about that.

PINKERTON MANUFACTURING COMPANY,

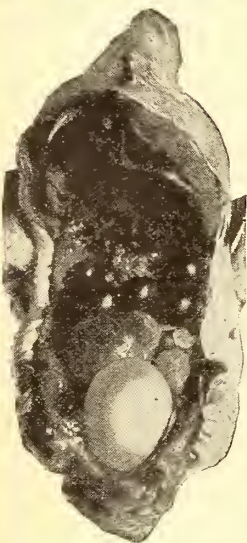

1021 North 14th Street.

LINCOLN, NEB.

DO YOU KNOW

The Potter System of ? Selecting Laying Hens ?

Don't kill a hen in this condition but learn the secret of selecting the laying from the non-laying hens.

Greatest Discovery of the Century in the Poultry World

Do you know how you can have \$2 profit not a \$1 loss, on every hen you keep?

- How to breed only laying hens?
- How to select your laying hens?
- How not to kill your laying hens?
- How to mate your birds for best layers?
- How to save feed and labor and money?
- How to keep the layers and kill the non-layers?
- How to tell the drones and the barren hens?
- How to select the best laying pullets?
- How to stimulate the hen's laying organs?
- How to estimate the number of eggs a hen will lay in a week or a month?
- How to keep fewer hens and make more money?
- How to keep your fowls and their quarters free from mites and lice?
- How to hatch chicks that will make laying hens?
- How to make poultry pay every month in the year?

DO YOU

want to make more money on your poultry? Do you want to be able to pick the layers from the loafers in your flock? Decide for yourself whether you need the valuable information we are offering. Thousands of poultrymen are using the Potter System to their profit and advantage. So can you. Write today for free circulars telling about it.

DON'T BUILD THAT NEW HEN-HOUSE

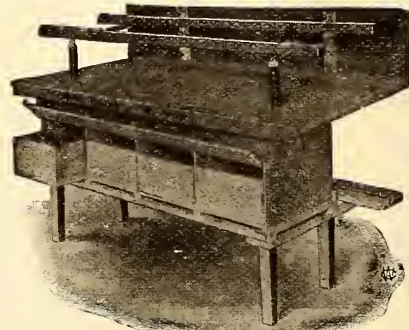

or think of fixing up the old one until you have seen our large new 64-page catalog on poultry house fixtures. The biggest and best ever issued; over 50 illustrations showing hen-house fixtures in three

styles and twelve sizes. Also "Simplex" Trap Nests; W. P. attachment, etc. No poultryman can afford to be without this book. For eight years we have manufactured this line of goods. Thousands of poultry houses in every section of the country are equipped with Potter Fixtures. You can have convenient and sanitary quarters, and you can save time, worry and money by using them.

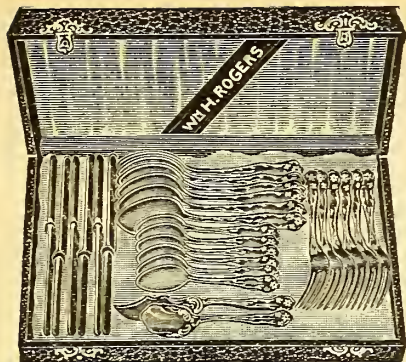

Our Catalogue tells you how to keep free forever from these pests—LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for one red stamp to cover postage.

Bogardus' S. C. Buff and Black Orpingtons

Always win wherever shown. 1st prizes at Chicago, Indianapolis, Hagerstown, Frankfort and Warsaw, Ky. At the great Poultry Association Show, Cincinnati, Jan. 1906, they won SEVEN out of a possible 10 FIRSTS. I will give you better value for your money than you can get anywhere. Write your wants and enclose stamp for catalog. Eggs \$5 per 15, \$9 per 30.

O. A. BOGARDUS : Box 31, WARSAW, KENTUCKY

Hand's Handsome White Wyandottes

Won first and third cockerel, first and fifth pullet, second pen at Chicago, 1903; fourth cockerel at World's Fair, 1904; second pullet, eighth hen, Chicago, 1906. I breed all my winners. Exhibition and choice breeding stock for sale.

MRS. H. W. HAND :: Box H, WHITE HALL, ILLINOIS

BUFF WYANDOTTES

Ten acres wholly devoted to this popular variety; the very finest of specimens from a long list of Chicago, Detroit and New York winners. The best quality ever grown. Ten years' experience with the variety. It will pay you to write me if you want Buff Wyandottes.

W. R. WOODEN :: Battle Creek, Michigan

Partridge, Silver Penciled, Columbian WYANDOTTES.

Winners at St. Louis World's Fair, Chicago, Indianapolis, Cleveland, Cincinnati, defeating Madison Square Garden winners this winter. The finest breeding pens of these varieties in America. Stock always for sale.

CARVER & AVEY Columbia City, Ind.

Silver Laced Wyandottes

Exclusively. Line bred for 20 years. We have the largest and best flock in the world. At 7 Chicago shows since 1900 we won 5 firsts out of a possible 7 on pullets, winning in all 23 prizes on pullets out of a possible 35 being nearly double those won by all of our competitors combined; also won 1, 2, 3, 4, 5 two years in succession, a record never approached by any breeder. This, with the winnings made by our stock in our own hands and in the hands of our customers at the large shows, East, West, North and South, proves the quality of our stock. Don't you think some of this blood would be good to improve your flock, or to lay the foundation for a new one? We have 500 of the best we ever raised, and can furnish single birds, pairs, trios or pens that will win, at prices that are right for quality of stock. All stock guaranteed to give satisfaction. Send for circular or write your wants.

North Side Poultry Yards :: A. & E. Tarbox, Box A5, Yorkville, Ill.

Did You Read Our Last Month's Advertisement

About the Latest Improvement in the

1907 PRAIRIE STATE INCUBATOR

Fig. 1. Testing the Hen that Stole Her Nest

the lesson it teaches. In other words, you will get the benefit of knowledge that has required much time, experience and expense to acquire, simply for the mere cost of the time necessary to read it.

While artificial incubation is a great many years old, the successful practice of it is in its infancy. There is much yet to learn and as it has proven to be such a deep, perplexing problem, we naturally feel considerably elated when we do make a new discovery which works out successfully in practical everyday experience.

We are satisfied we have made one of the greatest steps forward the past year that has ever been accomplished, and that is, the hatching of chicks so near like those hatched under the old hen that an expert cannot tell the difference.

At some of the recent shows, we were accused of exhibiting chicks that were hatched several days before the show began because they were so unusual in size, activity, vigor—so much like hen-hatched chicks.

But that is the result of our past season's investigations and we show here how we accomplished this important improvement which has put the 1907 Prairie State a long way ahead of any other machine on the market.

First, we determined to find out just how Mrs. Hen succeeded in bringing off livelier, healthier, stronger, larger chicks than could be hatched in an incubator. To do this right and to let nature have full sway, we

If you did not read our December advertisement, it will pay you to hunt up your copy of this paper and read it.

It will also pay you to read every word of this advertisement because it contains information that you will be very glad to know, if you have had experience in hatching and rearing chicks.

If you are a beginner in this work, you will save yourself a lot of disappointment, loss of time and money if you follow

waited until she "stole" her nest (see Fig. 1), as her natural instinct has much influence.

We then started in to get at the actual conditions from time to time as they really exist in the hen's nest, and by the aid of a very sensitive and accurate hygrometer we made notations of the heat, humidity, ventilation, etc., making a very accurate record of same.

We tested in like manner the hen set in a tight nest, thoroughly dry; also a hen in a ventilated nest, so that air circulated freely around and about the eggs like it does in an incubator (see nest in center of Fig. 2) and obtained more valuable points.

The next step was to reconstruct the egg chamber in the Prairie State so that it would give us the same relative conditions found under the hen, and to prove our efforts, we then subjected our machines to the same hygrometer tests. In all, with hens and incubators, we conducted in our special experiment works over 60 rigid tests last year.

Our success was truly gratifying and we attribute it solely to our close adherence to nature and we were governed only by actual practical results.

We wanted nothing in the way of results that could not be obtained in the hands of our customers, either inexperienced or experienced in operating incubators.

We were not confined to testing our own machines—we test every standard make known for comparison and when we say the 1907 Prairie State machine is the survival of the fittest we have reasons *why*.

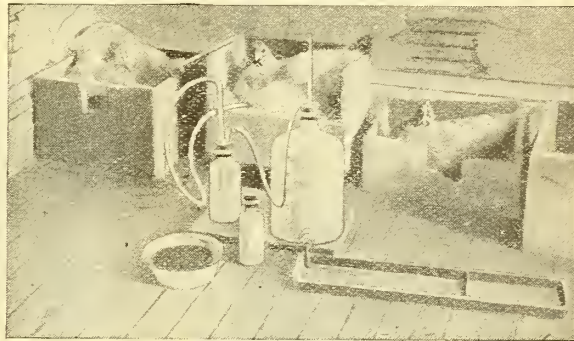

Fig. 2. Testing Hens in 3 Different Nests

We have this year a machine that will bring off the highest percentage of chicks and bring off bigger, better, stronger chicks than any machine made. Chicks just like the old hen brings off. Chicks that are strong, full of nutritious blood, free from anaemia so common with incubator hatched chicks. Chicks that look three or four days old when they pop out of the shell. Chicks that have plenty of activity and strength to get out of the shell quickly.

But don't take our word for this altogether; just read this letter. Then send for our New Catalog giving full detailed description of our 1907 improvement, how we did it and more proofs from users. You'll make a mistake if you buy a machine before investigating the 1907 Prairie State. Ask for our new Brooder Catalog—it will interest you.

G. C. CREELMAN, B. S. A., M. S.
President.

W. R. GRAHAM, B. S. A.
Manager and Lecturer.

POULTRY DEPARTMENT,
Ontario Agricultural College,

Guelph, Canada, Dec. 5th, 1906.

DEAR SIRS:—

In regard to the test of carbon dioxide in your machine before the eggs were placed in it I would say that we have found the machines on two tests to have practically the same percentage of carbon dioxide in them as was in the air surrounding the machine. This leads us to believe that the heater is gas tight. In testing several samples of carbon dioxide as determined from the air inside the machine we have good reason to believe that your machine is satisfactory as far as gas tightness is concerned. In our tests we have found the evenness of distribution of heat to be also satisfactory. In one test with clinical thermometers we did not get a variation of over 2-5 of 1 per cent in temperature in the different parts of the machine. We have also found that the supply of moisture can be controlled and you can hold evaporation in this machine as low or lower than what a hen does when sitting upon the ground.

Very truly yours,

W. R. GRAHAM.

AFTER ALL IT'S THE OIL

Even temperature has a great deal to do with the successful hatching and rearing of chicks. Even temperature often depends on a very simple thing—the kind of oil you use. Impure oil clogs the wick with impurities from the acids in the oil. A crust forms on the top, the flame grows smaller, the heat becomes less intense, the lamp begins to smoke and much mischief is done. There would be larger per cent hatches, more vigorous chicks and fewer chicks smothered to death in brooders if pure oil was used.

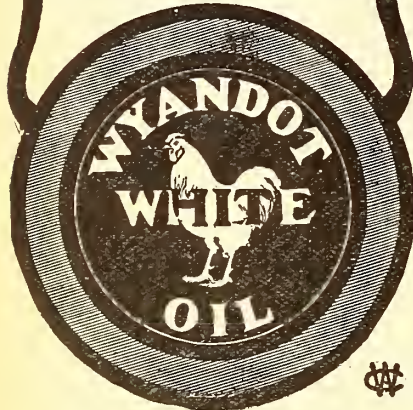

Wyandot White Oil

is a pure oil refined by a process which frees it from impurities found in other oils.

It burns with a constant, steady flame without smoking or making any fumes of an injurious character. The wick does not get gummy or dirty and the lamps are easier to care for.

Wyandot White Oil is a perfect fuel; insuring the steady evenness of temperature so necessary for the best results in both incubator and brooder. Try it and be convinced.

Write for circular and prices.

THE ROOT BROODER

IS A BROODER SUCCESS. IT BROODS THE CHICKS JUST AS NATURE DOES. THIS PICTURE TELLS THE STORY. IT SHOWS HOW CHICKS LIVE AND THRIVE IN THE "ROOT"

There is a big difference in brooders. Just any brooder isn't a good one. The poultryman knows it—the chicks show it. Poor machines selling for less than the "Root" cost a great deal more in the end, because they cannot raise so many chicks—

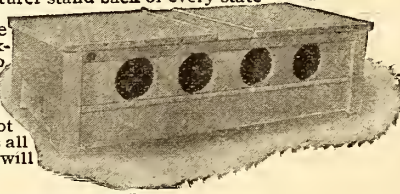

they are not constructed on lines that save money like the "Root" machines. All has been done that brains, mechanical skill and competent workmen can do to make the "Root" a perfect brooder. Our experiments have been going on for nine years—not a day now and then, but all the time, under all conditions. In these years we have learned many things about brooders. These discoveries have enabled us to build a brooder that has proved itself practical in every way—a brooder that broods its chicks just as the mother hen broods her young. When we started out to make the Root Brooder, we said that it must be right before we would place it on the market. It is ready now with our guarantee.

WE WANT YOU TO TRY THE "ROOT" AT OUR RISK

Try it—right on your own plant—with your own work—in your own way. Test it in any way you like—in coldest weather—and if you don't find that the Root Brooder will raise more and better chicks than any other brooder can, send it back, at our expense, and your money will be refunded in full. Surely this is an offer so fair and broad that even if you had made it yourself you could not have made the conditions fairer. And this is the kind of an offer that means something to you. We are manufacturers and as a manufacturer stand back of every statement we make. Our guarantee is a legal assurance that the Root Brooder will prove satisfactory or it may be returned at our expense and the purchase money returned to you. About prices we haven't said a word, for if you consider quality only, our prices are the lowest, considering price only, always reasonable, \$8, \$12 and \$15. Why not write us to-day for our circular which tells all about "the brooder that broods." We will gladly send you all our literature free. Root Brooders are shipped freight prepaid.

Makers of
"The Brooder That Broods"

Fishel's White P. Rocks

ARE BETTER THIS SEASON than ever before. Never have I had as many choice exhibition birds, selected breeders or good utility flocks to sell as I have at the present time. I know I am in a position to give you better value for your money than any one else, for the reason that I have thousands to select from, while others have but a few hundred. Remember all my birds are farm reared, strong husky birds. I forgot to tell you that the

U. R. FISHEL WHITE ROCKS WERE SELECTED BY THE U. S. GOVERNMENT

in preference to all other varieties to be used on their experimental farm. You surely can't go wrong if you follow in the footsteps of the United States. At nearly every poultry exhibition East, North, South or West the past season, the winning White Rocks were Fishel bred birds. This with the excellent record my birds made when shown by myself, surely convinces you they are

**There's Money
in Poultry**

Not everybody makes it, but not everybody uses good judgment in outfitting for the business. Don't expect to make money out of poultry if you cannot hatch dependably, at all seasons, in all climates, under all conditions, upwards of 90% of your fertile eggs. Not all incubators will do this. Show your good judgment by selecting one that will.

Raising all the chicks you hatch is just as important. Just any sort of a box for a brooder will not do. See to it that you get the best possible substitute for the hen to mother your chicks.

You will start out right in the poultry business and go a long ways toward assuring your success if you outfit with

**SUCCESSFUL
Incubators and Brooders.**

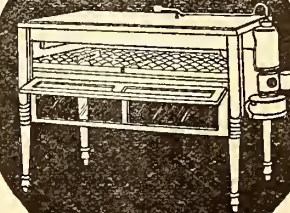

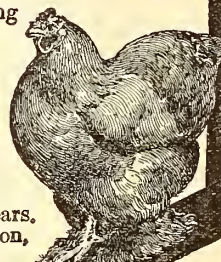

They are machines that have been proven. Many thousands have been in use for many years. They can be relied upon for uniform good results. Every user testifies to their perfect self-regulation, their dependableness and their uniform good results under all conditions.

Successful Incubators and Brooders for years have been, and now are, sold with the positive guarantee that, under like conditions, they will hatch as many and as strong, vigorous chicks from a given number of eggs, and will brood as many to maturity, as any other incubator and brooder in the world.

This guarantee protects you. Start right with proper machines. Incubator and Poultry Catalogue Free. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

SUCCEED
WITH A
SUCCESSFUL

Johnson, Incubator Man.

"I want to tell you Chicken Raisers about my Old Trusty Factory. I believe that it is the Biggest and Best Equipped Exclusive Incubator and Brooder Plant in the World. Others that should know tell me so and I believe it myself."

WELL, well! Time flies, sure enough, doesn't it?

Here it is pretty near a year since I had a good big talk with you folks. Tell you the truth, I've been too busy making and shipping incubators and brooders to do much talking. But I've made some big improvements in the factory and office end of the Old Trusty business, and I'm going to tell you about it if it takes the whole blamed page.

* * *

THE Old Trusty factory you see here is all mine and all paid for, too. I built it out of my hard earned profits of \$1.00 on each Incubator and Brooder, and I want to tell you, Friends, that Johnson's brow shed quite a bit of sweat.

Yes, I do feel pretty good about this new factory and the way my business has jumped up this year.

My wife and my customers have helped a whole lot. They're the only partners I recognize, and I cheerfully take my hat off to them.

* * *

As the Old Trusty factory now stands the wheels are turned with a 100 horse power steam plant.

The factory is equipped with electric light, water works and steam heat, also the very latest wood and metal working machinery, operated by over 200 skilled mechanics who have grown up with me in the business.

Last season we were not able to accept and promptly fill all orders, but for this season let me say we have our guns loaded. We have doubled our manufacturing capacity and have our store rooms loaded to the muzzle; we are ready for the big meeting.

I have store rooms located in different parts of the country and quick shipments will be one of our specialties; but let us talk about the 1907 Old Trusty incubator.

It is now fitted with interior chick drawers, and the nursery is 4½ inches deep.

The front doors are divided; that is, you can remove the egg trays and look after the incubation with-

The Old Trusty Factory Has Floor Space of 39,400 Feet.

(This picture is a real photograph)

out opening the whole front, otherwise the machine remains the same.

We have improved in every point improvable, but have not molested the principle that has made Old Trusty famous.

The big 1907 Catalog tells all about it, and a mighty interesting story it is, too.

* * *

I sold more incubators and brooders of the one brand last season than any concern on earth.

Did it right here at Clay Center, Neb., the best

town in the west for manufacturing. Have plenty of propositions to move into larger towns and greater troubles, but I do not care to sell out and "hike."

Would have no excuse for doing so; my business is going up instead of down and our mechanics stay with us. Yes, Sir, we are hooked up all right.

When you come to Nebraska, come to Clay Center.

Over the Old Trusty factory entrance you will find a big sign that says "Come In." Don't stop to knock at the office, come right in and let us talk the chicken question over from A to Z.

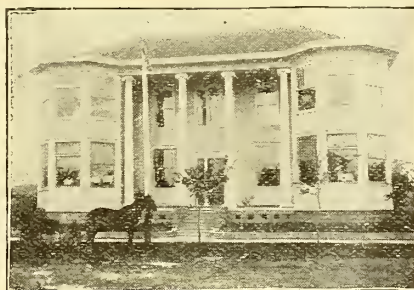

I've studied poultry and their ways in sickness and health, summer and winter, under all sorts of conditions, for a good many years now.

While I don't know it all, yet I've managed by hard digging to prove a good many things of practical value to every poultry raiser.

If you can't come, send for the catalog; it does my side of the visiting pretty thoroughly.

Write to me right now, please.

I want to hear from you.

Our New Office Building.

Send for the Old Trusty Catalog.

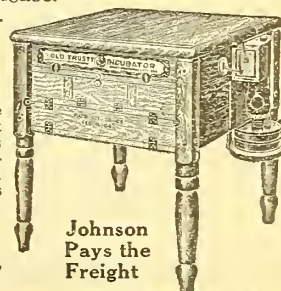

I want to tell you about the 1907 Old Trusty catalog. It is a "square from the shoulder" proposition on the poultry question. I wrote it to help poultry raisers out of trouble instead of into trouble. It tells how to get money out of poultry raising as well as how best to put some money into the business. It contains over 200 illustrations, most of which are photographs. If you want the book send me your name and address. It's easily worth \$1.00, but is free to any one who loves chickens and wants to know more about them.

Write to me personally. Address your letter this way:

AMERICAN STANDARD OF PERFECTION

OFFICIAL GUIDE TO POULTRY CULTURE
Latest Revised Edition (1906)
304 PAGES; 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
WORK ON THE TECHNICAL POINTS OF
STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
MORE THAN THREE THOUSAND DOLLARS

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

a. A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.

b. The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.

c. Instructions to judges and the official "cuts for defects"—invaluable information for every exhibitor who wishes to be successful.

d. The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world's best poultry artists, and were revised and approved by members of the A. P. A. at a four-days' session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

Birds from my yards won again last season the ribbons for my customers at many prominent shows. My Kansas City record is five 1sts, five 2ds and three specials. If you are looking for an extra good breeding or high scoring bird to complete your exhibit, I can please you. Score card with every bird.

JULIUS BACHMAN

Kansas City, Missouri

Sure Hatch Incubators

Have the Highest Hatching Record

and the lowest selling prices. They will hatch chicks for you cheaper and better than hens, or other incubators.

The Sure Hatch runs itself and pays for itself, or we take it back at our expense. Guaranteed for 5 years and made to last a lifetime.

You can set it any place where a hen might be housed. Hatches when you "set" it, and you "set" it when you are ready, summer or winter.

No trouble to have "early hatched" chickens, if you use a Sure Hatch. Used successfully and most highly recommended by more practical poultry raisers than any other incubator on earth, none excepted.

For ten years we have been making and selling the Sure Hatch, freight prepaid, for prices that put it in a class by itself.

Anybody can make a cheap incubator, but when it comes to delivering one that positively will hatch cheaper and better than hens, and is covered by a responsible guarantee that it will do its work year after year—that's a proposition that is not so easy.

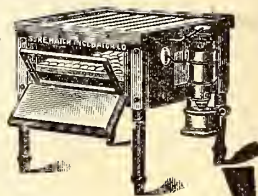

We do this very thing. We have the facilities and experience that make it possible.

We operate the greatest incubator

and brooder factory in the world. Our experimenting for improvement never stops. These facts enable us to turn out machines, strictly up-to-date—leaders always—imitations never.

Our customers are successful from the start, because we know how and what to tell them, that they may get the results that pay, without disappointments.

Our new 100-page illustrated Sure Hatch book tells all about our machines and low prices. Besides it is a very helpful poultry book. Write us today for one of these free books.

Sure Hatch Incubator Company
Box 6, Fremont, Neb., or Dept. 6, Indianapolis, Ind.

Note—July 1, 1906, our main office and factory were removed from Clay Center to Fremont, Neb.

MAKE GOOD MONEY IN POULTRY BUSINESS

Others are doing it. You can too with our big illustrated valuable book "Profitable Poultry." It tells how to breed, hatch, feed, grow and market—to make lots of money. Describes most wonderful poultry farm in the world. Contains plans for Brooder and Colony houses, yards and poultry farm. Tells all about the "Biddy" Incubator and Brooder, proves and guarantees it to be the very best; all about our 32 kinds of profitable fowls; quotes low prices on birds, eggs, incubators and Brooders and everything for poultry. It starts you on the right road to success in poultry. Mailed for 4c in postage.

BERRY'S POULTRY FARM, Box 74, Clarinda, Ia.

CORNELL

FIRE SALE

OF POULTRY AND BEE SUPPLIES

Send for list or come and save 25 to 50 per cent on slightly damaged Cornell Incubators, Mann Bone Cutters, Poultry and Bee Supplies. H. M. ARND, Proprietor of York Honey and Bee Supply Company, 191 E. Superior Street, Chicago, Ill. Telephone, North 1559

A NEW DEPARTURE IN INCUBATORS

It takes a lot of grit and well grounded conviction to go exactly opposite to long established theories, but we have done that very thing in The Handy Hatcher—we have successfully done what all other incubator builders have said would be fatal to the germs in the eggs. In our

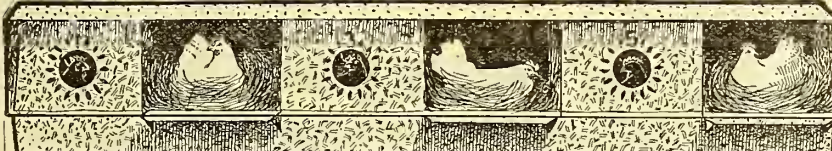

NEW APPLICATION OF NATURE'S METHOD OF INCUBATION

we go counter to all these old theories, but results have proven that the theories were wrong and our convictions were right. The very thing that is rigidly avoided in all other machines becomes the strong feature of our incubator. You'll want to know how and why. Write today—free catalog describes this wonderful invention, which becomes at once the safest, surest, simplest, most perfect hatching device ever invented—the machine everyone can use successfully.

HANDY HATCHER CO.,

Box A

ROSSVILLE, ILL.

A NEW NEST FOR SITTERS LAYERS AND GENERAL USE

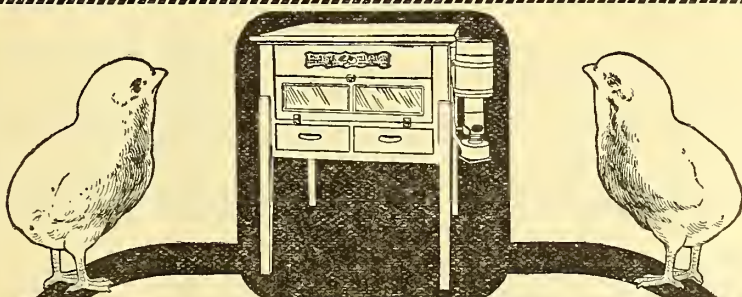

Patented Aug. 13, 1906. Other Patents Pending.

Illustration shows full view of the KNUDSON GALVANIZED IRON NEST built to last a lifetime. Attached by hanging on two or more nail heads. These nests can be used for sitters or layers. Door perch lifts up to enclose sitting hen and keeps out vermin. For layers, door perch is let down and closed at night. Can be put up end to end or one above another, 2 in. apart for easy cleaning. Convenient, lice proof, vermin proof. 6 nests cleaned as easy as one. All successful poultry raisers are buying them. Write for prices and booklet.

Box A10,

Everest, Kans.

CHICKS THAT LIVE

and grow to healthy young fowls. That's the kind the PURDUE Incubator hatches. No other incubator hatches as strong, healthy, lively chicks. It is not a theory incubator. It is the result of scientific experiment backed by years of practical experience. Its inventor, Mr. Charles E. Coffin, first got the idea while a student at Purdue University and the Indiana State Experiment Station. The Purdue Incubator stands approved by those institutions. If you want the best made, the most practical, the scientifically perfect incubator—a machine built to hatch—get

THE PURDUE INCUBATOR

Here are a few of its strong points: —Extra thick walls packed thoroughly with felt, the most expensive but the most perfect heat and cold non-conductor known. —Doors with double jambs, double glass with extra wide dead air space. —Lamp with a water cooled and air cooled burner. —Specially constructed three cylinder heater insuring even heat in all parts of egg chamber down to 1/2 degree variation. —Removable Diffusion diaphragm, 1/2 inches above top of eggs, guaranteeing even distribution of heat. —Ventilation and moisture under perfect control at all times. —Special Nursery drawer preventing injury to, and insuring high percentage of strong, perfect chicks.

Don't buy until you have seen our catalogue—with full description of construction—sent free for the asking. Write to-day.

The Interstate Incubator Co., 101 S. Capitol Ave., Indianapolis, Ind.

The Purdue Brooders are as scientifically perfect as the Purdue Incubators.

EVERYTHING FOR THE FOWL FAMILY

We appreciate the fact that the practical poultryman and the farmer who keeps a few hens are always anxious to increase their profits, and want the best foods and appliances they can get to do that. For over sixteen years we have been handling poultry supplies. We have built our business on the theory that the best is none too good, but that it always pays to sell the best. Our business has grown bigger every year—tangible evidence that we supply high grade goods at reasonable prices, that we deal fair and square, and that our patrons know the advantages of buying everything they need from one house. You will, too, when you get your first order from us. Our catalogue illustrates and describes an immense line of

POULTRY SUPPLIES

as Cut Alfalfa, Clover Hay, Electric Poultry Food, Mixed Grains, Chick Foods, Crushed Oyster Shells, Beef Scraps, Bone and Meat Preparations, Animal Meal, Blood Meal, Ground Charcoal, Grits of all kinds, Egg and Stock Foods, Remedies, Condition Powders, Lice Killers, Insect Extremators, Spray Pumps, Leg Bands, Chicken Markers, Caponizing Instruments, Thermometers, Egg Testers, Lamps, Nest Eggs, Nests, Egg Boxes and Baskets, Drinking Fountains, Pigeon Supplies, Feed Pans, Clover Cutters, Root Cutters, Green Bone Cutters, Incubators and Brooders, Poultry Houses, etc.—there's nothing you need that we don't have, and our catalogue will be worth money to you. Write for it.

IWAN POST HOLE AND WELL AUGER

Best in the world for fence and telephone post holes, wells, and all earth boring. Makes hole smoothly and quickly, empties easily and is very durable. Three full turns fills it with earth. Cost is special price to inch. Ask hardware dealers. Our book "Easy Digging" free. **IWAN BROS., Dept., F. Streator, Ill.**

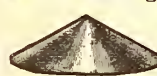

SOME POINTS OF DIFFERENCE

If we could explain in this advertisement every point of difference found in The

The Open Circular Self-Ventilating Nest

new catalog, you wouldn't need another word to convince you that here at last is the ideal hatching machine. We'd like to explain the how and why of the open circular self-ventilating nest, with its soft, downy cushion—the greatest triumph of modern incubator invention—which has entirely revolutionized old theories and exploded the logic of old methods of incubation. The con-

The Conical Deflector

ical deflector—a simple device which insures even heat in every portion of the egg chamber and together with other exclusive new features gives us the strongest, brightest, best chicks you ever saw. Climate nor altitude have no effect on The New Method. Wouldn't you like to know more about it? Write today for new catalog—it's free.

THE NEW METHOD INCUBATOR CO.,
150 W. Main St., Morrow, Ohio.

**THAT
MAKE
THE
NEW
METHOD
BETTER**

**Bradley Incubator**

SOOT-PROOF · SMOKE-PROOF · DAMP-PROOF

Three Essentials

that help to account for the big Bradley hatches. Even if the lamp should smoke, it cannot reach the egg chamber. The heater can be made fresh and clean every hatch, no chance for soot accumulations to cause smoke and death dealing fumes. Hatcher can be taken apart, cleaned and put together again in five minutes. Superior lining and packing between walls gives the Bradley the most perfectly protected chamber of any incubator on the market.

Regulation So Perfect it Will Run Night After Night Without Varying a Single Degree From 103 Degrees.

In the all-important matter of turning the eggs in the tray the Bradley is not even approached by any other incubator. Eggs should never under any circumstances be handled by hand during the hatching period. The Bradley turns every egg in the tray in one second. No trouble at all and you place eggs in any position wanted, half turn, clear over, turned slightly, etc., and when chicks hatch out they drop into an ideal nursery tray until removed to the brooder. **We guarantee satisfaction or your money back.**

Don't buy an incubator until you have seen the Bradley catalog and know the Bradley features. It will show you plainly why the Bradley is superior to other incubators.

Write for Catalogue A. Ready for mailing Dec. 1st. Mention this paper ADDRESS

Eggs**

1882**THE RELIABLE RECORD
OF 25 YEARS SUCCESS****1907**

For twenty-five years the **Reliable Incubator** has been in the field as an artificial hatcher. From the start it has given splendid results, and maintained its place in popular favor during all these years. As a result of our twenty-five years experience in incubator building the **Reliable** at its Silver Jubilee today, is the standard of excellence in incubator construction.

If you are thinking of buying incubators or brooders just send for the **Reliable 1907 Silver Jubilee Catalog.**

**SHIPMENTS MADE
SAME DAY
AS ORDERED**

It's a handsome book of 136 pages and fully describes this peerless incubator. It's free, postpaid. A postal will do.

It explains the special features which make **Reliable** incubators famous as hatchers the world over.

It explains the double heating system, shows how it preserves perfectly even temperature and how it is impossible for draughts and hot spots to occur in a **Reliable**.

It shows the system of ventilation employed and why gases and impure air cannot collect in the egg chamber.

It explains in detail **Why The Reliable Excels.**

We do not claim to make the only incubator that will hatch out chickens, but we do claim our machines are made upon practical lines—that they are successful hatchers—and we guarantee them.

The best of skill, workmanship and material goes into every machine that we make.

We have the largest and best equipped incubator factory in the world, our workmen are experts and the **Reliable** is built right all the way

through. It is strongly put together, will not warp and with ordinary care will last a life time.

Reliable incubators are sold under the strongest possible guarantee. They are simple, practical and economical and can be operated on one-third less oil than any other.

If you want a good incubator get the **Reliable**. This year, 1907, is our Silver Jubilee. On its twenty-fifth birthday the **Reliable Incubator** is at the head of the class. It is there because it has earned the right to be by fulfilling the claims made for it as a high per cent hatcher during all these twenty-five years.

It is a leader because it deserves to be. It does good work. It can always be depended upon, it is perfectly reliable. Don't take chances when you can get a **Reliable** for the same money with a record of twenty-five years practical success back of it.

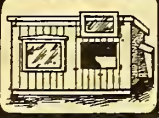

Write today for the Silver Jubilee Catalog. Remember it is absolutely free. Orders filled the same day they are received. Also ask for prices on pure-bred poultry and eggs for hatching from the famous **Reliable Poultry Farm.**

NO THERMOMETER NEEDED

Yes! We have so perfect a Regulator on the

AUTOMATIC BUCKEYE INCUBATOR

that you need no thermometer in its operation

ALL METAL—ABSOLUTELY FIREPROOF

We set the Regulator and it needs no re-adjusting at anytime and can't get disarranged or wear out. It may be adapted to any kind of fuel and uses very little of it: Because we have ten times the ordinary heating surface. Don't heat the water hotter than the Egg Chambers and have the entire machine surrounded by a perfect Dead Air Space preventing radiation or change from outside influences.

It can't be overheated no matter how careless you may be. It is a continuous batcher simply because each Egg Chamber is a Separate Incubator. Moisture and Ventilation are automatic and the temperature of every cubic inch of the interior of the Egg Chamber is the same all the time.

It will batch more and healthier chicks than any other Incubator, simply because of its

immunity from chill or overheat and because we maintain at all times precisely nature's conditions of temperature, moisture and pure, fresh air.

Pretty broad claim this? Well! we guarantee it for 5 years. If you want to save Money, Time and Worry and make poultry raising both profitable and pleasureable—Send for our FREE CATALOG and let us tell you why it is all and more than we claim above. How

We sell it on the INSTALLMENT PLAN

and what guarantee we give that you will get all and more than we have led you to expect.

DELVENTHAL'S BUFF ROCKS

Won at Missouri State Show, including special color male, special shaped female, in one of the strongest classes of Buff Rocks ever shown in the state. They will win for you.

E. L. DELVENTHAL, Care Citizens Bank, Warrenton, Mo.

A Warning! To those who are infringing our patents on The Acme Compound Wafer Thermostat

We say to you, BEWARE. From this on we propose to vigorously prosecute every wafer manufacturer and others who infringe our rights. As the user of an infringed article is equally liable with those who make or sell it, we feel it our duty to acquaint purchasers of incubators and brooders how to avoid being made innocent parties to the infringement of our rights by enabling them how to tell the difference between an Acme Wafer and an infringement—an imitation.

PATENT LABEL

Fig. 1.

All that is necessary to insure getting the genuine Acme Compound Wafer is to see that it bears our Patent Label. This you will find stamped on the copper disc around the cup shank and it reads as follows: "Patented 1903-U. S. June 23-Canada May 5." (See cut.)

This mark is about the only thing the unscrupulous imitators dare not copy. Uncle Sam is back of it. That's the reason.

It will pay you to look for this label and particularly to insist on having the genuine Acme, because so much of the success you have with your machines depends on the wafer thermostat you use.

To further convince you that you ought to get the genuine we offer the reasons below and in addition we want to say that none of the imitators possess the honest, intrinsic merits of the genuine Acme simply because there is such a wide difference in the construction.

Two disc wafers may be made from the same sheet of metal and yet be widely different in their actions as thermostats.

Fig. 2.

The points wherein the Acme differs from its imitators and which account for its great superiority are in the quality of material, the patented valve and filler, the hollow stem connection between chambers, the manner in which it is filled, double roll lock seams and its perfect mechanical construction throughout.

For instance, every piece is made by special machinery insuring the highest degree of accuracy and uniformity.

After the discs are placed together and the double roll lock seam is turned on, the groove thus formed is reinforced by being filled with solder forming a connection that is absolutely perfect and everlasting.

The contraction and expansion of a million times will make no appreciable effect on this seam.

How about the imitations? They are not made to last—merely to sell. But there's more important things about

Manufactured Only By H. M. SHEER CO., 183 Hampshire St., Quincy, Ill.

The Largest Manufacturers of Incubator and Brooder Supplies in the World.

the genuine Acme which are absent from the imitations, and which the buyer has no way of distinguishing.

One is the method of filling. To insure a perfect, accurate and sensitive wafer, every particle of air must be forced out of the disc chambers when the the operating fluid is put in.

To do this requires a special automatic pump which not only extracts all the air and closes the valve, but puts in a measured

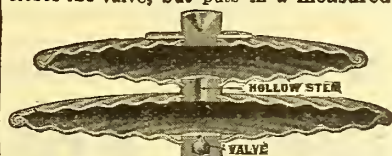

Fig. 3.

amount (the right quantity) of volatile fluid at the same operation.

The imitations having no valve are necessarily filled in a very crude manner, being sealed by solder. It is physically impossible to make a perfect vacuum this way.

Our method is made possible by our patented valve (not found on any others). It enables us to fill the wafer to its full capacity; to use the highest test expansion fluid; to expel all the air; to seal the wafer so it will retain all its vital energy and complete a wafer that is absolutely perfect.

Another very important point is our hollow stem connection between each disc chamber. (See figure 3.) In the Acme this insures equal expansion regardless of the heat on either disc. The upper disc of other wafers not having this hollow connection (See Fig. 4) being exposed to the direct radiation of heat from the tank or heater in the egg chamber, is forced to expand to its full limit before the lower disc which is shielded from radiation by the upper disc, has hardly started to expand.

Fig. 4.

To equalize this pressure we devised the hollow connection between the two disc chambers. (See fig. 3.) which is not found in others because our patents cover this point. In the imitations the result is different. The upper disc having no connection with the lower disc acts separately as shown in Fig. 4. Hence irregular thermostatic action is bound to occur which means irregular temperature in the egg chamber. Before buying an incubator see that it is equipped with the genuine Acme Wafer, insist on it. There are many other things of advantage you ought to know about. They are fully explained and illustrated in our Catalog free for the asking.

We will gladly mail you a copy on request. It's a book you will value highly. A postal brings it.

In the meantime don't forget how to tell the genuine Acme Compound Wafer from the imitation. Look for the patent label.

WHY Don't You**Build Your Own INCUBATORS**

And Brooders? Thousands Are Doing It. Just Send for Our

FREE PLANS

And See How Easy and Simple They Are. We Furnish All Parts Such As Lamp, Regulator, Tank, Legs, Doors, Hardware, Etc.

**HOW IT IS DONE**

The first thing that occurs to many who read our advertisements, is that it is impossible for them to build their own machines.

This is a mistake.

If it were not we would not be in business. Our business would not have grown to be the largest of its kind in the world. Our success depends upon the success of our customer. Over eighteen thousand people became interested in our plans last year.

That is certainly good proof that anyone can build their own machines with our plans and fixtures.

Why not you?

You can, and we'll tell you why.

We have worked and studied on these plans and fixtures until we have made them so simple and easy that a boy 12 years old can follow them successfully.

Now we don't want you to even take our word for this. We want you to decide the matter yourself.

All we ask is the privilege of placing in your

hands at our expense a copy of our Free Catalog and Book of Plans.

If these fail to convince you, then we have nothing more to say and you'll be nothing more out.

We want you to see with your own eyes how clearly every step of the work is pictured out and described.

We want you to see how easy it is for you to build a high-grade, modern Incubator or Brooder, having many exclusive features (all in favor of the inexperienced operator) which are not to be found on any other machines made.

We want you to see how you can make a machine for less money than the same could be bought for if it were on the market.

If you are going to buy a ready made machine, don't do it until you have investigated these plans. We furnish all the parts such as lamp, regulator, tank, legs, doors, hardware, etc., not possible for you to make, at a special low cost.

If You Have An Incubator

or Brooder, it will pay you to send for our Catalog and plans. It describes our latest improved

Acme Automatic Lamp and Acme Compound Wafer Regulator which can be attached to any make of incubators and brooders, and which will save you one-half the oil and labor and all the annoyance so common with the ordinary lamps and regulators.

Here's some of the reasons:

Lamp holds over one gallon; top lifts off like bucket cover making it easy to fill. No funnel needed; no spilling or wasting of oil; safely filled when operating; can't be upset; no danger of fire.

Automatic valve keeps oil always same height on wick insuring uniform flame, steady heat. Combined damper and flame regulation shuts off oil consumption when heat is not needed.

Acme Mineral Fibre Wicks do not burn or char—require no trimming. Acme Burners are air cooled—can't over-heat. No danger of explosion or fire. No smoke, no soot, no odor;

they can be operated in any part of the house.

Acme Compound Wafer Regulators are sensitive and accurate to a fraction of a degree, also positive in their action; require but one adjustment, flame regulation does the rest.

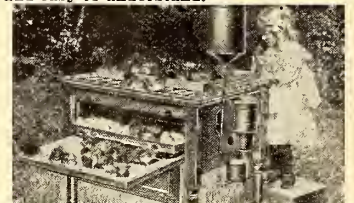

Acme Lamps and Regulator are made to fit any machine. Sold singly or together. You ought to get this free catalog and read all the reasons why it will pay you to put on this lamp and regulator on your old machines.

If you have no machines don't fail to send for our catalog and plans and get the right start. Read this letter.

H. M. Sheer Co., Quincy, Ill.

June 28, '06

Gentlemen:—I had no trouble in following your plans and instructions; they are so simple and easy to understand.

I have made four hatches and had fine success.
1st Hatch set 220 eggs.....got 195 chicks
2nd " " 200 " tested out 40 " 195 "
3rd " " 210 " " 39 " 169 "
4th " " 200 chick, 6 duck, tested out 50, got 145 chicks and 5 ducks. Incubator runs itself.

The World's Best W. Wyandottes

First Prize Cockerel at Indianapolis, 1906

The record of 1906 proves our claim: Cincinnati, Ohio, January 16 to 20, great A. P. A. Show, a very large class. T. E. Orr, judge, 1st cockerel, 1st hen, 4th cock, 5th pullet, 3d pen, five specials, best cock, cockerel, hen, pullet, best display. February 4th to 10th, at Indianapolis, Ind., one of the largest shows ever held in that city. W. C. Pierce, judge, we won 1st, 2d cocks, 1st, 2d ckl., 1st, 2d hens, 1st, 2d pullets, 2d, 3d pens, three silver cup specials. Indiana State Fair, September 10 to 14, Shaw, judge; 1st, 2d, 3d cocks, 1st hen, 2d cockerel, 1st pen. Nashville, Tenn., State Fair, October 8 to 14, F. J. Marshall, judge, a hot show, 253 competing, we won 1st, 3d cock, 1st, 2d, 3d hens, 1st, 2d cockerels, 1st, 3d pullets, 1st, 2d breeding pens. These winnings are not stale and moss covered, they are like the birds we are offering.

Up-To-Date And Are In Style

We have 1500 birds to sell; cocks, cockerels, hens and pullets. Quality away up. We will not show any more this winter, so you can feel safe to purchase your winners of us.

They Win For Us, They Will Win For You

Send for catalogue with fine picture, painted from life of a pair of our winners, which we will mail you for 10 cents in stamps. Every breeder of White Wyandottes should have one. It gives pointers how to fit birds for the show room, feeding and caring for white birds. Please write us.

J. C. Fishel & Son, Box J, Hope, Ind.

Just What The Poultry World Has Been Waiting For

AN INCUBATOR IN WHICH THE HEAT IS APPLIED TO THE TOP OF THE EGGS

This is Nature's way, and there is no other natural way. The eggs are surrounded by fresh air, moderately, correctly warmed. No hot box egg chamber; no burned out air; no feverish, thirsty chicks; no subsequent chills and bowel trouble. Largest hatches, much the hardest chicks.

You want to know about the Incubator that supplies every condition that Nature supplies, and in the way that Nature supplies it.

You want to use the most convenient machine yet devised. Ours is a pleasure to operate. With new self-supporting egg drawer, you never lift or carry a tray; you never spill an egg. Our thermometer arrangement is the handiest and best ever made.

You want to own the best constructed, most durable and finest appearing incubator made. It will never wear out. It embodies the best points of all classes of incubators in addition to its own exclusive features. The prices are right. The machine is guaranteed. You take no risk.

Chambers Incubator Co. - Shelbyville, Indiana

Write for our Incubator Book. It is honestly devoted to setting forth the facts and principles of incubation. Free if you mention AMERICAN POULTRY JOURNAL.

WHITE PLYMOUTH ROCKS

**The Most Beautiful and Popular Variety of Fowls in America—
Why Their Popularity, Etc.—Large Prices Paid For
Choice Specimens of This Variety.**

Written for American Poultry Journal by U. R. Fishel, Hope, Indiana.

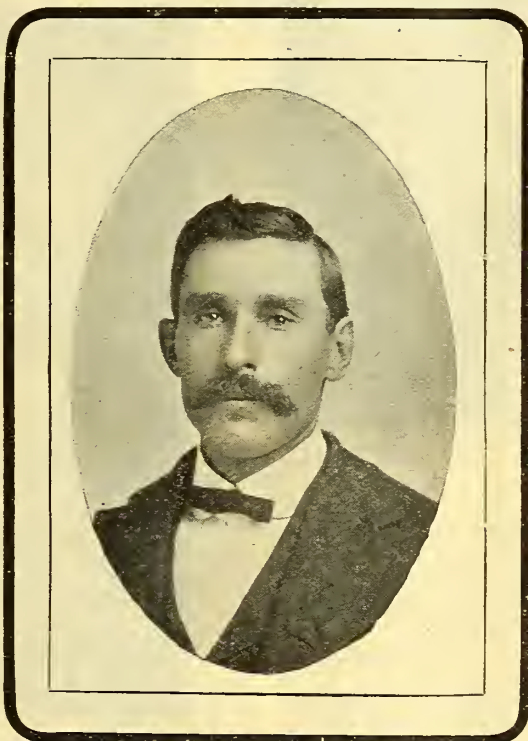

Having bred fancy poultry for thirty years and during that time having bred almost every variety known, I am often asked why I prefer the White Plymouth Rock to any other variety. In all my years of business life I have believed in the old and true saying, "The best is always the cheapest," and I see no reason why this should not hold good in poultry as well as anything else. When the White Plymouth Rock was introduced and I saw the first flock of them I realized at once that they were the fowl every one interested in poultry should breed and especially so if in the poultry business for profit as well as pleasure. Their beautiful clear white plumage proves to every one their purity, while the rich yellow shank convinces you of the excellent table quality of the breed. Their rich red combs and face denote strength and hardiness, while the full, broad, round breast and broad back with that length of body convinces every one that the White Plymouth Rock of today is bred for meat and eggs as well as beauty and hardiness. No breed of fowls has won the universal admiration of the fancy poultryman, the farmer or the owner of the suburban home as has the White Plymouth Rock. Never in the history of the poultry business has a breed of fowls demanded such prices as the White Plymouth Rock. A thousand-dollar hen has always been an impossibility until a White Rock was produced. Five and eight hundred dollar male birds were unheard of until these prices were realized for specimens of the White Plymouth Rock variety. Never has it been possible for one breeder to sell annually over 12,000 birds of one single variety until White Plymouth Rocks were introduced. Not only has this variety been bred for fancy points, but the utility part of the breed has been retained and carefully looked after until today the breed ranks first as egg producers, while as a market fowl there is no breed to compare with them. Their superiority as both a market fowl and egg producer stands out so far above any other variety that comment is unnecessary. The largest and most successful poultry plants (either fancy or market) in

the United States are stocked with White Plymouth Rocks. When the United States government wanted fowls with which to stock their experimental farm they selected the White Plymouth Rocks. Wherever you place this grand breed of fowls they seem at home and fill the place exactly. If the farmer wants a flock of fowls that will pay him better than anything else on the farm he selects the White Plymouth Rocks. Why?

Because they are good foragers, the best of egg producers, always laying when eggs are the highest. I have never seen any farmer with a flock of well bred White Plymouth Rocks but what the farmer was piling money up in the bank and smiling to himself every time the good wife would send a bushel basket of eggs to town at 30 cents a dozen.

The owner of the egg farm that has his plant stocked with White Plymouth Rocks is always telling of the wonderful egg yield he is getting and the excellent prices he realizes for his White Rock capons or roasters. The fancy poultry breeder that is making a specialty of this grand breed of fowls is always found well pleased with his year's business, never having stock enough to fill his orders and always realizing better prices for his stock than the breeders of other varieties. The readers of the American Poultry Journal no doubt will ask why this is so. It is all summed up in the short sentence, because the White Plymouth Rock fowl is "the most beautiful and most profitable fowl" there is.

I remember when the U. R. Fishel White Plymouth Rocks were first introduced, people realized that I was striving hard to give them a fancy fowl that was also a business fowl. My combining both beauty and utility in my strain of White Plymouth Rocks has convinced the poultrymen the world over that it pays to breed a variety of fowls that can fill any place where a chicken is wanted. I do not believe any other breed of poultry has been exported to as many foreign countries as has the U. R. Fishel White Plymouth Rock. In the last six years I have received orders from and shipped fowls to Eng-

U. R. FISHEL, HOPE, IND.

land, France, Australia, New Zealand, Japan, India, Java Islands, South Africa, South America, Germany, Cuba, Mexico and Alaska. No matter where shipped they thrive and give the very best of results. The United States government selecting the U. R. Fishel White Plymouth Rocks with which to stock their experimental farm surely convinces every one of the superior quality of this noted strain. As exhibition fowls few poultry exhibitions the world over but what the winning White Plymouth Rocks are direct from or descendants of "The Best in the World," U. R. Fishel White Rocks. There is no need of any one making a failure of the poultry business if you will breed a variety of fowls people want; therefore, why fail? A word to the wise is sufficient.

U. R. Fishel.

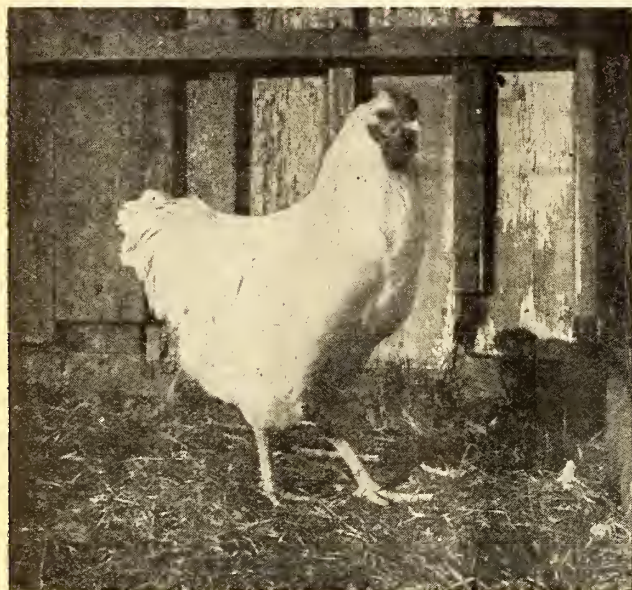

THE MATING OF THE BREEDS.

Prominent Defects As Found in the Show Specimens of the Present Day—What They Are and Why They Should Be Avoided by the Breeder and Fancier Alike—How to Properly Mate to Secure the Desired Results and to Constantly Improve the Breed—The Basic Principles of Light Brahma Mating and Breeding Clearly Defined by John Rumbold.

Paper No. 1—The Light Brahma.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

It has been said that there comes to every fancier of Standard-bred poultry a desire, some time in his life, to breed the Light Brahma.

One of Hand's handsome strain White Wyandottes. Bred and owned by Mrs. W. H. Hand, White Hall, Ill.

For years the Light Brahma represented the highest type of domestic poultry. They were the pride of American and English fanciers alike. Their stately carriage, quiet and easy repose, great size, the pure white and pure black of plumage contrasting sharply, captivated all lovers of the beautiful. Not only this—this Light Brahma was a wonderfully productive egg producer, while as a roaster was far and away the best obtainable.

For many years they made up the largest and most important classes in our poultry shows. They did not seem to suffer because of the Cochins form, which for years amounted to a craze.

Today but few comparatively are seen in the show room, and the number of fanciers breeding them is small, indeed, when we consider the past.

Why is this true? Why has this stately, beautiful and useful fowl fallen from its once high position? It is not a pleasant task to truly answer these questions. The truth is, that the Light Brahma which is today recognized in the show room has been so thoroughly Cochinated as to be, as a

general rule, a fowl lacking in usefulness as an egg producer and inferior as a market fowl to the Brahma of the past and to several other breeds and varieties of Standard-bred fowls.

Then, too, the American breeds and varieties have swept over and away all the Asiatic breeds as utility fowls. These American breeds and varieties have not only stepped into

First Pullet at Missouri State Show, 1905; score 9614. Bred and exhibited by Bridgeman & York, Forest City, Mo.

first place as market fowls and egg producers, but are today the most popular exhibition stock.

The Light Brahma is not to be lost. So long as men admire the beautiful and the useful this breed of fowls will retain a prominent place. The American Light Brahma Club is not unmindful of the needs of this fowl and fully recognizes the fact that as soon as they are returned to their true

Prize winning Hen at Kansas State Show. Bred, exhibited and owned by Bridgeman & York, Forest City, Mo.

form—the distinct Brahma form—there will be a grand revival in their favor. The rounded, contracted, thoroughly Cochins form and feathering must be discarded. Length of back and body must be restored. This demand is imperative. Today hundreds of earnest men and women are engaged in the work of bringing the Light Brahma back to

its own. When this is done the breed will take its proper and deserved place, which means that it will be in the very front rank of useful poultry as well as a leader once again in the exhibition halls.

Proper Mating.

Mr. John Rumbold, secretary-treasurer of the American Light Brahma Club, who is in very close touch with the aims of the leaders in the movement to upbuild this fowl, tells in the following how to properly mate and handle the Light Brahma. It is gospel truth from one well qualified to preach. Mr. Rumbold says:

"Since the advent of the Asiatics in the 'forties' the breeding of poultry has taken on proportions that would astonish the patriarchs of the 'hen fever' could they find their way back to earth again. Prior to the coming of the Asiatics little attention was paid to the breeding of what is known as fancy poultry in the United States. About all the thoroughbreds were pit games, and every flock in the part of the country where I was raised showed unmistakable evidence of game blood, the Black Breasted Reds predominating. We will not stop to inquire into the origin of the Light Brahmas to any great extent, as that is not so necessary to the proper mating of the breed as it is to know the origin or foundation blood of many of the popular breeds of the day, which have so many breeds in their make-up, some strains of which carry blood that fails to 'nick' well with the foundation blood of other strains. Light Brahmas are of

ent sections of the country. The east has bred almost exclusively for color, ignoring shape entirely too much. That eastern birds are magnificent in color there is no denying, and that western birds in many instances are of better Brahma type is also just as well known. The old standard—the one in force before the present one—is responsible for much harm done the breed. The word 'medium' in several sections gave license to both judges and breeders until legs, necks and bodies became so shortened that the breed became more Cochins than Brahmas in type, save in back, and that section often showed the convex backs of the Cochins. The present Standard is a long advance over the one it superseded. And if judges will 'hew to line,' a wonderful improvement will be apparent in the birds on exhibition in the next five years. The wording of the new Standard in sections of legs, neck, back and body must not be lost sight of by the present day breeder and fancier; the changing of these sections from medium to rather long means a world of improvement in the future Brahma; it is a change I have worked for for thirty years. With the exception of wings in females the present Standard gives a perfect Brahma; that section allowing so much white in primaries is radically wrong. The Standard should call for at least the best that has been produced, and thousands of females are bred every year far in advance of the standard for wings. What is the best type of the Light Brahmas? That breeders differ, or breed to different type, we all know.

A row of colony houses on Fair Lawn Poultry Yards. Wm. Miller, prop., Box 1, Crescent, St. Louis Co., Mo.

Chinese blood, no matter what interested breeders or writers have said to the contrary. It is a fact that we older breeders and fanciers are aware that many breeders of the forties and fifties gave wonderful names to their fowls and told many fairy stories of their ancestry. Back in the fifties I remember the 'Chittagongs,' as they were bred by my father and others in Maryland, and it is undeniable that, with the exception of having single combs, they were identical with the Brahmas of today, and many of them, if they could be capped with a pea comb, would put to shame some of the fowls that are masquerading as Light Brahmas.

"For thirty-six years I have bred this noble fowl, beginning when many of the present-day breeders were unborn. In the early seventies very many of the chicks were hatched with single combs, showing they were descended in a measure from the old Gray Shanghais, the fowls that were bred first by Geo. P. Burnham, Melrose, Mass., in the year 1849, and which were called Burrampooters by Dr. Bennett, and which was later called Brahmas. The so-called Indian origin of the Brahmas is all fol de rol—it has not a leg to stand on. That there were different importations brought into the country is well known, and that these different importations were bred together is also a fact; and this, I believe, in a measure is the reason there is a difference in types in differ-

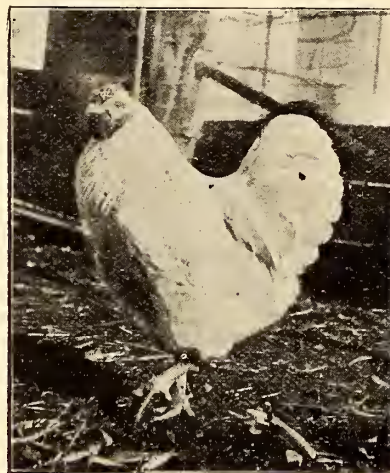

ent sections of the country. The east has bred almost exclusively for color, ignoring shape entirely too much. That eastern birds are magnificent in color there is no denying, and that western birds in many instances are of better Brahma type is also just as well known. The old standard—the one in force before the present one—is responsible for much harm done the breed. The word 'medium' in several sections gave license to both judges and breeders until legs, necks and bodies became so shortened that the breed became more Cochins than Brahmas in type, save in back, and that section often showed the convex backs of the Cochins. The present Standard is a long advance over the one it superseded. And if judges will 'hew to line,' a wonderful improvement will be apparent in the birds on exhibition in the next five years. The wording of the new Standard in sections of legs, neck, back and body must not be lost sight of by the present day breeder and fancier; the changing of these sections from medium to rather long means a world of improvement in the future Brahma; it is a change I have worked for for thirty years. With the exception of wings in females the present Standard gives a perfect Brahma; that section allowing so much white in primaries is radically wrong. The Standard should call for at least the best that has been produced, and thousands of females are bred every year far in advance of the standard for wings. What is the best type of the Light Brahmas? That breeders differ, or breed to different type, we all know.

"For correct type I cannot do better than to refer to the

Standard. In my opinion it is all that is to be desired. And birds approximating the requirements as there laid down must be selected if we are to have the highest type of the breed. It calls for such requirements in each section as best calculated to make an active fowl. Size in our breeding stock we must have. An under weight bird is not a fit representative to perpetuate the breed, and unless a late hatched bird—no matter how fine the color—send it to the butcher. An undersized bird won't attract attention. Brahmas are the largest breed we have, and breeders should see to it that they are kept so. Never select a short limbed male as a breeder. He should be up to or over Standard in weight. I have not found it advisable to depend on the females to give size; the male is as much responsible for size in the progeny as the female. And no matter how large the hens may be if the male is an undersized bird there is no reason to expect the chicks to be large. A male must be bright and active if he is to be a good stock getter; a fowl that is always looking for a pleasant spot to rest himself will be a disappointment to his owner when he rounds up the product of the season. He must be strong also in color. There is a certain waste in color generally. Some of the chicks may be darker than the parents, but taken as a whole they usually run a shade or two lighter. A strong colored bird is more attractive, especially so in the show room, where one weak in any section shows to a great disadvantage. And if we are to keep the strong color points we must select the birds we use as breeders especially strong in this regard. Then to sum up, our male bird must be a large, reasonably tall, long bodied bird, strong in color and with well feathered legs and toes. Active, on the alert and vigorous. Such a bird will, with females that are his equals, give a good account of himself.

"In females, size should never be disregarded. Like will produce like. Small hens, small chicks. A large male may help to some extent, but cannot do all to make up for this deficiency. Should always select hens somewhat over the average in length of body. They are usually the best layers in the flock; legs long enough to take them around

with leg feathering. Seems to be one most commonly reproduced faults of the breed. Shall we inbreed, line breed, out cross or how best mate our birds for best results in the progeny? The line breeding charts that are printed now and then may be of use to the ones who study them up, but not to the general breeder who has from one to five yards each season; consequently the small breeder cannot carry out the line breeding system as thus illustrated. I am not

WHITE WYANDOTTE.

One of Clement & Fike's six-months-old cockerels.

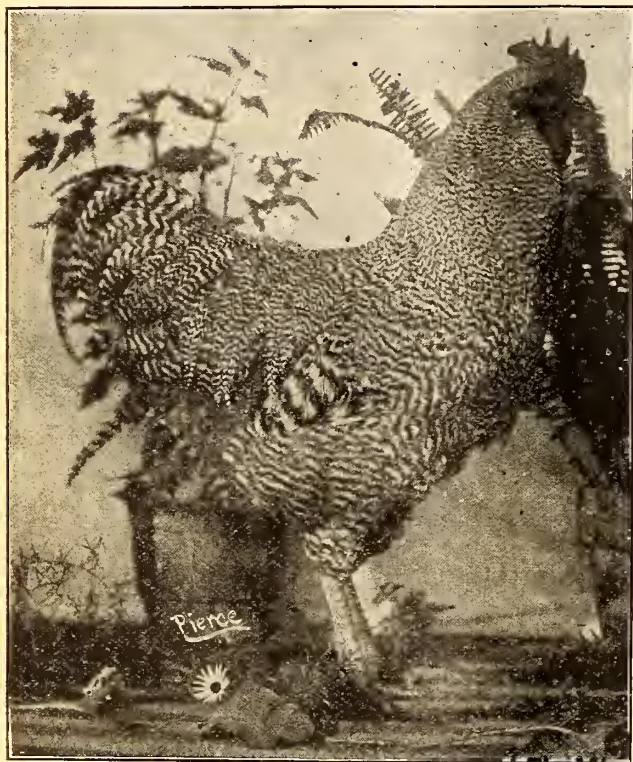

a believer in continued close inbreeding; a certain amount of inbreeding is advisable, but selections must be made with great care. Any noticeable fault will likely be reproduced in a greatly aggravated form; but one thing I can't advise—turning down related birds that are fine to make room for an inferior specimen of different strain; the related birds would likely produce better results. Some of the best birds I have ever raised have been from brothers and sisters mated together. Breeders are supposed to have the same end in view—all of them—when they are mating up their breeding pens. And that is producing Standard stock. Consequently all are more or less breeding along the same lines, and there is not the same probability and danger of unsatisfactory results at the present time as there was years ago. And again most breeders are buying birds whenever they find them suited to their wants, until almost every breeder's birds are more or less related. I would, to make it plain and short, breed from the best birds I can secure, whether near related or not, preferring a considerable of the same strain of blood in male and female. I question if inbreeding with careful selections has ever caused a flock of birds to deteriorate in size or stamina.

"Our selections of females for the breeding yard should be confined to hens that have been great layers, or pullets bred from them. Don't get ruffled—but the Brahmas are not the layers they once were; breeding for feather and away from the longer, more active type of bird has done the breed a grievous injury. It must be overcome by breeding from the hens that lay best. It can be done. Why not do it?

"For color matings the best is a male a shade or two darker than Standard to Standard color females, and the best females are those who have gone through an adult moult and have retained their color. Many hens lose in color after moulting; these should be discarded from the breeding pen under all circumstances.

"A very dark male mated to hens poor in color points or a light male to hens too dark for Standard requirements will often produce good results, but are not to be used when the first stated matings can be made. Extremes in color matings will not give general satisfactory results.

"After your selections are made get out and double the size of your breeding yards. If you are breeding only light Brahmas give each yard a run outside on stated days. It has as much to do with the fertility of the eggs as any one thing. Fowls, no matter how well mated, cannot do their best confined in small yards. It is against nature. And many failures have and will result from contracted yards. It makes hens lazy and incapable of caring for themselves when turned out after the hatching season is over."

BARRED PLYMOUTH ROCK.

at a lively gait when necessary; active, alert and always on the go. Color should be as described in the Standard save wing primaries; there we say black, with narrow lacing on lower web. That is the most handsome wing and is a long ways beyond the wing called for in the Standard. Legs must be heavily feathered; no half way business will do

HOW TO ADVERTISE.

What to Do and What Not to Do, in Order to Be a Successful Advertiser.

Written for American Poultry Journal by F. W. Mangelsdorf, Atchison, Kas.

Advertising may be defined as "The modern method of business getting." Since the days of town criers and sandwichmen, advertising has steadily grown to its present vast proportions. Today it is recognized as one of the most important features of modern commercialism.

The writer has given the subject of advertising considerable time and study, and trusts the beginner may find a few hints to be of practical value to him. To the uninitiated, the composition of an ad seems the embodiment of simplicity; the first attempt at advertising, however, will do much to destroy this optimistic opinion.

Does advertising pay? We refer you to the modern merchant princes, whose aggregate expenditures in placing their goods before the prospective buyer amount to millions of dollars annually. The most essential points to be considered in advertising may be summed up as follows: A careful selection of our advertising medium, an attractive ad constantly kept before the public, honesty and square dealing. Whether it is necessary for you to advertise depends entirely upon conditions. If you are depending entirely upon a local trade, or have contracts with the commission men to handle your entire production, advertising would be unnecessary. If, however, you intend to create a demand for eggs or stock in any or every part of the country, it is imperative that you advertise and do it thoroughly.

Demanding "fair" prices for your goods does not necessarily mean low prices, simply give the purchaser "value received." A "chicken" may be high-priced at a dollar, a thoroughly high-scoring fowl be a bargain at twenty-five. Your stock must merit the price asked. It would obviously be impossible to create a permanent demand for your goods, if deceit were practiced; such a procedure would ultimately result in failure.

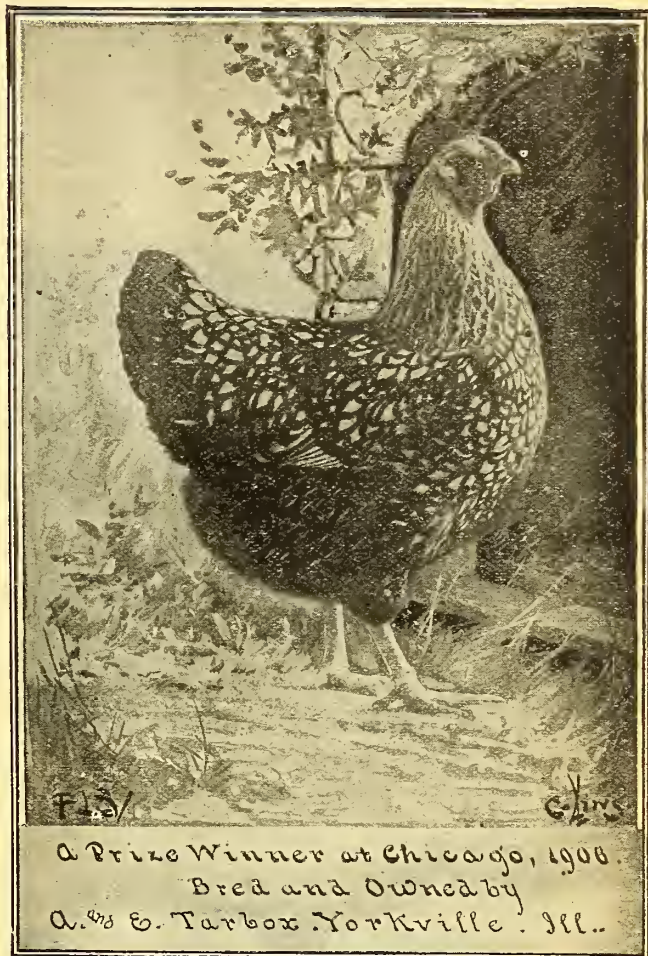

In the selection of a proper medium, good judgment and foresight must be used. Don't select the very cheapest form of advertising. Investigate, if possible, the size of the live circulation of your prospective medium. The poultry paper that has a large circulation is justified in demanding a correspondingly high advertising rate. In this connection, it might be well to add that the breeder you "handle" must influence you to some extent in the selection of a medium. The "farmers" and "utility" breeds could be advertised profitably in both the poultry and agricultural press, while in all likelihood, the fancy or ornamental breeds would interest the reader of a poultry paper almost exclusively. A plan that would aid you in making a satisfactory selection would be to place the same ad in several papers, giving each a fair and impartial test, retaining the one that proves most effective. Advertising rates in the monthly magazines are entirely too high for the average breeder to consider. The same amount of money spent with the poultry press would undoubtedly prove more remunerative. An added advantage would be, that you are reasonably certain every reader of a poultry journal is interested, to a greater or less degree, the fact of his being a subscriber is in itself significant.

Having determined upon the medium, the size of space to use, what to say, and when and how to say it, will next occupy your mind. By far the best method of securing desirable space is to contract annually with the publishers for a certain space that strikes your fancy. Selecting a favorable location gives your advertising the added advantage of prominence. By all means, use as large a space as business conditions will permit. Moderate means may compel you to be content with a breeder's card the first season. Enlarge your space as rapidly as business conditions justify. A half or full page is not too large a space for a successful breeder to utilize. The arrangement and composition of your advertising is necessarily a matter of importance. A confused jumble of "words, idle words," crowded into a given space, is worse than wasted. Don't attempt to crowd as much cold type as possible into your advertising in the belief that you are getting your "money's worth." Above all things avoid a crowded appearance. Even spacious advertisements occasionally contain entirely too many words. These particular ads, as a rule, are in small type, making a mass of "literature," which the average reader, unless extremely interested, will hesitate to wade through. Enlarge the type, condense the number of words, insert an

appropriate drawing or halftone cut, and note the resultant improvement. Let your words be concise and to the point, say what you want to say in an effective and convincing manner. No need of dwelling upon the scenic beauty of your "shady dell" farm—leave that to the poets. It is stock and prices we are interested in. Attractive, "catchy," large-typed head lines mean the battle half won.

"First catch the eye, then hold the attention" should be the substance of ad writing. An ad must not only contain the spice ingredient of "catchiness," but also the ring of sincerity, persuasiveness and "pulling power," as added virtues. Don't overwork the jocular method of advertising.

If you were engaged in a verbal business transaction, you would not be likely to indulge in excessive mirth. Apply the same principle to advertising that you would to actual business life. Absolute honesty, the Golden Rule variety, is as necessary in advertising as in business. If the quality

SILVER WYANDOTTE.

A prize-winning hen at Chicago, 1906. Bred and owned by A. & E. Tarbox, Yorkville, Ill.

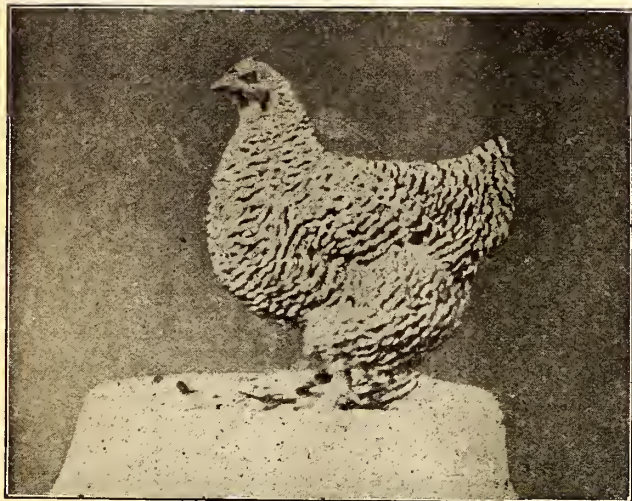

of your stock does not substantiate your claims, be assured your sins will find you out.

The value of cuts and illustrations in the "make-up" of an ad should not be underestimated. An appropriate drawing or neat halftone cut instantly attracts the reader's attention, while a spacious ad without an illustration may be unobserved. You will notice that by far the greater portion of advertisements occupying spaces of from one-fourth to a full page in the monthly magazines, are appropriately illustrated with "catchy" drawings or halftone cuts. The professional ad writer depends to a great extent upon the illustration for life and effect. Full page ads in recent magazines contained only ten to fifteen words, the space being almost entirely occupied by the illustration. This proves conclusively the confidence placed in an illustration for effect. Many an ad could be improved by being similarly enlivened. It would be of the greatest benefit to the beginner to study the methods of the modern ad writer. The work of these artists is almost as interesting to read as the space devoted to fiction. As a rule, the better class

of magazines contain the highest type of advertising, much more time and skill being spent upon these ads than upon those in the average newspaper.

That proper advertising is expensive, the experienced advertiser will admit. Many cheap forms of advertising are practically worthless. The money spent for good advertising will in nine cases out of ten be justified by results, unless the advertiser be at fault. Not every one has the ability to write a business bringing ad. If you are thus afflicted, consult the advertising manager of your medium, or the ad specialists. By all means avoid irregular or spasmodic advertising. Persistence and success are synonymous in advertising. Mark out a systematic course of advertising and adhere to it strictly. Every issue of the publication from January to December should contain your ad. Make it such a permanent feature of the paper that every reader will expect to find "Jones, the Rock Man's" ad in its accustomed place. You will notice that the advertisements of the successful breeders, manufacturers, etc., are in evidence the year round, even when their goods are out of season.

Every appearance of the paper should show a change in your ad. Even the best of ads become monotonous unless frequently changed. Later in the season, we occasionally see an "eggs for sale" ad that has been running without change since early spring. This is criminal carelessness in the matter of building up a business. Keep the name of

BARRED PLYMOUTH ROCK.

Third prize hen, Chicago, 1906. Owned by Edgar G. Simpson, Naperville, Ill.

your strain constantly before the buyer. Make the "gilt edge" strain the by-word for quality.

Don't be afraid to enter the competition at the poultry shows. Many people prefer to be "shown" to taking your word. If your stock is "the best in the world," the judges will back you up. A bunch of ribbons means future orders. If you are a beginner, don't expect one or two modest ads to accomplish wonderful results. Remember you have as competitors, old and grizzled veterans of the poultry business, men you must combat for every inch of patronage. It may take years of hard work and persistent advertising before fortune smiles upon your efforts. A satisfied customer is, of course, the best advertisement of your business, an asset, a valuable piece of property. You will, however, occasionally receive complaints even though you exercise the most conscientious business principles. The dissatisfied ones are usually incompetent, careless or ignorant. These should be kindly and indulgently treated; a proper explanation will usually right matters. The "chronic kicker" would complain if he received the best goods on the market as a gift. He is a pest to the business and should be courteously and firmly "handled without gloves."

Many Poultrymen are not alive to their opportunities; lack of advertising is keeping many otherwise promising breeders in the background. The poultry business is barely out of its infancy. Opportunities for the founding of a remunerative business or the development of an established one were never better. It has been demonstrated time and again that practically a certain way to increase the

returns of your business is by judicious advertising, backed up, of course, by the goods.

Now, why are so many poultrymen showing the white feather? Why this timidity to make an investment that yields certain dividends? We are simply not taking advantage of our opportunities. There are meritorious breeds of poultry that should occupy a prominent place in poultrydom, being kept in the background through lack of enterprise on the part of the breeders.

Permit me to say a few words with reference to the circular, etc., methods of advertising. The pursuance of the circular and "follow up" system of advertising sometimes succeeds where other methods fail. Not all prospective customers can be captured by one method of ensnaring. Neat booklets, accompanied by persuasive letters, should follow inquiries in regard to prices, stocks, etc. If you receive no response, follow up with additional letters, burn upon his memory the fact that yours is the only breed that will meet his requirements. Keep hammering away until there is absolutely no hope of success. In this class of advertising, it is persistency that brings results. Most firms use a clever imitation of a typewritten letter in above methods; other firms have discarded this method for the actual typewritten letter. There is no doubt as to the favorable impression created by the latter style. Many of these letters show a wonderful knowledge of human nature by attacking its vulnerable points. Use good stationery. A halftone cut of your winning cockerel, or other member of your feathered kin upon your stationery adds to the attractiveness of letterheads, etc., in addition to keeping your strain in evidence.

Keep in touch with all customers. Letters, booklets, or circulars sent out at the proper time keeps you fresh in the minds of your patrons and will be the means of booking subsequent orders. Practice the little business courtesies conducive to success—prompt attention to correspondence, the settlement of misunderstandings, etc. Be fair even to your competitors. The editor who shows favoritism will soon cause a suspension of his paper. Advertising, like everything else, has its ups and downs. There are, however, few obstacles so formidable that will not vanish before a "do or die" determination to succeed. Adhere to this principle and in the end, the highest award is yours.

IMPROVING THE FARM POULTRY.

Careful Selection of the Breeding Stock the Safest and Surest Way to Improve the Flock—Read and Study the Poultry Magazines.

Written for American Poultry Journal by E. J. Fish, Strongsville, Ohio.

This is an age of improvement. Somewhat of the spirit of the time is shown by a statement like this frequently found in catalogues of poultrymen: "What is good enough for today is not good enough for tomorrow."

There must be progress in every industry or we soon find that industry crowded out. I fear too often that has been the fate of the farm poultry. It is given over to the busy housewife. She is by nature well fitted to care for the poultry, but her duties are already too numerous to be expected to have full care of the poultry.

The youngest reader can look back a few years and notice great improvement in every industry. There has been equally rapid improvement in the poultry industry.

In 1852 the first pen of Asiatic fowls was presented to Queen Victoria. From that pen have been produced the magnificent Asiatic breeds, Brahmas, Cochins and Langshans, that bear almost no resemblance, either in form or color, to the original pen.

From the warm countries of southern Europe came the heavy laying breeds, but not in the state of perfection that they are now found.

The improvement has taken place mainly in the hands of the painstaking fancier. What we need is more improvement in the farm poultry. It is time the old speckled biddy, that will roost in the trees and in summer lay a setting of eggs under the barn, and come off triumphantly with a dozen chickens that nothing but a cat or hawk can catch, had served her time.

Every one must determine for himself the branch of the poultry industry that best suits his tastes or surroundings. If the production of winter eggs be the object, I think it is the branch of the poultry industry best suited to the farmer because it requires much time in the winter, when the farm work is not so urgent. You must select one of the heavy-laying breeds, as the Leghorn.

But great care must be exercised to select a strain that has

been bred for egg production. There is a great difference between strains of Leghorns, both as to laying qualities and early maturity. A little forethought in the selection of a strain that has been bred with the desired object in view will greatly expedite matters. The best of care must be exercised that the growing chicks receive no check in growth. They must be well fed and kept free from lice if the best results

crow, or yard them. Deformed or sickly fowls should not be allowed with the flock.

An article on improving the farm poultry would not be complete without at least a word about the poultry press. Before investing in thoroughbred fowls subscribe for at least two good poultry papers, and read and study their pages carefully. By thoroughly informing yourself on the theoretical side of the business before investing your money you will be the better able to proceed with your eyes open. In a short paper like this many matters of detail must of necessity be omitted, such as location and construction of houses, incubation, rearing of chicks, details of feeding, etc.

Finally, I would emphasize proper selection of a strain of thoroughbred fowls best suited to your wants, the best of care at all times, and separation of the sexes as the elements of success.

HOW TO ESTABLISH A POULTRY BUSINESS.

Instructions to the Beginner, Whose Ambition is to Get Prominently Before the Public as a Fancier and Breeder, and Establish a Paying Business.

Written for American Poultry Journal by Mrs. M. B. Williams, Salisbury, Mo.

A beginner in the poultry business should decide at the start what particular kind of poultry he wishes to raise, and whether he wishes to devote his time to eggs, broilers or pure bred stock. When he has decided this point, then the amount he wishes to invest and the locality in which he wishes to start in business, should be carefully considered.

There are so many branches in the poultry business that there is a profit in. You must decide yourself what you are best adapted to and that is the one you should embark in. If a breeder or fancier get the best your money will buy; high priced stock of good quality is always sought for. If you have filled an order for eggs and the customer writes you that they did not hatch, give half a setting; you will lose nothing unless they are trying to beat you. Always give customers more than they expect; confidence is half of the battle. Remember, you will find kickers like the Missouri mule, born a kicker, dies a kicker. They cannot hurt a Christian and poultrymen are all Christians. Be sure you have what you advertise, and select a medium that will bring best results. This is the only way to talk to a customer, as through the printer's ink we use the 'phone to talk to a prospective customer. Remember you stand as the receiver, blow your own horn about your birds; don't take time to blow down a brother fancier; tell it in a

BARRED PLYMOUTH ROCK.
First prize cockerel Wisconsin State Show, January, 1906. Bred, owned and exhibited by King Bros., Oshkosh, Wis.

are to be obtained. A uniform flock of strong, healthy pullets is a source of pleasure and profit to the caretaker.

But you say you haven't time to grade up such a strain of fowls. True, you have not, but you can profit by the years of patient care and experience of fanciers and place yourself on an equal footing with the owners of the best laying strains in the world at a very little expense. Strains that are the result of years of careful breeding and selecting of the best layers for breeders by means of trap nests. Many strains have been built up from hens laying 200 eggs a year that will, in the hands of the farmer, certainly be a vast improvement over the ordinary flock.

A few dollars invested in a trio of fowls or a setting of eggs will be the means of greatly improving the farm poultry. Every farmer can with a very little outlay of time or money make a suitable house and yard for the few choice fowls, and by the end of the breeding season be the proud possessor of a fine large flock of thoroughbred fowls—fowls that will be the pride of the whole household. Every member of the family will be interested in them. They may be the means of keeping the boys and girls on the farm.

But you say, why all this trouble for the fowls? Why won't the common mongrel do as well? They will not do as well. They have not been bred with any definite object in view. They are the result of haphazard effort, not of scientific breeding. Even if crossbred or mongrel were better in the utility way, you would lose the satisfaction of possessing a uniform flock and the opportunity of selling choice birds for breeders.

If the object sought is meat, then you must select a breed that produces a plump, large body, as the Brahma or Cochin. Their quiet, peaceful disposition well fits them for fattening in large flocks. Large birds thus fattened go on the market in prime condition for roasters and demand a higher price than the common fowl.

Again, if we wish to combine the production of eggs and meat the American breeds, such as the Rock and Wyandottes, will be best suited to our needs.

I believe it safe to say fully one-half or more of the poultry of this country is kept in small flocks as a side issue on the farm. It may be said also that in many cases the fowls share the fate of the kitchen garden, indifference and neglect. Many farmers that would not think of neglecting their crops or stock ignore or forget that hens, to pay, must have care. They must have grit, water, a variety of grain, green and animal foods and wholesome, clean quarters. A mistake often made is letting the cockerels grow with the pullets until fall or winter. If the production of pullets for winter eggs is the object, send the cockerels to market as soon as they begin to

BARRED PLYMOUTH ROCK.
First prize pullet Wisconsin State Show, January, 1906. Bred, owned and exhibited by King Bros., Oshkosh, Wis.

businesslike way. The editor is the "Hello Girl," printer's ink the conductor; a customer receives the message they are waiting to hear. "Hello, who is there, the Plymouth Rock, Wyandotte, Leghorn, Red or some other breed?" Don't blame the editor or conductor if your message did not bring good returns. You are an amateur just beginning to use the editor. He is the machine; he is worked as you

use him; he talks as you told him; that message may bring good returns in a number of months. Be prompt in replying to letters; be kind enough to help out the inquiring customer, as that belongs to the business. He may not always want your breed, but some friend of his might, then you need them.

Visit poultry shows, put your birds before the public; also join a club and help bring your birds into notice. Have them scored. Have what you advertise; send out what you promise, so the inquirer will see that you mean business. We all like to connect ourselves with prosperity, so some one will take up your breed; go after the business as if you were hungry and wanted something to eat. By so doing you will bring success. Fanciers are not made, but born; they are like a diamond, only rough at first, but polished which makes the brilliancy of the diamond, and grit, forbearance, honesty, industry and fine birds for material help make the fancier. Read the lives of other fanciers; how years of perseverance has attained growth of reputation; that is the brilliancy of success. If you are not born a fancier you cannot be made one, so take some other branch of poultry business that is to your liking; stick to it. Don't only look for the dollars and cents you can make in the business; it is caring for the little expenses and losses that brings success. God never made the world in a day, so it takes years to reach the top of the ladder, to bring you to a successful breeder or fancier. As time rolls on you have that mistake to correct and expenses to curtail, as money makes money. You have placed yourself before the public; you do not belong to yourself any more.

It is yours to serve; you may be handled with silk gloves; more probably like the monkey handled the cat's paw in raking out the chestnuts from the fire. A breeder or fancier is never satisfied with his birds; always trying to bring them to perfection, so that they can stand up and crow by clapping their hands, saying, I have the world's best cockel-doodle-do.

START RIGHT.

It is the start that counts very largely in any successful undertaking, and certainly this is a true saying in poultry raising. You don't have to be rich to have a fair beginning, to make quick profits on small capital invested. The poultry business is a business that is open to almost every one, and there is certainly no danger that poultry raising will ever be monopolized by a trust. Try and have your flock so they will lay well the year round, because "it's the hen that lays well that pays," and to have your hens lay all year takes lots of care. What is worth doing at all is worth doing well. First of all hens need a good warm house; that doesn't mean an expensive house. In cold

WHITE PLYMOUTH ROCK.

First prize hen at Ann Arbor, Mich. Score 95%. Owned by E. C. Zoeller & Son, Jackson, Mich.

weather feed warm feed, put their corn in the oven and let it parch; it will give them bright red combs. Always see that they have tepid water to drink, for hens cannot lay eggs and drink ice water.

Last year my 150 hens layed 16,385 eggs the whole year, which meant better than \$300.00 to me, and what they ate was not much, as they have the farm to run on. Of course, they took a great deal of my time, and especially during

the cold weather. My chickens and I are well acquainted with each other, for kindness means lots towards gathering a basket of eggs. Some people say, "Oh, the Leghorns are so wild;" well, that is as we treat them. Our experience is the best teacher and the Brown Leghorn has proved to me to be the best all purpose chicken there is. A number of my friends who are poultry raisers still cling to the Ply-

BARRED PLYMOUTH ROCK.

First prize cockerel, Chicago, 1906. Owned by Dr. O. P. Bennett, Washington, Ill.

mouth Rock, and if we should judge their excellence by their popularity we would all have to acknowledge they were the only chickens. I know them quite well, and I believe in proving all things, and hold fast to that which is good.

There is a gold mine in your back yard, when you make it into a poultry yard, and the best time to begin is right now, for there is money in poultry in every part of the United States. First subscribe for a couple of good poultry journals, then buy an incubator and brooder, of good make, and five dozen hens and five cockerels and see for yourself if you don't make a gold mine out of your back yard. You do not have to have large grounds nor expensive buildings. Of course to begin on a large scale will cost lots of money, but I think it wise to begin at the beginning. In other words, commence at the bottom of the ladder and crawl up. There are a few things to be remembered: start with good stock, good shelter, good wholesome food and constant unceasing care and study. If one does not prosper in poultry, it is sometimes due to their negligence and failure to give them proper care. Of course a great deal depends on the right kind of a start, and then when we see we are successful poultry raisers, it will only be one more demonstration of what energy and stick-to-it-iveness will do when one applies the rule in starting right in the poultry business. The prices in poultry and eggs are higher each year and the demand is heavy, for we know the population of the country is growing fast and it is certainly a fact, that prices of meat and provisions increase gradually as compared with other commodities, and if we start right we are sure of success. I send my egg record of 1905.

THE FIRST INCUBATOR.

The time has come in the affairs of men when most people, at this season of the year, are thinking of investing in some kind of an artificial hatching machine. I say most people, for where can you find the man or woman who is not interested, if not for profit, for pleasure? This hen fever has become an almost universal side issue with all classes and conditions. The question naturally arises, where can I get the best machine for the least possible outlay? Now there are incubators, and incubators good, bad and indifferent, and yet I have no doubt that the great majority of them answer the purpose for which they were invented.

I am not personally interested in any make of incubator, nor am I trying to increase the sale of any particular machine, but experience has taught me that a good standard machine, one that has stood the test and is endorsed by experienced poultry raisers, is the best one to invest in, even if the price is a little higher than some others. To the undecided I would say study the different catalogues of several manufacturers and select the one you think best adapted to your needs. Of course, each manufacturer will claim individual merit, that far surpasses all those of his competitors. Many a good machine has been worse than useless in the hands of a careless operator, and many a poor machine has been a profitable investment to a careful, painstaking person. Careful study of the instructions of the manufacturer and looking up the details of the work means greater success than automatic egg turners and hygrometers. Of course, strongly fertilized eggs from prime healthy stock also help greatly to save the reputation of the maker of the machine. I think the best advice I ever read along this line was "Don't monkey, but go to work in earnest and learn the thing at once. Don't expect too much. One hundred per cent hatches are as rare as hen's teeth. The machine's brains lie in the head of the operator."

Set the machine level in some dry, well ventilated room, where there are no great extremes in temperature; run it for a short time without eggs and get familiar with its peculiarities, studying all the details; fill and trim the lamp at least once every day; fill the tray with fresh, fertile eggs and turn and air them at least once every day and keep the temperature as near 103 degrees as possible, and no one with ordinary intelligence ought to make a failure of the hatching business. It does not require extraordinary genius or ability, but no indolent or careless party need apply. Some fear wakeful hours, but any machine worthy of the name will run ten or twelve hours without attention if rightly located and adjusted. The loss of one hatch does not condemn any machine.

Perseverance means success, of which eternal vigilance is the price, patience and long suffering are the virtues and endurance and stick-to-it-iveness are the qualities, and he who is faithful for twenty-one days will generally be rewarded with such a bunch of peep and fluffiness that his troubles are just actually beginning, but he who undertakes must be prepared to meet all emergencies. F. E. Puff.

DO NOT GET DISCOURAGED.

"Oh! I am so discouraged. I don't get any eggs in the winter season. I do not have any luck with my incubator nor my brooder, and it seems everything goes wrong. So I have about decided to give up the very idea of trying to raise poultry," is the cry of so many of the people who have undertaken the poultry business. Now if we all should give up so easily who will carry off the prize? or who would get the nice delicious fried chicken for dinner? or who would have the lovely dish of poached eggs and ham for breakfast?

The very thought ought to encourage us to never say fail. The point is to start right and go ahead with a willing heart and a ready hand. Do not attempt the work unless you are willing to work, for work and good management is the sure road to success. I will give you a few points to aid you, who are so discouraged in the line of poultry culture. I have been keeping the non-setters and a few of the fancy breeds for about seven years, and have had almost perfect success the past four years, never losing any from the many contagious diseases so many complain of losing them.

First you must get good stock to start with and strive to improve each year by careful selection of breeding pens. It costs no more to grow a hundred good chicks than it does the same number of scrubs. Even if sold to market the pure bloods will bring better prices. If sold for improving other flocks they will bring five or ten times as much as common fowls. You must learn to raise chicks. It is no trick to hatch them. The brooder is of more importance than the incubator. Many beginners will hatch a thousand chicks and

only raise 200 sickly scrubs. It were better to hatch half the number and bring to maturity a goodly percentage in a healthy, thrifty condition.

Don't try to do too much at one end of work and neglect other important items. When sickness attacks your flock try first to discover the cause and remove it. It's no use trying to cure sick chickens while the cause exists. If improper food, remedy it. If dampness, make the house dry. If lice, get rid of them. If dirt and filth, clean up. Find out the cause of the trouble, then go after it intelligently.

Feed anything that will make a good mash, such as cooked turnips, beans, potatoes, cabbage, beets and always mix with cornmeal or wheat bran, using boiling hot water to moisten it. Let your food cool down until you can bear your hand in it. At night I give plenty of yellow corn and always keep before them plenty of good pure water. I feed my baby chicks plenty of wheat in the head. It gives them exercise and makes them strong. For a mash I give them scraps from the table, bread-crumbs, rice, oat flake, meat scraps and mixed with the "left over gravy," and I can truthfully say that I think these simple rules are due to my success, for my chicks and hens grow off beautifully and my chicks win the praise of the country. We have no shows here. Now, my dear readers, let us read more, go to work in good earnest, let our failures prove our blessing, and help our fellow workers along the line of poultry by getting them to subscribe for the American Poultry Journal, for it certainly is the best poultry journal of today, the most up-to-date in all its details and instruction. Let's win for our Journal and country the laurels of the day.

Jefferson City, Tenn.

Mrs. Mary A. Rankin.

SELECTION.

This subject during my year's reading course was a little obscure. But since I have some of the real experience I begin to comprehend its significance. I feel so impressed with its importance that I'll pass it on. This is new to the amateur and the unenlightened (and the amateur can write in his sphere); to that class I address.

At the onset I make the condensed statement frankly that selection is the first half and care and feeding the last half. Not only in the beginning is this to be observed and practiced, but never ending. You can't tell the "old breeders" anything about this. But if the beginner don't insert this in his poultry calendar I fear his efforts will result in heartaches.

Selection and care are the predominating essentials. Yes, we know that fowls ever so well bred and no care will not make the most, and fowls ever so well cared for and no selection of parents will not make the most. But we must begin to build upon the foundation and apply the other principles as we come to them. Every one has ambitions and pictures that lay in the future. Ideal—then, that ideal fixed, select your stock and cater to that end, and the battle is half won. Is any one skeptic? we would ask. How do we come by Dan Patch, and Loretta D., the world's champion milk cow, and the Senator Dunlap strawberry? Was it by luck and chance? Selection toward a certain end is the answer. Farmers are careful to select good seed corn, good clover seed and most all seeds; they see the secret in that. But small is the percent who make selection in their poultry. They keep no individual record whatever. Their flock is yesterday, today and forever, all together. Half of his flock may be loafers and he don't know it. Some give a 10 per cent dividend; some not any. The whole flock is used for parents. Then, as "like begets like," what will the harvest be? He hasn't a single pen for invalids, those under condition or over-fat hens. Is it any wonder that they denounce the hen?

Now, if he would turn around and go the other way, select the very best and generate from them (with the proper care) the flock would start on the advance. Keep an eye open every day for good point birds. (I believe the enthusiastic poultryman sees some new feature on some bird every day.) If you see one that responds most every day with a nice, well shaped egg and stands the cold weather, is strong and vigorous, shape and color all right, spot that hen. And so continue until you have a pen, with a cock the best that can be had, pen them together and you will feel better with a selection to head your flock.

You could take your common stock, a flock of mongrels, select, care and feed well, from year to year, and finally arrive at a fair standard. But from a standpoint of economy and business send to a pedigree breeder and get foundation stock. In this way you get into full benefits right away. This subject is so prominent with many, yet to thousands is yet to be unearthed. Successful authorities are heralding their ideas by the medium of the poultry journals and we can learn if we will. And if this falls on proper ground and results in at least one incentive it has accomplished its end.

Topeka, Ind.

J. C. Miller.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded N. Dahlen, Harmony, Minn., and the second prize to J. W. Moore, Knoxville, Tenn.

BEGINNING WITH NOTHING.

Of all the stories about poultrymen that have come to my notice, one of the most remarkable and interesting one is that of Arthur Beecher and his wife. Of course, I am not giving the true name of the subject of this story, but the facts are just as I shall relate them. Arthur Beecher was a hard working young fellow, who lived in a rather remote village in New York, about 300 miles from the big city of that name. A great many large flocks of poultry were kept in this neighborhood for the land was so poor that the farmers were compelled to take advantage of every chance to eke out the slender returns from their land. When Arthur Beecher took one of the lasses of the neighborhood as his wife he had little besides the clothes he wore, enough to scantily furnish a modest cottage and strength and ambition. His wife brought him no dower and these two young people faced the world with very little seeming chance of ever rising very high. They began housekeeping and of course had their little flock of chickens, as was the custom of the country. By the hardest work and closest economy they managed to save a little money. Well, being that he had a little money, he thought he would try and buy a small farm and start in the poultry business as he had a liking for that business and it was not very hard work. So one day he bought a farm consisting of thirteen acres, which was about the poorest land that ever lay on the bleak and barren hillside. The land was so poor that it would not produce even the scantiest of crops and on it was an old house and a tumble-down barn. The thirteen acres were bought for \$300 and it seemed to the seller that he got a good price for the little farm. Long time was given and the young couple began to raise White Leghorn fowls and seek a market for their eggs. They gradually edged ahead, always supplying only the very freshest eggs, sending them to market clean and white. At first they were sold in the local market and later they were sold in New York, more than 300 miles away. It was not very long before a case of eggs with Arthur Beecher's name on it was taken the instant it landed in New York, for dealers had learned that such cases never had anything but clean, perfectly fresh eggs in them. The competition among dealers for the Beecher eggs became so keen that a grocer who sold only the best goods wrote Mr. Beecher, asking him to ship all his eggs direct to him, offering five cents above the market price. This was the beginning of success for the young poultryman and he redoubled his efforts to make his brand of eggs perfect. First one New York grocer, then another, bid for the eggs each offering a little more for them until one finally offered a minimum price of 25 cents a dozen at any time and 10 cents above the market price always. In the meantime the droppings from the poultry house were being taken out and scattered on the land and one corner of the bleak little hill farm began to produce fairly good crops. From buying all his feed Mr. Beecher began to raise part of it and keep more hens. He built cheap poultry houses at first and later built better ones, all the time improving his land by the use of poultry droppings and getting trees and berry bushes planted. He carefully selected his breeding stock and hatched his young stock only from his best hens, choosing the best layers for his breeding pens, as up to this time he had not thought of selling eggs for hatching. He bought pure bred stock, and it was not long before he had a fine flock of white beauties running over the little farm. With improvement in stock came more eggs, which brought more money and left him with greater profits. He built poultry houses, increased the number of his fowls, improved his farm and four or five years ago built himself a fine new house. His name and fame got abroad and the demand for his stock became so great that he sold many dozens

of eggs at a high price for hatching and instead of selling the cockerels in the market he began to sell them for breeding purposes at from five to ten times as much as he could get for them in the dressed poultry market.

I visited his farm only a few months ago. This is what I found: A fine house and barn, poultry houses built in the best and most substantial manner, scattered all over the place, twenty of them on the thirteen acres, each capable of taking care of 100 fowls at a pinch. On the highest place on the farm is a great cement tank to which water is pumped by windmill and from this tank conducted to every poultry house on the place. The biggest berry bushes I ever saw were growing on the land and where a patch of corn was standing the stalks showed the land to be fertile. "I cannot afford to raise corn or other grains," said Mr. Beecher to me, "because I can make more money out of eggs and berries. I raise a little corn here and there during the summer so the young chicks can run in it during the hot weather, on account of the shade. My berry bushes I train high, you see, and the hens do not bother the fruit much as they have plenty to eat without it and rarely find it at all." "How did you do it?" I asked, knowing something of the story already. "Just by sticking to it," he said. "I was determined to make a success of it and wife and I worked hard, early and late, and you see the result. All from hens?" I asked: "Every single, solitary cent?" He answered: "I never did anything else since I began here, and all I have made has been profit from keeping hens, nearly all of it from selling chickens and eggs in the open market in competition with all the world. I never intended to be a fancier, but people got to sending to me for eggs and fowls and I asked the going price from the breeding standpoint until now my sales of eggs for hatching and fowls for breeding purposes bring me greater returns than I get from the market end of my business." "What do you feed your hens?" I asked. "That depends," he said. "If it is dear, I feed less; I feed oats, corn, bran, middlings, broken rice, buckwheat, beef scraps and most of the other things hens will eat and which is good for them. I haven't any set rule for feeding and considerable depends on the market price. I always feed plenty of meat scraps, such as are prepared for poultry, feeding this in a mash made of cornmeal and bran or middlings scalded in boiling water. I manage to keep the hens busy most of the time by having them dig for grain scattered in straw in the yards. It isn't much of a trick to keep hens in good laying condition if you will only give them regular care." "Then you have no secrets about your methods?" He laughed and said, "No; I am willing to tell any one all I know. There are no secrets in my business." "Aren't you afraid so many might follow your methods that the demand will be more than filled?" "Not at all. In the first place, the demand is too great to be filled and in the second place there are a lot of people keeping hens who never get more than half as much as they might from them. The man who furnishes absolutely fresh eggs from hens properly fed on sweet, clean feed, will always be able to sell at a good price. Here I am, so far away from New York that there is no direct line, and yet grocers down there are fighting to get eggs from me, because they know just what they will get. The poultry business is as stable as growing wheat, corn or any other necessity, and much more profitable." I looked around the fertile little farm, with its neat poultry houses painted red, trimmed with white, and asked: "How much have you invested in this place?" "The buildings and water system cost me something more than \$15,000 and the land \$300," he said. From the railway station I looked back up the hill to his farm and did not wonder he called it Fairview.

N. DAHLEN.

Harmony, Minn.

PREPARING FOR THE HATCHING SEASON.

Once more "Old Father Time" has scored and the year 1906 has gone the way of its predecessors and now we are starting another year, which I hope will be even more successful for poultry men and women than 1906. The past year, from all accounts, has been the banner year in this business.

Now is the time when all poultrymen are thinking of the young fries and broilers and should be right now getting things in shape for hatching and rearing them. Now, there is the incubator and brooder. These should be gotten ready. Look over and disinfect them thoroughly and if your incubator should be a hot water one it would be well to test it to see that it has not sprung any leaks while it has been stored away. Then the lamp may be out of repair, or the lamp chimney, or the wick. Now is the time to remedy these things; also, if you use hens, build your brood coops, etc. You have more time now than after the broods come. All successful poultry raisers, of course, don't use incubators and brood-

ers. Some depend on the "biddy" for raising their young chickens, and these (and all others) should begin now and get rid of all lice and mites on their hens, so as to be free of them on arrival of "little ones." The houses should be thoroughly cleaned and whitewashed, also roosts given a good painting with kerosene or other disinfectant.

A good way to disinfect the walls is to scatter air slaked lime over the walls so that all the cracks will be filled. The fowls should have a good dusting with insect powder. All these things are more or less work, but to succeed with poultry one must work, as luck won't raise chickens. If you have selected your breeders and have them penned it is well to begin giving them an extra supply of green cut bone, to insure fertility, as nothing helps the fertility more than green cut bone, and those who depend on hens to do the hatching would do well to begin feeding a little heavier to be sure of getting hens in shape to want to set. If they have been laying well all winter they will not need much "extra" to make them want to set, but a poor hen seldom gets broody.

When chickens hatch give the hen another dusting and after the chickens are a few days old it is a good idea to rub a little cream on their heads and around the vent to kill any lice that might have got on them. It goes that good food and water must be furnished at all times, yet chicks under a week old require very little water; in fact, I believe, from my experience that chicks given water twice only the first day, morning, noon and night the second day, and kept before them after the third day is a good way as naturally little chickens would hardly get away from the nest the first day far enough to get to water. At least they would not suffer and cold water I believe is the cause of bowel trouble sometimes.

Some use a brood coop in which the hen can scarcely turn around and let the little ones run as they like. That's all right, but I prefer to tie the hen by the leg, using a piece of leather to go around the leg, tying a string to it as the leather protects the leg, using about six or eight feet of string, which gives the hen a little exercise, and they seldom worry after a day or two. For a brooding place for hens a cheap one is a good sugar barrel laid on its side. They seldom leak and when the season is over they are worth almost as much as they cost for kindling. Two or an even number of hens should be set at once and when two hatch give all the chickens to one hen and set the other one the second time. This saves lots of time for your hens that you can keep laying and it's economy to break up brooding hens when you have all you need setting. After the hens wean the chickens the barrels should be dumped of the nesting and it burned. Hold them so the blaze will go up in the barrel and kill all the vermin. To be successful you "must" keep down the vermin, as they bring all fowls to a condition favorable to disease. J. W. MOORE.

Knoxville, Tenn.

FERTILE EGGS AND HOW TO SECURE THEM.

The breeding season is at hand. Securing a high per cent of fertility in eggs is a problem to be solved by all breeders. The first essential in securing a high per cent of fertility is good, strong, vigorous stock.

If the stock is from an established egg strain of fowls of course more eggs may be expected. The stock being vigorous, then the next important things to be looked to is the housing and feeding. Most breeders of Standard bred poultry have their breeding birds separate from the rest of the flock, which is necessary to improve the quality of their birds. The runways or pens in which the birds get exercise should be as large as the breeder can conveniently make them. When the pen is large the fowls will get almost enough green food to supply their wants. A pen 30 feet wide and 75 feet long is a good size, and if it is on a grassy place it will furnish a great amount of pure green food. When the pens are small of course green food must be supplied. The house for one pen (9 to 13) of fowls should be about 10 by 13 feet, and divided into two parts, viz., roosting room (10 by 7 feet) and scratching shed (10 by 6 feet). The roosting room should face the south and be 9 feet high on the south; north side 5 feet high.

The scratch shed roof should slope to the south and join on the roosting room about 2 feet below the top of the roof, making the shed 7 feet at the north and 4½ at the south. A curtain made of muslin should be across the south side of shed.

All the rest of the walls should be lined with tarred felt. In the wall between the shed and roost room, make a hole 18 inches square and tack over it a good quality of muslin; this is positively the best system of ventilation I ever saw, as there is no draught. Just above where the

shed roof joins to the roost room should be two slide windows, which admit the sunshine into the roosting room. We have found this to be a very fine breeding house. It is economical, but is very comfortable, which is necessary to the production of plenty of fertile eggs.

Now for the feed. The larger breeds eat more than the smaller ones. We breed Rose Comb Black Minorcas; they are of medium size. The amount of feed for each bird may vary under different conditions, so I will not lay down any specific rule for feeding. There should be three small boxes made especially to supply grit, oyster shell and charcoal; then the birds can get a supply of these three necessities at any time; of course, plenty of pure water must be given them, as about 70 per cent of an egg is water.

The following is a good ration for breeders: Ground wheat, ¼; ground oats, ¼; millet seed, ¼; cut clover, ¼; mix this and feed as a mash in the morning. Do not feed enough to entirely satisfy their hunger; then in an hour throw small grain in the litter which you have put in the scratching shed. This will keep them exercising during the day. Exercise means strong, fertile eggs and plenty of them. For the evening feed give whole corn and wheat. Cut the clover with a clover cutter into bits about ½ inch long, and pour scalding water over it. Let it stand a few minutes, then mix the mash with the warm water that is among the clover.

Cut clover is one of the best all around feeds known; besides, it costs almost nothing. Beef scraps or green cut bone should be given in the morning feed about three times a week. When either of these are fed in mash they should compose about ¼ of the feed. Birds fed in this manner will be sure to lay plenty of fertile eggs. The secret of success is: "Mind the details." J. D. YATES.

Spickard, Mo.

HOW TO MAKE HENS LAY IN WINTER.

In order to obtain the best results from hens in winter, it is necessary to give them regular feed and care.

We always have plenty of eggs to sell in winter and this is the way we manage:

Our hens are kept in good, comfortable quarters, with never over thirty hens in one flock.

Our house is 70 feet long by 14 feet wide, divided into seven apartments, giving 140 feet floor space for each 30 hens, nearly 5 square feet to each hen. This gives ample room for the Medellaneur class which we breed.

The ground floor is yellow clay on which is kept 1 foot of straw.

The first thing in the morning our hens are given a feed of whole grain, consisting of one part corn, one part wheat and one part clipped oats. About two quarts of this, thrown in the litter to each 30 hens, will give them good exercise, which all laying hens should have when coming from the roost to keep them healthy and in good laying condition. This feed will keep the business hen busy most of the forenoon.

At noon we feed a warm mash of coarse bran, one-half bushel, loose measure, into which is mixed one-half peck of small potatoes, cooked soft table scraps and two pounds of ground bone, using some good poultry food every other day.

This mash is fed in troughs, which are hung up out of the way as soon as emptied, which never requires over five minutes.

At night they are fed one-half the same feed as in the morning; this being warmed on cold days. We often parch the corn black, and this takes the place of charcoal to a certain extent.

Fresh, not cold, water and plenty of grit are kept before the hens all the time. Our grit boxes are made on the self-feeding hopper plan, so there is no waste.

After the coarse grit has been picked out we screen what remains for small chicks in the spring.

For animal food, we give plenty of skim milk and pork cracklings, which we find just as good as green bone, and much cheaper. We buy the cracklings from the butcher at 1 cent per pound, pounding them up and feeding in the mash or separate.

We find mangel wurzels, hung on spikes two feet from the ground, the best green food obtainable. Cabbage or potatoes fed in the same manner make an acceptable change.

We also use the blossoms and leaves of the big red clover, always found in abundance on the barn floor, where hay has been thrown down. This is fed in the litter.

After our hens have layed heavily all winter we get a high percentage of fertile eggs, which hatch good strong chicks. Thos. Thorniley.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

The Great Need in the Poultry Business.

The great and crying need in the poultry business today—and it has been for many years past, is the illustration in colors of ideal specimens of all recognized varieties of fowls, which can be accepted by the fancier as a model toward which he should direct his efforts, and as an object lesson and incentive to the beginner to select from and become interested in, thus in a still greater way to develop and increase the breeding of thoroughbred fowls.

The American Poultry Association should be the logical head and source of all poultry information, and its members and the poultry world at large have for a long time looked to it to be the pioneer in presenting to the poultry world this highly essential feature in the education and development of fanciers. Ambitious attempts from time to time

have been made by certain progressive members of the American Poultry Association to introduce into the Standard the feature of illustration. Way back in the time of artist Lee, outline drawings of a few specimens were published and issued for a short time, only to be discouraged, the action rescinded, and the edition containing the illustrations withdrawn from circulation, owing to the difficulty of a majority of the voting members of the association to agree upon illustrations that would conform to the printed Standard.

Later on, within the past two years, the American Poultry Association has authorized and published the illustrations, in black and white, of a number of the more popular breeds, and it is to be congratulated upon this long step in advance. Still there are those in the membership of the American Poultry Association who claim that this was a mistake and will endeavor to have the illustrations again withdrawn. There is, however, a larger proportion whom we believe are thoroughly in sympathy with the illustrations in black and white as they now exist in the Standard, and they, being the majority, will undoubtedly influence the continuing of the illustrations. While the illustrating of the few varieties in black and white was a great step ahead and has increased the value of the Standard, there are many who are not yet satisfied and will not be satisfied until a more progressive action is taken and all the varieties be reproduced in colors.

The Reliable Poultry Journal of December voices this prophecy in no uncertain terms, and we quote from its editorial, describing some of the excellent colored illustrations that they are producing, as follows:

"And yet they tell us (a few pessimists!) that it would be stark foolishness to try to improve the American Standard of Perfection by illustrating it in colors. Spare their lack of enthusiasm—of business judgment! Certainly we can improve the Standard of Perfection by the introduction of colored plates (single birds preferred), and it will come to pass sooner or later—mind that."

While urging the sale of the Standard and upholding the hands of the officers in every legitimate way, and not wishing to interfere with or detract from the value of the Standard, we regretfully say that the American Poultry Association may have overlooked its opportunities and the poultry world be presented with a complete, accurate, up-to-date set of illustrations of every recognized variety of poultry, turkeys, ducks and geese raised in the United States through some other source.

Our Great Series of Poultry Pictures.

We gave last month an outline of what we propose to furnish to our readers during the months to come. There has long been felt a want among poultry breeders of a complete series of colored illustrations of all the recognized varieties of poultry, turkeys, ducks and geese, and we again call attention to this splendid feature, so that our readers may be anticipating with interest the first appearance of them. We can not promise the exact date, but the series is nearly finished and will soon be ready for the first installment.

This series will differ largely from

the usual colored illustrations that have from time to time appeared in poultry publications. Those of the past have been almost universally of what are called the popular varieties. We propose in this series to treat every variety equally, having the male and female of each variety illustrated true to shape, color and markings; and when the series is finished the complete list will be something that every breeder will, without doubt, want to preserve and cherish as examples of illustrations of ideal fowls as they existed in the year 1907.

In the production of these illustrations we are not asking a single breeder to share with us in the expense of producing them. To say in cold type that they will cost us thousands of dollars hardly conveys the energy, time and interest that we have put in them, and the only compensation we hope from this work is the added interest that poultrymen will have in the old American Poultry Journal, that has for over a third of a century catered to the best there is in the poultry world and the poultry business.

It will therefore not be out of order for us at this time to earnestly urge all our readers to early send in a renewal for their subscription, that they may have in complete form this whole series without a break, as our editions may possibly be exhausted before every one is satisfied. We feel that we can with good grace, in presenting this series of pictures, wish our readers a Happy New Year and a share in the best there is in the poultry business.

Our Color Plate.

We announced last month that in this issue we would present to our readers the illustration of the \$1,000 White Plymouth Rock hen, Mary E., bred and owned by U. R. Fishel, of Hope, Ind. The completed illustration, as we present it to our readers this month, is fully up to our great expectations and clearly represents the quality that Mr. Fishel has so long and ably maintained in his poultry yards.

There is probably no one in the country who is better known or has gained a more enviable reputation among breeders and buyers than has Mr. Fishel. He has been a consistent and painstaking breeder, has had the courage of his convictions regarding the quality of his stock and has not hesitated in and out of season to present the good qualities to the American public. This is at the same time an encouragement and incentive to others, demonstrating that there is money in poultry and science in breeding.

Mr. Fishel has not only won prizes in this country but has been successful in the great English shows, and his birds have won in many foreign countries. The success that has accompanied him has helped to raise the business of poultry breeding to a high level and to maintain it among one of the greatest of the industries of the country.

We are confident also that our readers will appreciate the rare treat that we are giving them by presenting this picture, and in their appreciation we will be compensated for the expense and effort that we have ourselves put into the matter. This is not the last of the good things that we will present to you,

as another one of Mr. Fishel's birds, Edward B., Jr., will be given in our March number, being, we believe, the first instance that a poultry journal has produced two colored pictures, showing the birds from one breeder's yards.

Our New Series of Articles.

It is with more than ordinary interest and enthusiasm that we announce to our readers a new series of articles that we propose to present to them in the columns of American Poultry Journal, commencing in this issue, on the "Mating of Breeds," written by our associate editor, Thos. F. Rigg. In this series he will also compile articles from the very best and leading poultry breeders in the country.

There are many varieties of poultry included in the official guide of the American Poultry Association, the American Standard of Perfection; many of these have held the boards for years; gradually new varieties have been produced, or borrowed from our foreign neighbors. Foreign varieties have been assimilated and changed to American standards. New varieties have appeared, the result of accident or selection, and after passing the prescribed period of trial and breeding, until a distinct new variety is ascribed, have been introduced into the Standard.

Many of our Standard varieties have been fortunate in falling into the hands of enthusiastic breeders, who have tenaciously adhered to Standard requirements; industriously bred them through discouragement and failure; have encouraged and aided the formation of Specialty Clubs and have industriously sung their praises in poultry papers. Other varieties have lacked this energetic promotion; perhaps have been handicapped by severe Standard requirements; perhaps have not come up to commercial demands of egg production and market purposes as well as show room qualities; and, while they have enthusiastic followers and admirers, they have, through some of these reasons, fallen behind in the race for supremacy, although combining great beauty, show qualifications and market requirements.

It is our endeavor in these articles to continue the interest in the more popular varieties and to stimulate and set forth the splendid qualities in those varieties that have not kept up in the race. Many times the breeder is confronted with difficulties that seem insurmountable in his desire to breed correctly to Standard requirements the variety that he is in love with. These articles will endeavor to show how to breed and how to better the varieties and overcome the ap-

parent difficulties in the proper selection and breeding.

It is difficult at times for breeders to overcome certain defects in certain portions of the bird in order to arrive at the Standard requirements. These methods have often been considered as secrets of the business. They are not secrets, but, by an intelligent direction gained from the experience of the best breeders of the country, many of the so-called unpopular breeds will, we confidently believe, have their pathway so freely cleared of obstruction that they will jump into popular favor and the old favorites of the show rooms of the past will again assume a prominent position in the exhibits of the future and add to the great value of the poultry business. The popular varieties show no signs of retrogression, and the improvements and the progress of other varieties will simply increase the volume of business and make the show rooms a thing of beauty and a joy forever.

The readers of American Poultry Journal know that Mr. Rigg is amply able to conduct and compile this new series of articles.

A Decided Injury.

The experience of practically two exhibition seasons has proven conclusively that a mistake was made when the Standard made the demand that exhibition specimens of the American class varieties should be cut for overweight in the show room. The enforcement of this rule has proven disastrous to White Wyandottes in all shows, both east and west. Plymouth Rocks have suffered less. There is a petition now in circulation, already signed by a large number of White Wyandotte breeders, praying that at the proper time the American Poultry Association undo this obnoxious rule. Mr. I. K. Felch very clearly and forcibly sets forth the utter ridiculousness of this rule in a communication to The Feather. He says:

"Shape, weight and color. That is the question that should be the demand. When judging, shape has more points for weight than for color, and the scales govern weight. When judges will cut all specimens the two points for all deficit of standard weight, or consider it when judging by comparison and will give weight its just valuation with color, then judges will never be far apart in their scores, and the winning specimens will be selected by almost all the judges of good reputation. But when we, as is too often the case, see awards made wholly on color, and that too often the ideal color of the judge, in contradiction to Standard demand, it is time to call a halt on such judging at our exhibitions. It takes something more than mere color to constitute a first-class specimen. The Standard demands that all specimens be scored to their actual weight and prohibits a first premium to be given under ninety points. When breeders ship birds, no matter how perfect the color, to weigh only two and one-half pounds, when the Standard demands six and one-half for the same specimens, can you call such a first-class specimen? Did you ever see such, having lost eight points for weight, that were anywhere near perfect in shape? The glaring fact in almost all our exhibitions is to see the awards made solely on color to that degree that we hear the exclamations

Don't Blame the Hens

for leaving their nests when sitting; for failing to lay their full number of eggs; for being thin and scrawny; for moulting badly. It is not their fault. As long as lice are permitted to "rule the roost"—infest their bodies, these conditions will prevail. The feeder will feed the flock very much as he would fill a leaky pail with water—at a great loss, and until the leak is stopped—until the hen is ridden of lice—can full return or profit be expected. It will take but a few minutes to turn these conditions into comfortable and profitable surroundings with

Lambert's

Death to Lice

You'll find a few cents invested in this efficient lice remedy will bring returns worth dollars. It not only rids the henneries and fowls of the pests but kills them and the mites outright. Put it on your sitting hens and watch how easy and contented they will rest. It cannot hurt eggs, chicks or hen. Equally good for all body lice on poultry, horses, cattle, dogs, hogs, plants. It's the poultry keeper's "friend in need." A fine powder easy to apply that goes direct to the skin through hair or feathers. Lambert's Ointment is splendid for head lice on young chickens. Sample box of either 10 cents post paid; 100 oz. Death to Lice by express \$1.00.

"RANKIN'S ROYAL"

Barred, White and Buff Ply. Rocks and White Wyandottes are bred to win, bred to pay, bred for quality and business in every way. Hundreds of selected specimens, line and pedigree bred by my trap nest system, from America's greatest sires and champions for sale on approval at guaranteed honest prices. Eggs \$1.50 to \$10 per 15; \$7 to \$50 per 100. Seriously, you can't afford to place an order (large or small) before writing me.

H. P. Rankin, Box 61, Hartington, Neb.

in them all, 'This show is a color show only.'

"Many a pen that has lost ten points for weight has won the blue ribbon over a pen full-weight and better shaped and of good color, because the competing pen was slightly less appreciated for color by the judge. Weight and shape are just as much a demand by the Standard as is color, and when the die is cast and the end comes to all poultry, weight wins at the butcher's block. Shape has been christened as the breed and the color the variety. Shape should stand first in the consideration when all else is equal. When the score stands equal the heaviest specimen should win.

"I have two White Plymouth Rock cocks, white as a lily, weighing twelve and twelve and one-fourth pounds, with shape that stands above any other male I own. But what chance have they to win with a Standard instruction to judges to cut two points per pound for all over ten and one-half pounds they weigh? One must be cut three points, the other three and one-half points. Suppose after doing that a cock of nine pounds ties in score. The cock nearest the Standard weight wins and the ribbon goes to the nine-pound bird, the large birds having been robbed of three and three and one-half points of their real merit for the privilege of competing with one with only three-fourths the merit he has as a food supply. A wise decision that which robs a party that a competitor may reap an advantage. This instruction to judges should be expunged from the Standard and any breeder who is breeding any of the American breeds should assert in his might, and demand it, and refuse to exhibit a bird in any exhibition that did not ignore it. The judges would do more for the American breed if they refused to apply that rule in their work, for it is unjust to merit, and only in the interest of careless breeders and careless breeding."

An Unnecessary Burden.

The Columbian Plymouth Rock is trying hard to get in line with other varieties now before the public. These single-combed Columbian Wyandottes, for that is what they really seem to be, have made their appearance at a number of fall fairs this season. Some were not at all bad in color, but not a few, especially males, were faulty in combs. The latter had decided tendencies to side-sprigs, which being a disqualification, barred them from winning. The wonderful popularity of the Columbian Wyandotte no doubt is the cause of some of the ever-ready hunters after novelties to try and work in the Columbia Rock as a revenue-getter. —American Fancier.

Already steps have been taken by a number of fanciers interested in this fowl leading toward their admission to the Standard of Perfection as Columbian Plymouth Rocks.

In this connection we quote from a letter received from one of the most prominent and successful Barred Rock breeders in the United States:

"I most earnestly hope that you and others having to do with American Poultry Association matters will see to it that the single comb Columbian Wyandottes are not admitted to the Standard of Perfection as Columbian Plymouth Rocks. Such admission

would not only be ridiculous, but would be a great wrong to the Plymouth Rocks. Already the Barred Plymouth Rock has been made to bear unnecessary burdens by the admission to the Standard of fowls with no trace of Rock blood in their veins, bearing the honored name of Plymouth Rocks. Single-comb Columbian Wyandottes as Columbian Plymouth Rocks would be the last straw."

If the American Poultry Association had not played so loosely and so carelessly with the names Plymouth Rock and Wyandotte, had not depreciated the original and only true Plymouth Rocks and Wyandottes, there would be no cause for alarm that these cast-off Columbian Wyandottes would ever be admitted to the Standard of Perfection bearing the honored name of Plymouth Rock. The mistakes made by the American Poultry Association in this connection in the past are not to be corrected. To do so now is impossible. But to continue burdening the Plymouth Rock and Wyandotte with additional so-called varieties would be a mistake which the American Poultry Association has no excuse for making.

While not seemingly necessary to the welfare of the poultry industry, the production of new breeds and varieties of fowls are along lines of advancement and development, and will continue to be brought out by man. Let them take their proper place and name. Let them stand upon their individual merit instead of putting them upon the high and merited ground gained and rightfully occupied by established breeds. It is time the American Poultry Association called a halt in this folly.

The Poultry Show.

This is the season of the show. In the United States there are more than three hundred and fifty associations, organized for their promotion and management. The number is constantly increasing. Some are short-lived. But a short time ago the average duration was less than two years. Now there are many which have passed the five year mark, and some few, like Chicago, which has been doing business for more than ten seasons consecutively. This increase is gratifying to the lovers of poultry culture. It is an indication of the increased human interest in the fowl product, the greatest of the food industries.

To the poultry show is directly traceable the formation of and the improvement in strains, varieties and breeds. It is an educational institution. As such it is worthy the support of all. While all worthy public enterprises should receive our encouragement, those which by long continued success have proven the capacity and integrity of their managers, merit our fullest confidence and assistance.

Of this class is the eleventh annual exhibition of the National Fanciers' and Breeders' Association, to be held January 23 to 30, inclusive, 1907, in the hall of the Seventh Regiment armory, Sixteenth street, Chicago, Ill. Past experiences insure the visitor to it of the best and most instructive entertainment. Exhibitors have fairness in placing the awards assured to them in the employment of judges and assignments as follows:

Mr. O. P. Bennett, Washington, Ill.: Buff Rocks, Black and White Lang-

shans, Black, Buff Partridge and White Cochins and pet stock.

Mr. Charles T. Cornman, Carlisle, Pa.: Houdans, Hamburgs, Javas, Polish, Jersey Blues, Andalusians, Cornish Indians, Minorcas, Spanish, La Fleche and Malays.

Mr. E. J. W. Deitz, Downers Grove, Ill.: Exhibition Games, all varieties of Bantams, Silkies, Sumatras and Sultans.

George A. Heyl, Washington, Ill.: Turkeys and Water Fowl.

Daniel J. Lambert, Apponaug, R. I.: White and Buff Wyandottes, Brown Leghorns, Brahmas, Rhode Island Reds and Crevecoeurs.

T. F. Rigg, Iowa Falls, Iowa: All Wyandottes but Buff and White; Buff, White and Silver Duckwing Leghorns.

H. P. Schwab, Irondequoit, N. Y.: Barred Plymouth Rocks, Favorelles, Frizzles, Rumpless, Russians, Sicilians and Sherwoods.

Frank L. Shaw, Palestine, Ill.: White Plymouth Rocks, Partridge Plymouth Rocks, Rose Comb Plymouth Rocks, Dominiques and Dorkings.

W. E. Stanfield, Chicago, Ill.: Orpingtons, Anconas, Buckeyes, Red Caps, Capons.

American Birds Win in England.

Messrs. Orr, Rackham and Hutchings, who sent stock to the Crystal Palace Show, London, England, captured a number of the prizes, as follows:

T. Farrer Rackham (Peapack Farm), White Plymouth Rock cock, 2; hens, 1, and special, 5th.

D. Lincoln Orr, Columbian Wyandotte hen, 3d.

R. L. Hutchings, Buff Rock, 3 prizes. The Feathered World commenting on these classes says:

"Bronze turkeys were as well up in quality as yet seen at the Palace. The trophy winner is a grand specimen, and he is closely followed by one from New Jersey which does not look much the worse for his journey. 2, cock, Peapack Farm, New Jersey, immense size and wonderful color, with a fine rich metallic sheen, and in lovely condition could have won. White Plymouth Rock, cock 2d, Peapack Farm. Good color and shape, rather pale legs. Hen 1st and special, Peapack Farm, tremendous size, pure white color, good shape, wins easily, all the way from America. 5th (Peapack) a good white, grand shape, might have been higher."

An International Standard.

The question of an international Standard of Perfection is being discussed in some quarters. Such a Standard is needed. This fact is plainly evident to the fanciers of America and England. At present there is scarcely a recognized breed or variety of fowls bred to the same Standard by both American and English fanciers, while the exchange and barter of breeding and exhibition fowls between the fanciers of these nations is very heavy. Even our American-made Plymouth Rocks and Wyandottes have been somewhat changed in form and color markings by the English fanciers. The English Brahma does not at all suit the American fancier of the breed. The American Cochins is rejected by the English breeder. The Leghorn of the fanciers across the sea is large and coarse compared with the trim, sprightly Leghorn of the United States. And

so on, here and there, down the whole line of recognized breeds. Yet it is possible to harmonize these differences of opinion. But how is it to be done? That is the question. In our opinion no progress can be made toward the desired international Standard until the breeders of America and England compete in the show rooms of both countries. It is in the show rooms of both countries that the preliminary work must be done. Let American fanciers annually exhibit their stock at the Crystal Palace show in London, and the English breeders bring stock to Madison Square show. If this is done it will not be at all difficult in time to work out satisfactorily the scheme of an international Standard. Messrs. Burgott, Hutchins, Orr, et al., who this season sent fowls across the sea to the Crystal Palace show, are pioneers in a work that will ultimately benefit the breeders of both nations.

International Football.

There has been organized in England a football team, composed wholly of poultry fanciers, so says Feathered World. Thoroughly understanding the English character, we propose to be prepared when the American fanciers are challenged to meet this English team. We have, therefore, organized a team as follows:

Center, Theo. Hewes; right guard, Tom Orr; left guard, J. H. Drevenstedt; right tackle, Eugene Sites; left tackle, M. S. Gardner; right end, Charles Latham; left end, Joe Hilldorfer; right half back, D. Lincoln Orr; left half back, Lester Tompkins; quarter back, W. S. Russell; full back, Miller Purvis. Business manager, Geo. D. Holden. Chaperon, Chas. McClave.

We think that the making of an acceptable international Standard of Perfection will be as easy as rolling off a log after these two teams have met upon the field a few times.

Fancied Security.

There is an important issue which the American Poultry Association will be called upon to meet sooner or later, and, in our opinion, the time is not far distant when the issue will be made. Regardless of the seeming security which now attaches to the Standard of Perfection the growing demand for individual breed and variety Standards will be a powerful force ere long, a force so strong that the American Poultry Association will be compelled to hear and to heed. Conditions, natural conditions, will so shape themselves that the individual breed and variety Standard will be necessary to the well-being of thousands of fanciers. Then the American Poultry Association should anticipate the wants and needs of the breeders and fanciers. He who cannot read the handwriting on the wall is indeed of poor sight.

A New York White Leghorn breeder has made arrangements with a fancier in Mississippi to place 1,000 eggs in incubators during January. The eggs will be produced on the New York farm and sent to Mississippi. The New Yorker's idea is that he will reap a big benefit from the sale of these early-hatched chicks, filling orders for exhibi-

tion stock for the early shows. Also that by this plan he can materially increase the size of his Leghorns. We think that the gentleman will be disappointed. This plan was given a thorough trial several years ago. A large number of Brown Leghorns were thus hatched and handled. They did not fulfill the mission for which they were intended. As exhibition pullets and cockerels they were a failure, the fall molt seeming to injure them, so far as development was concerned. The experiment was given a thorough trial for three consecutive years.

At the annual meeting of the American Poultry Association, at Auburn, N. Y., January 10th, history will be made. The American Poultry Association must either go forward or retreat. It cannot stand still. The great industry which the association has represented only in part must be given full recognition by the members present at this meeting. The committee of fourteen, whose report on the revision of the constitution of the association has been submitted, honestly labored for the betterment and upbuilding of the association. The responsibility now rests upon the members. If any member has anything for the betterment of the association let him go to Auburn and be heard.

An eastern firm announcing the arrival of a consignment of Orpington cockerels from England says: "They are, of course, larger than any grown in this country." We once asked a prominent judge why it is that the English fanciers take our American Wyandottes and Rocks and increase their size materially. He replied: "No warm nights over there. Chicks not kept in small brood coops, as they are here. Given an abundance of fresh air all the time. Made to rustle in the meadows and orchards. Fed but little corn, their diet consisting almost wholly of foods which produce bone and muscle, such as oats, etc."

The rumor that reaches this vicinity is that the salary for self and assistant [secretary and treasurer of A. P. A.] are designed for a certain gentleman in the middle west. The impression prevailing here is that neither will the office go to that gentleman nor will the salary of the office be placed at a total of \$2,000.—Farm Poultry.

Who is the gentleman? Will Farm Poultry please name him? Who designed this office and salary for any one man?

Commercial Poultry says that there should be no sectionalism in poultrydom. This in reply to Brother McReynolds, of the Southern Poultryman, who vigorously cries "southern judges for southern shows." We venture the opinion that notwithstanding Brother McReynolds' war cry Eugene Sites and Charles McClave will receive a warm welcome at Birmingham, Alabama, when they go down there to judge that exhibition this month.

This season we saw a mating of Light Brahma females and a Lakenvelder male. We asked the owner what he expected to get out of this unusual mating. "Can't tell yet," he said, "what

it will be—Columbian Wyandotte, Columbian Brahma or Columbian Plymouth Rock." "Or Columbian Lakenvelder," we ventured. For result, see petition to American Poultry Association two years hence.

The American Poultry Association need fear no outside interference if it will run its own affairs properly. There is much muttering and some talk of political work at the annual meeting this month. The American Poultry Journal believes that there is nothing political or otherwise which can stand against the American Poultry Association, well led, well organized and wide awake.

Gardner & Dunning, the well known Barred Rock breeders, recently sustained a severe loss. A large number of extra choice, early-hatched cockerels on the range were attacked by a vicious dog and fourteen of the number killed, many others being wounded. These were exhibition cockerels being reserved for the winter shows.

American Poultry Journal notes with pleasure the increased interest in Standard-bred poultry in the South. More shows will be held in that section this season than ever before, and there is activity all along the line. The South has many advantages as a poultry raising section, which fact fanciers down there seem to realize.

If the signs of the times are not deceiving there will be a great and magnificent showing of Columbian Wyandottes at Madison Square Garden, January 1-5. The question as to "who is who," which is now so greatly agitating the minds and mouths of several gentlemen, will be settled, for a time, at least.

Harry Lamon is going to cease managing the other fellow's poultry farm and will conduct one of his own. There may be a position more difficult than the one wherein a man is supposed to manage a modern poultry farm, but it has not yet been discovered by the most diligent searcher after work.

Mr. Fred E. Pile, president of the Cleveland Fanciers' Club Company, writes that the Cleveland show, January 14-19, will outrank any of the former exhibitions held by the company. Special features, new and attractive, have been introduced.

The men who are crying so loudly that the American Poultry Association "should more fully represent the great poultry industry of America," now have a duty to perform. It is to be at Auburn, January 10th, and tell how this great reform may be brought about.

It is pleasing news which comes from Philadelphia that the Quaker City will this season hold a show and be in line hereafter. We hope to see Chester, Smith, Nevius and other of the war-horses back in the harness.

There is nothing in the report of the committee of fourteen to discourage Brother Robinson in his belief that the American Poultry Association will never be a benefit to the poultry industry.

POULTRY RAISING A PLEASANT AND PROFITABLE BUSINESS.

Take care of the poultry. How often we hear this remark. To take good care of poultry is not hard nor expensive work, only to do the right thing when it should be done; to have regular hours for feeding. Why, does not the farmer have a special time for feeding his cattle, horses and hogs? Then why not the poultry have their feeding hour, for soon they learn to come at a certain time, then will remain out on the range until within a few moments of supper time, then they come and are not content until they are fed. This is right. Poultry is one of the most profitable stocks on the farm; their returns come in daily; eggs are as good as cash any day, and eggs can be had every day of the year.

There are so many varieties of chickens that are good and some excellent layers. The variety one most fancies is sure to give best results, for we learn to care so much for them they are sure to have the best of care; warm houses, pure water, plenty of sound grain, clean houses, free from vermin, bestowed upon the right sort of chickens will repay many times. The right sort of chickens mean pure-bred stock mated for the best results.

There are so many good poultry journals and the advertisers are honest men and women who have a love for the beautiful; from these anyone can get a start. If you wish to begin on a small scale, get one pair of chickens or a setting of eggs. The foundation of one of our most successful poultry farms was from a setting of eggs. Think of

the fancy side of the question; hens that can pass through the show room, win a blue ribbon, then have close to 200 eggs to her credit in one year. Some do better than this, but this is great. Then the pleasure of owning a flock of beautiful standard colored birds makes one more content with life. The trees are divided, some apple, pear, peach, walnut, each beautiful, but a distinct variety; were they mixed, much of their beauty would be lost. So it is with chickens. One variety is good and useful, but to mix them we are sure to lose some of their good points. A few, well cared for, will pay well; to try to keep more than we can conveniently care for means loss. Present prices, both for fancy and market stock, rule high. No better time coming to invest in pure-bred poultry. A flock of common mixed scrubs will supply the family with groceries; half the number of pure-breds will supply the groceries and many of the luxuries. Then, too, if you are interested in some one variety you subscribe for journals, thereby getting better acquainted with how others succeed. Poultry work is an interesting and pleasant field of work. To hatch the downy little chickens that are so cute and watch them grow into those nice, big birds we see at the poultry shows, and then to see the blue ribbon on their coop is reward for days of care and watchfulness on our part. What others have done you can do. Early fall prices are lowest, then room is needed and old stock can be bought cheap, and 2-year-old stock is best to breed from. There is no better mating than when one side of the yard is two years old. Eggs from matured hens

hatch as well and stronger chickens; from some of these our strongest colored birds are hatched. Take good care of the poultry and they will take care of you is a very true maxim. Poultry is a pleasant and profitable work. Fresh eggs, nice chickens for the table. Fried chicken is good enough for anyone. Roasted chickens are great.

Abilene, Kan. Mrs. J. B. Jones.

SOME FACTS I FIND IN BREEDING FOR EGGS.

That the heaviest and most consistent layers are the early layers.

That April and May hatched chicks are to be preferred.

That my heaviest layers produce the strongest and quickest growing youngsters.

That heavy laying hens produce 80 per cent more chicks than ordinary layers. Their eggs being universally fertile.

That egg production combined with fancy points demands terrific culling.

That 200 egg daughters of 200 egg hens are but the products of breeding and trap nests.

That a 95 point pullet has laid 192 eggs in 10 months and was bred from a 228 egg hen.

That a 96 point cockerel, special for whitest bird in a show of 1,000 entries, is the son of the same 228 egg hen.

That the highest scoring hen I ever owned never laid an egg for 18 months.

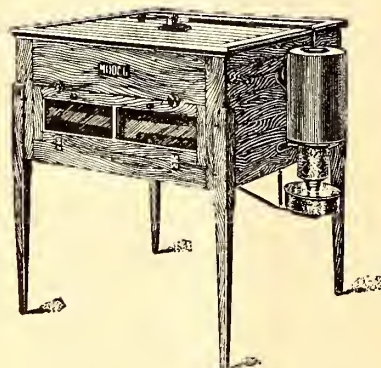

L. F. Van Orsdale.

To make a success of the chicken business the one who goes into it must be endowed with a certain amount of stick-to-it-ive-ness.

PHILLIPS' SECOND CROP CUT CLOVER

This is a very choice article. Crop being selected with the greatest care. We have our own mill right in the heart of the clover section of this state, which saves us exorbitant freight rates, thereby allowing us to give the trade a first rate article at a moderate price.

PHILLIPS' BALANCED HEN RATION

A well balanced feed for laying hens. Grains changed according to season. Very high in protein. The price of this is governed according to market changes.

IN ANSWER TO THE ARTICLE
"RHODE ISLAND REDS," BY
E. T. DeGRAFF, IN OCTO-
BER AMERICAN POUL-
TRY JOURNAL.

The natural tendency of mortal man is to err, even the best of them. A like tendency with the Rhode Island Red is to smut, even (rather especially) the best of them.

Smut in the undercolor of a Rhode Island Red is a foreign color, holding the same relative distinction it would in a white fowl. The displacement of this smut with pure red is the foundation of all that is fascinating in the breeding of this peerless variety, and the fond dream which has drawn from the pioneer breeders their good money and valuable time, for years before Mr. DeGraff or myself had a thought of the breed, has been the *pure red bird*.

I am very sorry to be obliged to admit that I have in the past gone on record as having bred good colored birds from off-colored ones, which I considered was all due to my superior judgment in mating. I am here today to say that the best birds I ever bred were from pure Red stock. The best birds that a man can get, rather I can get, come from careful mating of the undercolor, as regards the blending of two shades, the light and the dark, in undercolor, and an absolute soundness of either.

I want to say to the readers of Mr. DeGraff's article, that from my experience, a good bird from a smutty mating is a "sport" in every sense of the word. Of course, the breed of the mating may make a difference, viz., from clean progeny, and in this case careful attention in mating might give you some good colored chicks all through.

But with all this in your mind, what do you really want? Do you want to mate birds that will occasionally throw a clean one, or rather make the clean one the rule? Do you want to put your clean chick in the show, and have some great big chocolate bird, smutty under wear the blue? Do you want to breed beef or business?

Out of all the love and interest I have for the breed, I ask you to specify at all time the pure red bird in your purchases, don't buy anything else, you'll get enough of that kind with the best for the next five years to come. If you can't buy such birds, get eggs from them, if you can get eggs from them, breed Polar bears, it is much more to your credit as a breeder. Don't buy, sell, breed or covet any Rhode Island Red, either male or female, with smut in the undercolor. W. S. Crandall.

Middle Falls, N. Y.

Do not labor under the mistaken idea that because the weather is colder that lice are not as destructive as in hot weather. The same precautions should be taken to keep them down as during the spring and summer.

You cannot tell whether you have prize-winners in your flock or not unless you make an exhibit at some show. Get your birds in condition and find out how good your stock is.

The price of eggs has been higher during the past summer than for many years, and the coming winter is going to be a good one for those who make a specialty of eggs for market.

SHARPLES' BUSINESS DAIRYING FREE

Contains all the money-making points of dairying. Among the subjects treated you will find How to Feed, What to Feed, When to Feed, What Foods Produce Most Milk, How to Take Care of Milk-Producing Foods, How to Feed Silage, the Care of the Milch Cow, and many other profitable and practical suggestions that help swell the profits of the dairyman. With the book we will send additional information telling you how and why you can get the most out of you milk by using the

Sharples Tubular Cream Separator

We guarantee that with a Tubular you can get 50 per cent more cream over the old pan method of skimming, and 6 per cent over any other cream separator made. Sharples Separators get all the cream and the Tubular is the easiest running, easiest cared for, and easiest kept clean. There is just one tiny piece in the bowl, the milk can is low and handy, the bearings are self oiling. Write for the "Business Dairying" at once stating number of cows you keep. Ask for booklet D. 205

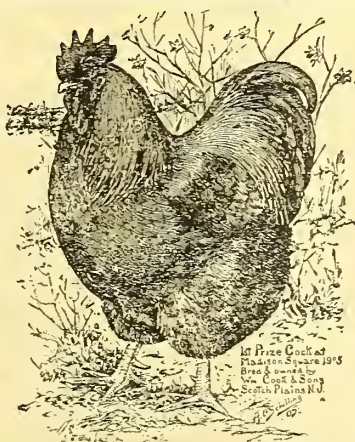

Mr. S. L. Boyer, Venetia, Pa., says "The Tubular makes me \$255.00 yearly."

Originators of all the Orpington Fowls
A FEW WELL KNOWN and ESTABLISHED FACTS

No. 1. That we are the largest, oldest and most successful exhibitors and breeders of prize and utility poultry in the world.

No. 2. That we have won over 9000 cups, medals and prizes in nine different countries, and have absolutely unbeaten records. One of these being 48 1sts, and 36 2d prizes at three showings at Madison Square, No. 3. That we as originators of all the Orpingtons naturally have the best and are considered by all well informed persons to be headquarters for all the ten varieties of the Orpingtons.

No. 4. That our farms contain the largest and best selection of Orpingtons in the world. No. 5. That our stock are hardier and more prolific than any other breeders, as we have four distinct strains of each variety. No. 6. That our guarantee, backed by a reputation of 34 years' standing, is the most liberal one ever given. We not only guarantee satisfaction at the time of purchasing but afterwards as well.

No. 7. That by keeping an immense number of birds with the price, etc. Send for our illustrated catalogue. Free with the history of all the Orpingtons. We edit and publish the Orpington Poultry Journal; 60c. yearly, per month 5c. Inspection of farms cordially invited. Trains met. Advice free. Eggs from the finest Orpingtons in the world, all varieties, \$10 per setting; others \$5 and \$2.50. Wm. Cook & Sons, Box A, Scotch Plains, N.J.

Hanchett's Line-Bred
Buff Cochins

No other strain possesses such perfect Cochins form (that massive globular type)—such profuse yet soft feathering—such color—such size. Bred in line for 13 years. Parties wanting the best to be had—to win or breed winners—should write for our handsome free booklet and state wants.

H. N. HANCHETT,
Jackson, Mich.

**SOME FACTS, AND SOME FANCIES,
AND SOMETHING NEITHER
THE ONE NOR THE OTHER.**

Picked Up by Rev. C. E. Petersen.

Gov. Brady, of Alaska, tells a story about Swiftwater Bill Gates, a noted Klondike character.

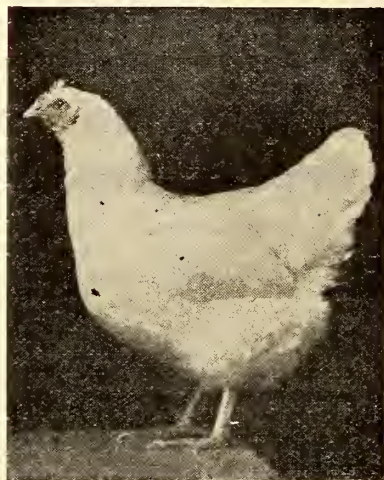

After Gates got to Dawson he was smitten by the charms of a woman who sang in one of the concert halls there.

She favored his suit at first, but later rivals with more money than Gates had come into the field.

Swiftwater Bill became alarmed. He saw his prize slipping from his grasp.

He learned that the woman he desired to wed detested the canned goods and pork and beans that formed the principal diet of the community, and lived principally on eggs, of which there were a few cases in Dawson. Thereupon he went out and bought every egg in Dawson.

"Now, my honey," he said that

White Plymouth Rock hen No. 15, which laid 85 eggs in three months and a half (44 eggs in 47 consecutive days). Bred by Victor D. Caneday, Box A, Taylor's Falls, Minn.

night; "you must either marry me or go without eggs."

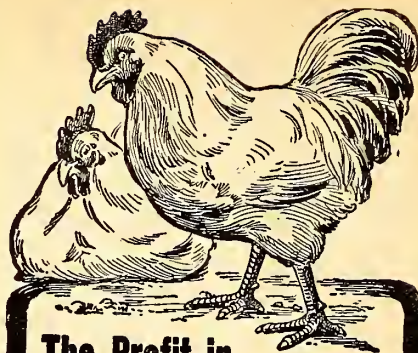

She married him.

Washington, Oct. 2—(Special).—"The G. A. H.," otherwise the Great American Hen, is to be made still greater through the means of the government school established especially for her education.

Ethically, the American hen is as cultured a fowl as can be found on the globe, but an examination of her characteristics on short range shows that she retains certain old-fashioned beliefs which can only be eliminated through a course of training under a painstaking tutor.

This is an age of specialization, and while nothing has ever come along to rival the Great American Hen as an egg producer, she has, if she only knew it, been relegated to the past as a mother by the incubator.

Therefore, Uncle Sam has started a hen school just outside the city of Washington, D. C., with one Slocum, an eggologist of fame, at its head, where the hen will be taught to specialize in egg laying, and at the same time to forget all about her desires to set—a

**The Profit in
POULTRY RAISING**

To make a market bird consume a large amount of fattening food with **increasing appetite**, is to insure good returns at marketing time. Here is one more place where Dr. Hess Poultry Pan-a-ce-a shows surprising results. To use this wonderful tonic as directed, is to see an immediate improvement in the condition of the fowl.

**DR. HESS
Poultry PAN-A-CE-A**

is the prescription of Dr. Hess (M.D., D.V.S.), and is a guaranteed flesh-maker and egg-producer. It contains a peculiar germ-destroying principle that makes Pan-a-ce-a different. Besides the tonic to the digestion, and supplying iron for the blood, it also cleanses the system and absolutely kills bacteria, the source of disease. Dr. Hess Poultry Pan-a-ce-a is endorsed by the leading poultry associations in United States and Canada. **Costs but a penny a day for thirty fowls and is sold on a written guarantee.**

process which seriously interferes with laying.

It is a great mission which those in charge of the school is undertaking—nothing less than to persuade the hen that man is perfectly capable of attending to the hatching end of the business if she will devote her time and energies to producing the eggs.

The fundamental principle upon which Professor Slocum's work is based is found in the universally recognized fact that there is, deep down in the heart of every creature, a desire to excel.

He holds, therefore, that if one hen can be trained to lay incessantly, with no interruption for setting, other hens thrown into daily scholastic contact with this pacemaker will be stirred with a desire to excel her accomplishments.

Thus, in a short time, the entire community of hens will be engaged in a laudable egg-laying contest to which they will so assiduously devote themselves that they will abandon all thought of setting and hatching.

Heredity is looked to to care for the rest.

The eggs produced by these egg-laying rivals after being hatched in incubators are expected to present a generation of pullets inspired only with an ambition to lay.

Thus in time a race of hens will have been secured that will know no more about the cares of brood-raising than they do of Sanscrit, and cares as little, and in this devious way does the government move to crush the egg trust, for with hens laying day and night throughout the country there can be no cornering of the market with resultant sky-high prices.

In time some one else will teach the G. A. H. the waste of time, energy and extravagance of sporting a new suit of feathers once a year, and that, with a little care and tidiness, they may be made to last for at least as long as she is busily engaged in her laudable ambition to excel in egg-laying which, when ended, some one else will take off her feathers and save her the trouble. Nothing like progress.

A Duck was one day bewailing his fate to a Rooster.

"Here I work all year round," said the Duck; "lay larger eggs than the Hen, and one a day when I am laying, and still there is no flattering poetry written on my efforts toward feeding mankind."

"Well," said the Rooster, "you lay the egg and walk away quietly. Why don't you do like the Hen—advertise?"

Moral—Call attention to yourself and your business. Your competitor won't do it for you. The world won't know you are doing business if you don't cackle about it.

Be a Hen, not a Duck.

POULTRY AT THE KANSAS STATE AGRICULTURAL COLLEGE.

The experiments that have been carried on at the Kansas State Agricultural College within the past few years in all departments have been of great value to the State. The work with poultry is rather new, and in fact is not yet made by the authorities a regular department.

The work done, however, has been so valuable that the Regents have each year

EVERY atom of matter that the hen puts into an egg, must come from the food she eats. She can't get it in any other way.

So, it is perfectly clear that if you expect to get *more eggs*, you must give the hen materials to make eggs from—food containing more of the elements that enter into egg making, in an easily digested form.

There is no room for argument there.

But what *kind* of food is that?

Where will we find it?

Well, it so happens that not only the egg, but the greater part of the fowl's body—bone, muscle and feathers, is made up of what the professors call "*protein*."

Unfortunately, it also happens that protein is found in only *small* quantities in the grains and vegetables usually fed to fowls, but in exceedingly *large* quantities in animal matter or food.

That explains why fowls of all sizes and ages, from the youngest chick to the oldest rooster, love worms and hogs above everything else.

They crave *animal food*, because Nature's instinct teaches them that they need it for growth, development, vitality and egg-making.

* * *

Of course your hens cannot get worms and hogs in winter or when they are confined to close quarters.

You, therefore, must give them this protein food in some other form, if you hope to get the best results from your flock.

You can get this protein in its most *digestible* form—most nearly like the worms and hogs your hens love so much—by simply taking the trimmings from your butcher's block, the bones of beef, pork or lamb with gristle and meat adhering to them.

They make a perfect substitute—not only because they contain the same food elements as the worms and hogs, but also because, in its fresh, raw state, it is as easily *digested* and as greatly relished as are the worms and hogs.

In effect it is not something that is "almost as good," but it is identically the same.

It "balances the ration" by supplying what is lacking—or is very scarce, in the grain you feed.

It has more than four times the egg-making value of grain and is rich in the elements needed for making bone and muscle and so promoting rapid growth and developing as well as improving the vigor and vitality of the entire flock.

That is why fresh-cut raw bone—doubles the egg yield by giving the hen egg-making material in its most easily digested form;

—makes more fertile eggs, produces larger hatches and livelier

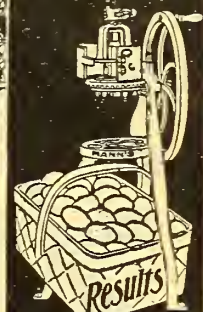

Don't be persuaded, however, that "bone meal" or so-called "beef-scrap," can take the place of *raw bone*.

It is the *live* worm the hen craves, not a dried up carcass, and it is raw, fresh animal food that does her the most good and is the most easily digested.

If dried, or cooked or embalmed or preserved it naturally loses a large part of its value.

Neither should you class raw bone with the advertised "poultry foods" or "condition powders" made from secret formulae, for which such extravagant claims are made. Your hens do not need these compounds or medicines to make them lay, if they have the right kind of materi-

To prove to you what it will do we will send you any size or style of Mann's Latest Model Bone Cutter that you may select from our catalogue on

Ten Days Free Trial

(No money in advance)

You simply select the machine you want to try—and we send it to you. No red tape, no "deposit," no money in advance.

If it does what we claim it will do, you buy it.

If not you return it at our expense.

Can we make you any fairer offer than that? * * *

You will find that Mann's Bone Cutter turns easily, cuts rapidly and produces better poultry food than any other.

It turns more easily than any other because its self-governing feed *automatically* adjusts the cutting to your *strength*, so that any one can use it.

It makes better poultry food than any other because it cuts not only all green bone, but also all adhering meat and gristle—wasting nothing and leaving no chunks or slivers.

Its open hinged cylinder takes large bones and can be easily kept clean.

It is strong and durable and requires few repairs.

But try it and see—that's the way to tell.

Send Today for Catalog and make your selection of machine for trial.

We will do the rest.

TEN DAYS FREE TRIAL

No Money in Advance.

MANN'S LATEST MODEL Bone Cutter.

chicks, because it makes hen and cock more vigorous, fuller of vitality, so that the eggs have more life in them;

—develops earlier broilers and layers and makes heavier market fowls, because it promotes growth by supplying the elements most needed for making bone and flesh and muscle;

—makes red combs, bright eyes and glossy plumage, because it gives the fowls that *variety* of ration so necessary to their health and well being.

No matter what line of poultry raising you are in, fresh cut raw bone will help you get *better* results and make more money.

And the beauty of it is, it costs you but little more than the labor of cutting it. * * *

al in their food.

Neither do they need the ready mixed foods whose composition you don't know, and which you would consider extremely expensive if you *did* know their ingredients. You buy them "on faith;" you don't know what is in them.

How much better to use raw bone, and mix your own ration, using the cheapest grains and yet being sure that you have the best and most economical of all rations.

* * *

Of course the bone must be properly cut, but that is easy with

Mann's Latest Model Bone Cutter

We want you to try this machine and we make the way easy for you.

pratts ROUP CURE

What It Does

Positively cures and prevents roup, colds, canker and diphtheria in chickens, turkeys and pigeons. Pratts Roup Cure is absorbed at once by the blood, purifies the system, allays inflammation, reduces fever and acts as a tonic. No other roup cure is like it. No other roup cure is as good. Ask for Pratts and insist on getting it.

25¢

Do You Know

That a roup hen never lays and that the germs develop very slowly? Look out for all mopey and sneezing birds. Soon the heads will swell and there will be an offensive discharge from the eyes and nostrils. That's roup, and unless checked at once, it will destroy your flock. Give quick Pratts Roup Cure and disinfect with Pratts Dip.

Are Your Hens Worth 25 Cents?

Don't wait until your flock is infected. Prevent roup, colds and diphtheria by giving them Pratts Roup Cure. Do it now. It's the best investment you can make. Pratts Roup Cure is a fine powder; and you simply mix it with the drinking water, the fowls drink and are cured. A 25-cent box makes 15 gallons of roup medicine, a 50-cent box makes 38 gallons, and it will mean life to your flock. You cannot afford to be without it. If your dealer does not keep it, write us at once and we will send you to one that does.

Do You Want More Eggs?

READ THIS:

"I have used Pratts Poultry Regulator for three years and would use no other. During February, 1906, my 32 chickens laid 503 eggs, the result of using Pratts Poultry Regulator."—L. Weidel, Stroudsburg, Pa.

Pratts Lice Killer (powdered form) kills lice and saves you money. Packages, 25 cents and 50 cents.

Send to-day for Pratts "RHYME AND REASON" hook. It's free.

PRATT FOOD CO., Philadelphia, Pa.

Pearl Grit

The Great Egg Producer

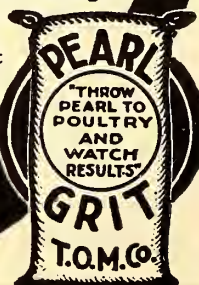

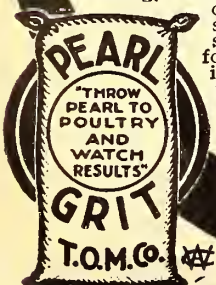

To be productive fowls must be healthy and active. The system must be full of vigor and the vital forces strong. Evidences of this condition are bright, clear, piercing eyes, scarlet combs, fresh looking plumage, smooth legs and a sprightly air. One of the secrets of poultry health is plenty of good grit. Now there is a great difference in grit; the best kind and the sort that produces the conditions above described is grit that not only has grinding, but also nourishing properties. That's why Pearl Grit is so valuable for poultry—

IT IS A

Double Purpose Grit

The poultry keeper who feeds Pearl Grit accomplishes two things in one: he gives his fowls grinding material and at the same time supplies a nourishing substance from which the birds assimilate material for egg-making, shell-forming, feather building, growth of muscle and strength of sinew and bone. Chemical analysis shows that Pearl Grit contains, in considerable quantities, the elements needed for the above mentioned vital processes. It is clean, hard, sharp, and white, without waste or dust. Try it. Write for free booklet "True Grit" it's full of valuable information. Write for it today,

THE OHIO MARBLE CO.,
Box 209, N. Wayne St.,
Piqua, O.

practically doubled the appropriation so that this year considerable valuable work is expected. A very practical man has been employed to give his whole time to the poultry work, and to give immediate attention to all experiments. The whole is under the supervision, however, of Prof. Oscar Erf of the Dairy Department, with Mr. W. A. Lamb, the assistant in charge.

Some very important experiments are now in progress, and others are to be taken up soon. Possibly the one now being carried on promising the most interesting results is a feeding test for finding (a) which combination is most profitable to feed; (b) to find which combination is the best for egg production. Six (6) different pens are in this test, and the feeds are as follows: Pen 1, beef scraps and corn; Pen 2, casein (dried milk) and corn; Pen 3, wheat, chops, casein, and corn; Pen 4, wheat and corn; Pen 5, millet and corn; Pen 6, beef scraps and kaffir corn. This experiment will end February 1st, '07, and by March 1st the report will be ready for publication.

Another test is with five (5) pens of different breeds being fed the same food, to determine which breed is the most profitable for egg production. Of course it may not be safe for the experimenters ever to publish any results on this as their lives might be in danger.

Another very interesting experiment has been under way for some time to determine how long a male will influence the offspring from hens. To make this test a White Brahma rooster was put in a pen with White Leghorn hens, left with them for four weeks and then the hens were left without a male in the pen for 20 days when a White Rock rooster was put in the pen. Ten days after this sixteen eggs were set, and five chicks of the sixteen showed plainly the marks of the White Brahmas breed, while the others showed marks of the White Rock. Eggs that were set one day later and two days later produced chicks with no marks of the Brahma.

Another test which is being carried out here, as at many other stations, is to determine how long the eggs will be fertile after the male has been removed from the pen.

Another test being made is to find how long eggs will be kept in a temperature to 60 degrees Fahrenheit, and for this test clean fertile eggs, clean infertile eggs, dirty fertile eggs, and dirty infertile eggs are being used.

On November 1st an experiment will be begun on twenty-four varieties of hens furnished by the general public. They will all be fed and cared for alike and forced for egg production, each hen to be trapped and credited with eggs laid, a general record kept of amount and cost of feed for eggs produced. The experiment will end November 1st, '07.

A very interesting feeding test will begin shortly with six pens of chickens. Five capons will be stuffed and five will be fed from crates, five cockerels of the same breed will be stuffed and five will be fed from crates, five pullets also of the same breed will be stuffed and five will be fed from crates; thus the tests will be made for methods of feeding, and also to determine whether capons, cockerels or pullets will produce the greatest gain in the given time. The remarkable interest shown by Kansas farmers in the poultry business and the great magnitude of the

business and its financial importance justifies very extensive experiments here at the farmers' College. For the benefit of this business the experiments carried out here will be wholly from a practical standpoint with a desire of getting practical results, results that will be of use to the farmers of Kansas and poultry people generally who are working on any of these experiments. All parties able to submit from time to time to the Department here valuable data will confer a great favor. All correspondence should be addressed either to Prof. Oscar Erf or to Mr. W. A. Lamb.

HOW I CUT A CHICKEN'S HEAD OFF.

Cutting off a chicken's head was new business for me, and yet it had to be done and there seemed no one else to do it but myself. Company was coming that day to dinner and wife said we must have a chicken dinner, as the stake at the market was generally too tough and this was to be a special occasion.

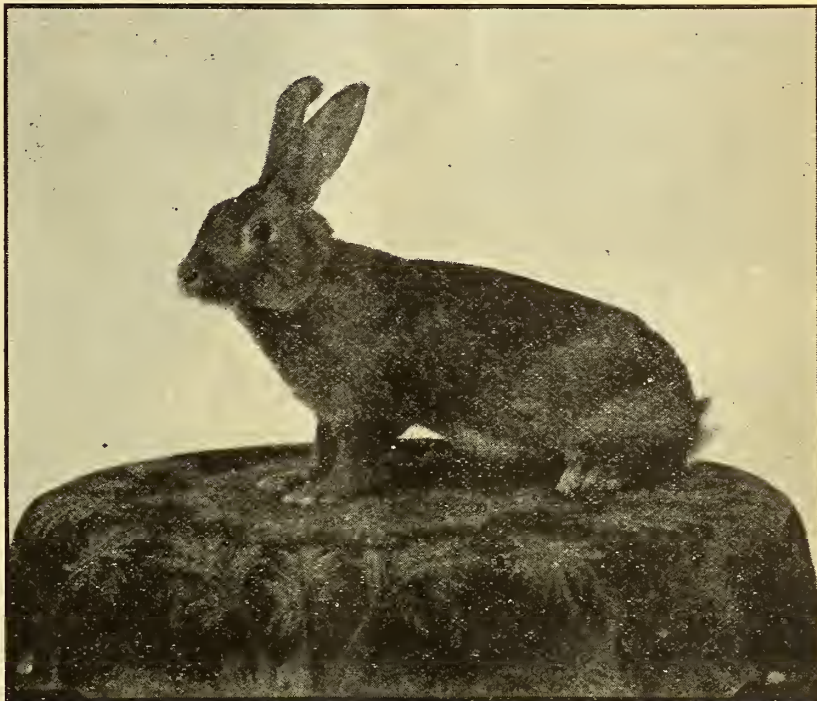

Accordingly I thought the matter over, and came to the conclusion that my neighbor would gladly take the chicken's head off for me as he knew how and I had never beheaded a chicken in my life.

However I would catch a year old fat and plump biddy which I knew had not been laying for several weeks and I also wished to make room for the young pullets which were coming on. Therefore I took a handful of corn and entered the park which contained my favorite biddies and bravely began to call, chick, chick, chick, and scattered a little corn round about. The game was dead easy. I soon had my eye on one biddy that was not quite up to the standard and making a lunge at her unawares I soon held her a captive prisoner. She struggled for freedom and vehemently objected to being handled in so rough a manner; however, I held on to her. My next effort was to call up my neighbor when lo, and behold, his young daughter said that her father was away and would not return until next day.

Surely I was in a quandary and knew not what to do. But something must be done and that right away quick. I looked about for other executioners but none could be found. My wife came out and wanted to know if she could assist me, to which I replied in a sorrowful negative.

Awaiting her return into the house I sought the axe and looked about for the execution block. I then placed biddies neck on the block against her protestations which were all in vain. I then lifted the axe on high, when alas, courage failed, and the job was not so easy as it looked to be. Then biddy was carried about under my arm for some time while we were looking for some one who was more used to cutting chicken's

block, again the axe was lifted up on high—well, I declare it seemed utterly impossible to bring that axe down to save my life but it must be done, as precious time was being wasted. By the third attempt the executioner was getting bolder and more determined, the axe was raised and came down with much force on biddy's neck slick and clean. No guillotine of the French revolution ever severed a neck more completely.

Peter Pan, first prize Belgian Hare buck, West Virginia State Fair, 1906. Bred and owned by Joe R. Counihan, Wheeling, W. Va.

heads off, but as luck would have it no man appeared in sight. School children were going to school, and they were the only ones to be seen on the streets.

"Isn't that chicken ready yet?" came a voice from the house.

"No, but it soon will be," was the determined reply.

Again we wandered up to the execution block with firm resolution; again biddy's neck was stretched out on the

"Well, that's easy," said I to myself, after biddy had finished flopping about for several minutes, "guess I can do it again without any neighborly assistance next time." Feeling somewhat elated over my success, I even told a friend that I had cut a chicken's head off that morning. In a matter of fact way he replied, "Oh, that's nothing, I have cut many of them off in my day," to which I made no reply. L. A. Peirson.

First N. Y. (Madison Square) cockerel, 1905. Bred by W. E. Bright. Three of the 1st prize winning cockerels at Madison Square during the last 5 years have been Grove Hill birds; showing only 4 times.

America's Largest and Best Shows Have Been Won By

Bright's BARRED P. ROCKS BROWN LEGHORNS

Including New York, Boston, Chicago, Philadelphia, Washington, Toronto and others.

That they are the best is the verdict of two World Fairs—Pan-American and St. Louis Expositions.

Our strains are bred equally as much for utility, vigor, size and hardy constitutions as for beauty.

Our prices are as low as the lowest when quality is considered. Some grand breeders for sale at low prices for sixty days. Come first and get the pick.

An Open Secret

It is an open secret among poultry raisers who have been successful that food is not all that makes hens lay. Often times even the greatest care and attention to proper feeding will not produce eggs at this season of the year. Such a condition is invariably due to digestive difficulties and sometimes disease. Dr. Hess Poultry Pan-a-ce-a meets this condition. It is a tonic, increasing the powers of digestion, supplying iron for the blood, cleansing the liver, arousing the egg-producing organs, reddening the comb and brightening the feathers.

DR. HESS Poultry PAN-A-CE-A

is the prescription of Dr. Hess (M. D., D. V. S.). In addition to increasing egg production it cures and prevents poultry diseases. Besides being a tonic it has a special property peculiar to itself—that of destroying infection, the source of so many poultry diseases. It bears the indorsement of leading poultry associations in the United States and Canada. Costs but a penny a day for about thirty fowls, and is sold on a written guarantee

LUX-OIL • A Dependable Kerosene For Incubator Use

If you ever try it you will use no other. It gives you a good strong flame that stays the same until the last drop is gone—that's why it is dependable. Notice these points:

You don't have to watch your incubator. It produces more heat. It MUST burn with a Uniform Flame. It does not smell or soot.

There's a reason. LUX-OIL IS ALL OIL.

It is specially prepared from Premium Pennsylvania Crude Oil at one refinery; is filtered through 26 feet of fuller's earth; has a gravity of 50; is better than the best kerosene. Put up in 5-gallon sealed cans, backed two to the case. Price \$3.00 per case. Order today.

For Sale by all first class dealers. If your dealer does not handle, order direct.

Marshall Oil Co., Factory and Laboratory, Marshalltown, Ia.
 Station: Lincoln, Neb. Fargo, N.D. Oskaloosa and Mason City, Ia.

VASS' Buff, Black and White ORPINGTONS

are still in the lead. I will offer all my this year's breeding stock for sale at reduced prices to make room for my young stock. I was the first importer of Buff Orpingtons in the United States, and I am sure I have a strain of Orpingtons equally as good or better as there is in this country. Vass' strain is known the world over, and I can give you bargains in young or this year's breeders in any of my varieties. They have won the highest honors at World's Fair, Madison Square Garden and many other leading shows. Write for prices. Circular free.

C. E. Vass :: Washington, N. J.

WORMS AND BUGS AND YOUR POULTRY PROFITS.

Old Mother Nature probably knew what she was about when she gave to cock, hen and chick an insatiable appetite for worms and grubs and bugs.

We may not approve of the taste of the hen which gobbles up a nice juicy grub or the "early worm" with a cluck of satisfaction.

But the more we learn about henology and the physiology of fowls,

The more we see wherein she shows good hen sense in grabbing every bit of animal food that comes her way.

She—and all her relations on both sides of the house—crave such food, because they need it.

We are going to show you why.

The modern hen—the bird we are forcing every year to lay more and more eggs—has developed into a pretty fair sort of egg-making machine.

The food she eats goes first to make blood, and muscle, and bone, and fat for her own body. Then if she is in the right condition, and the food is of the right kind, the rest goes to making eggs.

But mark this:

The best hen in the world can't make eggs from thin air;

The egg isn't created in her ovary in some mysterious manner from nothingness;

But every ounce, every iota, every atom in the egg comes directly from the food she eats.

Like every other machine you have to feed the raw material in at one end, to get the finished product at the other.

Now, it happens that the hen's bones, and muscles, and feathers, are all made very largely of the same chemical elements that an egg is made of.

A group of these elements, which make the white of the egg and the lean meat and which enter very largely into the bone and almost exclusively into the feathers, are called "protein," by the professors who know all about such things.

Her fat—which you don't care about in your laying hen—comes from another group of elements called "carbohydrates."

And it also happens, in the wise dispensations of Providence, that protein, which the fowl so greatly needs in sustaining life, in perpetuating her kind, and in providing her lordly master with omelettes and custards,

Is the food element that is scarcest in the vegetable world.

Wheat is rich in protein; clover has a fair share of it; oats has some, but corn is largely a fat-making food—and altogether, the grains usually served to Mr. and Mrs. Chicken and their family of chicklets, are sadly deficient in what they most need—protein.

But the worm and the bug and the grub are composed almost exclusively of protein.

Do you wonder, then, that fowls go crazy with delight when a nice fat worm comes squirming into sight,

Or that they chase a juicy bug or grasshopper clear across the poultry yard?

Just suppose you had been kept on a steady diet of hoeecake, cornpone and Indian pudding for three months?

What would you do to a nice porterhouse steak if you got a chance at it?

Well, that's why poultry needs animal food in some shape or other.

Of course, fowls get some protein from the grain they eat,

But under even the best conditions, not as much as they ought to have;

Not as much as they can use to advantage.

Consequently poultry-raisers—wise in their generation—began a good many years ago to hunt around for something that would take the place of the wild meat the fowls captured in the chase in the good old summer time.

They didn't feel like buying porterhouse steak from the Beef Trust for even their best hens,

But they knew that they could not get the best results, so long as their flock lacked animal food.

Finally a genius who had the faculty of putting two and two together so as to make four,

Examined the make-up of fresh, green bone—such as comes from the butcher's block—the trimmings—bones of beef, pork or lamb, with adhering meat and gristle—

And found that this bone contained in almost the exact proportions, the very food elements needed in place of the worms and bugs the hens couldn't find in the winter.

More than that:

It was soon demonstrated that the protein and other food elements in green bone, were in an exceptionally available form—

That is, poultry could utilize it to better advantage, digest it more easily, and so get more good and quicker results from it.

Probably this is partly due to the

fact that poultry relish green bone so much;

For in all animal life a thing that tastes good is more easily, more quickly and more thoroughly digested, than is food that may be equally nourishing, but not so palatable.

It isn't hard to see, then, why fresh-cut green bone has given such phenomenally successful results to poultry raisers, the world over.

There's no "hocus-pocus," or mystery or "patent medicine" about it.

It simply is the most available food product that has yet been discovered to supply fowls with the elements most difficult to get from grain and most needed

- to make bone
- to make muscle
- to make feathers
- to make eggs
- to maintain health, vigor and vitality.

That's why green bone doubles the egg yield;

(It contains more than four times the egg-producing value of grain.)

That's why green bone makes eggs more fertile;

(It tones up the entire system and fills the head of the flock with vim and vitality.)

That's why green bone makes stronger, livelier chicks at hatching;

(Bone-fed hens lay eggs with life and vitality in them.)

That's why green bone develops earlier broilers and earlier layers;

(It promotes growth and the development of bone and muscle by providing abundant material for making bone and muscle.)

That's why green bone makes heavier market fowls;

(It gives a good frame work to start with and helps lay on heavy flesh.)

That's why green bone makes red combs, bright eyes and glossy plumage;

(It gives a tone to the entire system of the fowl that nothing else will.)

That's why it will double your profits.

(It has done it for thousands of others.)

The question of winter egg-production is of vital importance to every poultry-raiser.

You want eggs for market when the prices are highest;

You want eggs when eggs are still scarce, for early hatching.

We said a while ago, that the hen is largely an egg-making machine.

And she is.

If she is kept in proper working order

And is given the proper materials with which to make eggs,

She can't help laying, even should she want to help it.

If you comply with these two things, you'll have eggs in abundance all winter long.

There is no one thing in the world that will do so much toward putting the average hen in laying condition,

And toward giving her the necessary materials for egg-making,

As fresh-cut green bone.

Of course green bone is not a cure-all—not a panacea for all the ills of poultry-keeping.

It won't rid fowls of lice;

It won't stop up the chinks in the

What To Do To Get Winter Eggs

Winter egg getting is a question of feed.

Eggs are largely protein. Hens need protein.

In summer they get it by catching bugs and worms.

They can't get bugs and worms in winter.

To get eggs you must supply egg materials.

Try Darling's Lean Meat Protein Feeds

WE'VE been furnishing egg making material to a good many hundred poultry raisers for a number of years now.

Of course we don't claim to sell all the poultry food that is sold. But we do claim to sell our share—a good big share—and we are selling to a class of buyers that know the kind of feed that pays.

And here's another thing we're rather proud of: We have a long line of regular year after year customers.

They are result getters.

They know the kind of feed they want and they know where to get it.

You can buy all sorts of poultry foods, put up in all kinds of attractive packages, and sold under wildly extravagant claims at fancy prices.

There's a good deal of mystery about most of them. You are asked to buy them on faith. Neither you nor anybody else except the maker knows what they are made of.

That is not the kind of egg making food we have been selling to the poultrymen of this country.

The fact is, there is no better egg making material to be had than straight lean meat and bone, as all well posted poultry raisers know.

They have all the egg ingredients. There is no mystery about them. Every poultry raiser knows, or ought to know, that feeding lean meats and bone pays and pays big.

That is the class of poultry foods we are selling.

Take, for instance, our Beef Scraps. They are simply lean meat. Not any better than a piece of beef you can buy at the market. But

you can't afford to buy steaks and good cuts to feed your hens. We collect and prepare lean meat scraps and sell them at a price, you can afford to pay.

There is but little fat but a great deal of lean. We guarantee them to run over 60% protein—unquestionably the best protein feed on the market.

And we guarantee the Darling Beef Scraps to be fresh and pure. There's no waste. Your hens will eat every morsel of it.

If you have ever fed any of the Darling Scraps you know how greedily the hens eat it and how the good results are sure to follow.

We manufacture and sell other foods. There is no mystery about any of them. Either they are like the Beef Scraps, largely protein feeds, to help along egg getting, such as our special Laying Foods, or they are adapted particularly to some other branch of the poultry business.

Every Darling Food is a special purpose food. They are scientifically prepared—that is, compounded and balanced with all the necessary food elements, so they do work out the particular results desired.

Darling's catalog will give you the particulars on these special purpose foods.

It's the poultryman's own—full of pointers. Nothing listed but standard things, the best of their class.

Don't fail to write and receive a copy. We are prepared to send catalog as well as ship goods from either Chicago or New York Address nearest house.

Darling & Company, Box C, Long Island City, N. Y., Box C, Union Stock Yards, Chicago.

poultry houses which let in the draughts;

It won't keep out weasels and skunks;

It won't make a standard-bred hen of a dunghill pullet;

It won't cure cholera or any other disease;

It won't take the place of judgment and prudence and common sense in managing a flock;

But

It is an indispensable adjunct to the poultry man who expects to get the best results from his fowls.

You can get eggs and grow fowls without it,

But you cannot get the best results and the biggest profits, unless you use it.

There is no doubt about it.

And the beauty is, it costs so little.

It cuts down your grain bills, but costs you little more than the labor of cutting.

It seems strange, doesn't it, that there is a poultry-raiser anywhere, who is not using fresh-cut green bone.

But, don't, we beg of you, get confused on the question of feeding protein.

In all foods, for mankind, animals and fowls, a very great deal depends

upon the condition in which the food is used.

The good the fowl or animal gets from its food depends upon how thoroughly it can digest and assimilate and utilize it.

Well, if you watch the cock and the hen and the chick, you'll see that

It's the live bug, and the squirming worm that they go after.

In a pinch we suppose they might eat a dried-up grasshopper, but not with the relish nor with the good that they get from raw animal food with the stimulating effect of real life still in it.

And it's the same way with the animal food which you use as a substitute for the live bug and the squirming worm—

Fowls relish it more, and it does the most good, when it is fed in a raw, uncooked, fresh state.

That's why "bone meal," made from dried bone, and so-called "beef scraps," made from anything and everything that the packers can't find any other use for, fail to give the results that raw bone gives.

Even if the mixture called "beef scraps" is really made of beef—the steaming, and cooking, and embalming, and preserving, and drying process through which it goes, naturally destroys a large part of its value.

The ready-mixed poultry rations on the market, made up of screenings and cleanings from grain with a large dose of sand to give it weight, is like the "beef scraps" in that you have to buy it solely "on faith."

You don't know what is in it. If you did know its ingredients you would see that it is a mighty expensive poultry food when compared with raw bone—especially when you consider how much more valuable raw bone is.

The best plan is to mix your own poultry ration, using raw bone and cheap grains.

You then know what you are feeding and exactly what you are paying for.

And you'll find that you have not only the most productive, but the cheapest poultry ration.

In her normal condition the hen does not need medicines.

Use fresh-cut bone and you will not have to pay high prices for powders made from secret formulae.

"RINGLET" BARRED PLY. ROCKS

In their purity. 500 grand birds, consisting of beautiful exhibition cockerels, exhibition pullets, exhibition yearling cock birds; also extra fine pullet bred cockerels that will produce exhibition pullets of the very finest kind. At the big Wisconsin State Show, January, 1906, in the largest and strongest class of Barred Rocks ever assembled in one building, our birds made nearly a clean sweep, winning more prizes than all our competitors combined, a record positively unapproached by any other breeder, east or west.

We will sell you as good a bird for \$5 as you can buy of any other breeder for \$10. Our \$10 birds can't be duplicated for less than \$20 to \$25. Our \$15 and \$20 birds would positively cost you from \$50 to \$75 in the east. We mean what we say, and we've got what we advertise. Send us your order direct from this ad; we positively guarantee every bird to more than please you or refund your money as cheerfully as we take it.

Sincerely yours,

A FREE TRIAL

FOR THE BEGINNER.

Will Poultry Raising Ever Become an Unprofitable Occupation by Over-Production?—Success Depends on Making a Good Beginning.

Will the business ever be overdone, that is will we breeders ever see the time when the markets will be flooded with eggs, or good stock for breeding purposes and will poultry raising be an unprofitable occupation? I don't believe that time is near at hand, do you? Now I would like to tell you why you should keep pure bred poultry. First, because a scrub hen will eat as much grass as a thoroughbred, and won't take on as much flesh, neither will they lay as many eggs and they will soon eat their heads off, if you have to buy most of the feed. For instance, the little scrub here that weighs 3 or 4 lbs. when matured eats just as much as our Asiatic breed that tips the scales at 8 and 9 lbs., so where is the gain by keeping scrub hens and not the pure bloods? In these days, we must use our own judgment as to what breed we like best, then let me say, study the Standard and the breed of chickens you have chosen, and try to get your flock as near to perfection as you can. Don't think because you have a few fair birds that your flock can't be improved; don't lose sleep at night worrying for fear you will flood the market, and you can't dispose of your surplus stock, should you be fortunate in raising a few hundred birds; such is not the case, as there are millions of dollars worth of poultry sold every

year in the U. S., and the market never has been flooded yet. The majority of all the poultry is raised on the farm, and mostly by women managers. There are thousands of acres devoted to poultry yards, and since the farmers have awakened to the vast sums of money to be made from the products of old Biddie. Year after year they are taking an interest in her and she is receiving better attention now than she did some years ago. The enthusiastic beginner is the one who makes poultry win as he must love his work if he wants to make a success. One great mistake we all make is, we want to get to the top of the ladder without climbing. We can't do it. Experience is the best lesson. Our success depends on making a good beginning. Start with one breed for the beginning, as you cannot handle too many hot irons at once, and as you become acquainted with one breed thoroughly, why then there is time to add different breeds to your yards. Begin with pure bred fowls, even if you can buy only a pair of good ones.

A setting of eggs is the cheapest if you have any luck at all. Success with poultry means what you get out of it. Some may raise poultry for pleasure, but about 99 out of every 100 are in it for the returns they get. The laying breeds are the one's that pay. Most every farmer's wife understands the setting and hatching part of the business, but still none of us are so far advanced in the business but what we can learn something. A great many of us make mistakes by thinking we know it all. Now if you want 200-egg or 300-egg hens in great numbers you must use the trap nests, leg band your laying hens and

keep a record of how many eggs she lays during the season. If she shows great laying qualities, don't sell any of her eggs, keep them for your own use. Don't let her get broody. See that she gets all the proper food she needs, and see that she has grit at all times to digest her food. You must breed for products or not at all. Sell all your non-layers, and give their room to old "Biddie" who is willing to pay for her keeping if you will only provide for her, viz; warm house during cold weather and proper food, and enough of it. No hen can do her best laying on a starvation diet.

I believe in extensive poultry raising and keeping and believe that 100 hens carefully selected and cared for, will prove as profitable as 300 hens just given ordinary care. In order to make a flock of hens pay they must have a variety of feed, such as mash, whole corn, wheat, oats, animal food, green stuff, some kind of grit, and always fresh water. Never overfeed your hens during winter; feed them regular three times a day if you keep them housed up and never feed them more than they will clean up in a short time.

Now, let me say in conclusion, don't make the mistake of starting with too many fowls, and try to do too much without experience. Anna M. Lemke.

Griswold, Iowa.

WATER GLASS EGGS. Preserve them for many months just as fresh as the day they were laid with **Willett's Water Glass Preserver**, the only sure way of preserving eggs to sell at high prices. Paroid Roofing-

-Read This Trial Offer on the Roofing That Lasts the Longest.

PAROID is the best ready roofing ever made. You can prove it, to your own satisfaction from a sample, but a better way is to use it. All we ask is that you try it, and we make the way easy.

Here's Our Offer:

BUY one lot of Paroid; open it; inspect it; apply it to your roof, and if then you are not satisfied that you have the best ready roofing made, send us your name and address, and we will send you a check for the full cost of the roofing, including the cost of applying it.

Is there any offer we could make you fairer than that?

Could we afford to make such an offer if we were not sure that Paroid is better than other ready roofings?

It is better; we are sure; and this is why:

Four things enter into the making of a good roofing:

The felt; the saturation; the coating; and the method of laying. Paroid excels on all four points.

* * *

The felt is the foundation. If it is not right to start with, no treatment of any kind can make it into a good roofing.

We know that our felt is right because we make it in our own mills (established in 1817.)

We make it because we cannot buy a felt elsewhere good enough for Paroid.

Other manufacturers who buy their felt in the open market—wherever they can get it cheapest—necessarily take big chances at the very start.

We couldn't give you the money-back guaranty we do if we did not make the complete roofing under our direct supervision.

* * *

Paroid roofing is not merely dipped in a solution, but is soaked in a water proofing mixture of our own, which renders every fibre of it—through and through—absolutely water proof.

* * *

And then the coating. Paroid is coated on both sides with a smoother, thicker, tougher and more flexible coating than is on any other roofing made.

There is no room for doubt about it. You need not take our word for it. Use your own judgment. Compare Paroid with other kinds. You will find that Paroid is the only roofing that doesn't

break when you give it a short bend. If you can freeze the various samples you'll have a still better test, and you'll find Paroid the only flexible roof in a zero temperature, while others crack like an icicle.

* * *

But even the best roofing must be properly applied.

In every roll of Paroid you will find a complete roofing kit, with a supply of square, rust-proof, water-proof caps. The only rust-proof cap made.

These caps are patented. You get them only with Paroid.

Being square, they give you larger binding surface and so hold the roof more securely.

Being water-proofed on both sides, they do not rust and work loose and cause a leak, as all other caps do, sooner or later.

* * *

And when the roof is laid, you not only have a good and durable,

but you have a sightly roof. Its smooth, uniform surface, makes it the best in appearance of all ready roofings.

* * *

And there you are: The best felt for a foundation; The best and most thorough water proofing saturation; The best and most flexible coating;

The most sightly ready roofing made; And a positive money-back guaranty.

Will you try it on these terms?

* * *

They are some of the reasons why Paroid has stood the test of time for the United States Government, for railway, factory, farm and poultry buildings.

It lasts longest. It gives best service. And we stand back of it. May we send you samples and prices?

E. W. Bird & Son, 13 Mill Street, East Walpole, Mass., 1413 Monadnock Bldg., Chicago, Ill.

WISEACRES POULTRY FARM.

We show herewith a photo of one of the large laying houses on Wiseacre's Poultry Farm at Croton-on-Hudson, N. Y. Mr. Whitty, the proprietor of this plant, is an enthusiastic advocate of the hen with an egg record, and to assist him in his work of keeping an absolute record of the number of eggs

200-egg mark. He has a fancy trade for all the eggs he can supply at prices away above the regular market quotations.

This farm is situated in a very picturesque valley about two and a half miles from the Hudson river and the drive from Croton-on-Hudson is one that will be enjoyed by any one who has an eye for the beautiful in nature.

PRACTICAL TRAP NEST.

Manufactured by Whitty & Co., Croton-on-Hudson, N. Y.

laid by each hen on his place he perfected what is known as the Practical Trap Nest, an illustration of which is given in this issue.

Mr. Whitty makes a specialty of breeding Salmon Favorelles and produced many of the prize winners at the eastern shows last winter. He also breeds White Wyandottes and has a large number of very promising youngsters of both varieties for the coming season.

Every one will receive a hearty welcome at Wiseacres and as Mr. Whitty is a thorough chicken crank they can talk "chicken" to their hearts' content.

Jas. W. Bell.

THE GREEN BONE INSTINCT.

Scene on Wiseacres Poultry Farm, Croton-on-Hudson, N. Y.

Wiseacre's Poultry Farm is well equipped to raise a large number of fowls, having one laying house 120 feet long and one 90 feet long, a large brooder house and numerous smaller houses, brood coops, etc.

Mr. Whitty breeds the White Wyandottes for utility purposes more than for fancy and has some hens of this variety that go considerably over the

warranted to fairly push a procession of fertile eggs into their nests, but when they wanted a meal they surely had to work for it. It was all around them in swarming millions, and crawling thousands, for insects and worms filled the sunlit air and wriggled in every dank and steaming yard of earth.

It was fly, jump, bounce and scratch all the working hours, for the grand-

fathers and grandmothers of the domestic fowl of today were not particular about their meals being served in courses and did not insist on regular feeding hours.

It was literally grub they were after, as well as insect, and they went after them with a ginger and determination that has been passed down through the rushing years, so that today the tiny chick, hot from the egg, will begin to pick at a fly or scratch around him almost before he knows he is born.

There is a deeper tone, more of "here is the real thing" sound to Papa Rooster's food call, when he finds a fat grasshopper, a wounded bee, or a luscious grub and bids his favorite wife to the feast.

He doesn't kick it all over the place as he does the grain that is carefully brought to him, and that it costs a cent or a dollar a bushel stirs him not—and his lady loves eye it with an indifference that doesn't bespeak much egg enthusiasm on their part—they are not particularly anxious to raise a family from seed corn or household scraps, unless, ho-ho! amidst said scraps there be some bits of meat, or, happier find, a choice bit of bone with its tempting shred of flesh and fat.

Now, no haughty indifference, no listless pecking, no back kicks that show indifference if not contempt for the provender offered.

The instincts of hoards of animal food-loving ancestors spring to the front, the lust for food that will make for their best comfort and for the productions of fine muscled, lusty, vigorous chicks, sweeps over them, and they demonstrate the familiar axiom that evidences top-notch energy and hair-trigger speed—"Like a chicken for a grasshopper."

When a man wants anything as much as a Leghorn wants a grasshopper, and does as the chicken does, something is doing right away, and that grasshopper has got to get his high-speed clutch into action if he cares to see another sunset.

Nature has never had to hurry, so she has had all the time she wanted to experiment, and in the chicken line her reasoning ran something like this:

"I want to make a bird machine that will answer the following specifications:

"It must first of all be a beautiful

bird to look at, for I am not going to spoil my color scheme with anything that I can just as easily fit into it as not;

"So I will cover it with a coat light, warm or cool as the warm days and cool nights demand, and I will weave and paint into his coat all the colors, all the shimmer that I know of, and I am pretty well posted in that line.

"The flesh of this new bird must be very toothsome and must be able to evolve into savory soups and rich brown roasts, for some day, I will have a creature to feed that will demand that sort of thing—

"Wings, it must have, and especially sturdy legs, for it can be seen that this kind of a production is not going to lead a life 'all beer and skittles,' but has got to do some lively running and jumping to get its food and preserve its existence.

"It may be said in passing, that this fowl will be largely useful in keeping the worm and bug crop at a profitable level, and bye and bye, can be taught to lay about 200 eggs a year, and prove about the most profitable and handy thing to have around that has been turned out in the scheme of creation."

Not to become tiresome with our simile, there was put into the chickens' make-up a chronic longing for animal food; they have to have it; their own body demands it to keep its flesh firm, its feathers bright, its comb richly red, and its egg-making mechanism in good producing order.

The whole reproductive economy, the most vital question of "fertile eggs" and decent per cent hatches, hinges right on this supply, and preach, entreat, explain as we may, we cannot get a large number of poultry men to believe it, or think about it.

They growl at their lack of success, at the poultry business, at the men and women who are really accomplishing much with their fowls, and they won't believe that the corner-stone of poultry success is made of green bones properly prepared and full of the vigorous juices that lie inside of them and in the adherent strips of meat and tendon.

It is not possible to explain that eggs, which the never-tiring hen is being forever urged to increase in number, must be provided for in the food that goes to the waiting flock. Can it not be made plain that fertile

eggs must, can only result from the proper nutriment being furnished to the cock? He most certainly cannot make brick without straw, nor fertilize a good per cent of eggs merely by meditation and prayer.

Not a bit of it! He wants bones, chopped bones—red-blooded bones—bones that go to waste in great quantities in every home and butcher shop.

Every fiber of his jungle-bred soul cries out for animal food, that has in it the juices and chemical elements that stand for red combs, fertile eggs, abundant eggs—and soups, fricassees, roasts and Baltimore fried, of a quality unknown to the bone meal, branfed unfortunate of so many poultry yards.

To be sure chickens will eat most anything, eat for the mere pleasure of doing something; fill their crops with dry bone meal, gravel, chips of glass, anything to satisfy the instinct to keep busy.

Grain, they need as a matter of course, the busy little food furnaces must be kept burning, but when they want to manufacture show pen quality, fertile eggs and good hard dollars, they have simply got to have the material to do it with.

Green bones, and again green bones chopped to a dollar-making, labor-saving size, a thing done in these days of perfect bone choppers with the minimum of labor, fed to them regularly and in sufficient quantity.

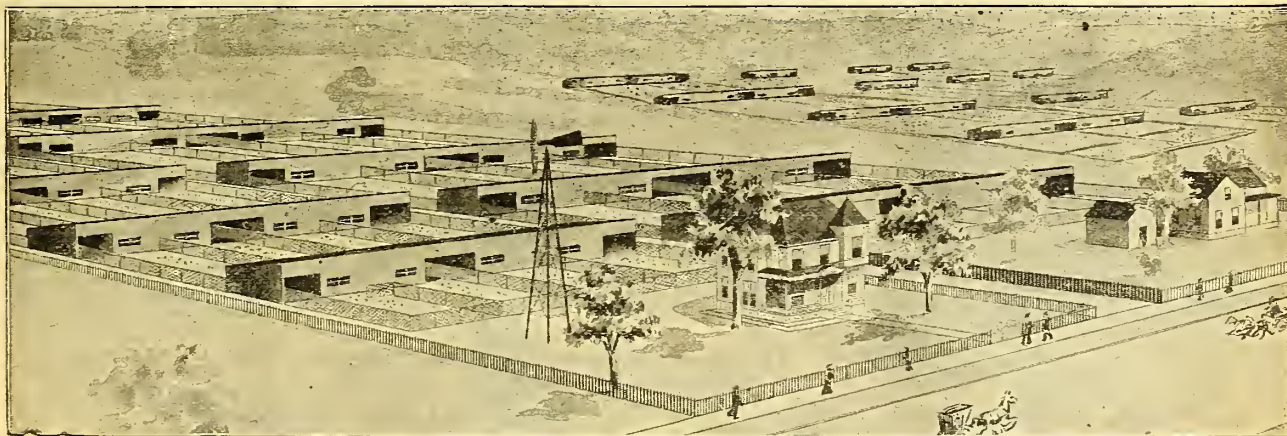

They are not credited with an oversupply of brains, but their little souls do know one thing, and that is, that they want green bones just as often as an intelligent, progressive poultryman will give them the chance to get them.

Sitterly's Golden Golden Wyandottes, Golden Spangled and Penciled Hamburgs. Fine exhibition and breeding stock for sale. Matt W. Baldwin Sioux City, Iowa

Crescent Poultry Farm, Frank Foy, Proprietor, Des Moines, Iowa

"Money In Poultry" is the title of our new 84-page thoroughly revised and illustrated book which tells how to make it; also how to feed, breed and grow and market your poultry for best results. Plans for houses; diseases and cures; how to kill lice and mites. This book probably gives more reliable information about the poultry business, drawn from actual experience, than any book of the kind published. It contains many illustrations; tells all about raising poultry for profit, feeding for eggs, broiler raising, artificial incubation, and contains many valuable and interesting articles. Illustrates and describes the largest pure bred poultry farm in the country. It also describes and illustrates thirty leading varieties of pure bred fowls, and the Frank Foy Incubators and Brooders, and quotes extremely low prices on fowls, eggs, incubators and brooders. Mailed to any address for four cents in stamps. Address

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

ST. JOSEPH, MO.

The management of the Western Poultry Fanciers' Association has secured one of the best halls in the city for its annual show, January 21-26, 1907. It has a floor space of over 15,000 square feet, is well lighted and centrally located. Arrangements have been made for opening the show room on Saturday before show week, so that birds shipped from other shows and arriving in St. Joseph Saturday or Sunday will be placed in position at once and not allowed to remain in the hands of the express companies.

One of the features of the show will be a display by H. F. Limback, of St. Joseph, showing the life of a chick from the "cradle to the table." Two Old Trusty incubators will be hatching show week, and next to them will be indoor brooders with chicks of various ages up to the broiler size. The purpose of this exhibit will be to demonstrate the methods used in rearing chicks artificially.

From letters received from fanciers throughout the four states represented—this being an interstate show—the officers believe they will have the largest and best poultry show west of Chicago this winter.

E. L. McDONALD, Secretary.

The poultry show to be held at Downers Grove, Ill., in January, is to be the biggest thing of the kind ever held in this part of the state. The secretary and the executive committee are anxious that every exhibitor and the public as well shall be fully satisfied and that all the appointments which go to make up

an interesting diversion as well as a successful show shall be complete and the best. The ribbons to be awarded will be an agreeable surprise to the exhibitors—something unique and handsome. The original intention was to have eight silver cup trophies, but the friends of the club are showing their interest and appreciation of the efforts being made, and the premium list now includes ten cups instead of eight, a pair of standard bred geese for the cleanest and neatest display, a box of cigars, a year's subscription to the Downers Grove Reporter, and a list of fifty cash premiums. The silver cups are to be awarded as follows, points to govern: One for the largest entry, one for the best display of each of the following varieties: Plymouth Rocks, Silver Laced Wyandottes, Wyandottes other than Silver Laced, Mediterraneans, any variety other than the above, exclusive of Bantams; Bantams, Pigeons, English Runts, Water Fowl. Cash premiums are afforded for every variety it is expected will be exhibited. An interesting feature of the show will be the booth, over which Mrs. Lemon will preside, assisted by Mrs. Hodges, Mrs. Everett and Miss Gladys Rogers. The secretary, Mr. E. G. Lemon, will be pleased to mail copies of the premium list to all who are interested.

RICHMOND, VA.,

The Virginia Poultry Association will hold its annual exhibition at Richmond, Va., January 22-26, 1907. This show will come at a time when fowls are at their best and just before the mating

season, and will no doubt bring out a large entry. Many handsome special prizes and specialty club ribbons are being offered by the various clubs, and premiums won at Richmond carry a great deal of weight in advertising.

Premium list showing full classification has been issued and can be obtained by writing the secretary, F. S. Bullington, Box 328, Richmond, Va.

WICHITA, KAN.

The Kansas State Poultry Show meets at Wichita, January 7 to 12, 1907. Secretary, Thomas Owen, Station B, Topeka, Kan.; assistant secretary, Clark E. Brown, Wichita, Kan., care Chamber of Commerce.

CANTON, ILL.

The annual show of the Fulton County Poultry Association will be held January 14-19, 1907. O. L. McCord, judge; Leigh Harris, secretary. Send for premium list.

WASHINGTON C. H., OHIO.

The Southern Ohio Poultry and Pet Stock Association will hold its annual show January 8-12, 1907. J. A. Bush, secretary.

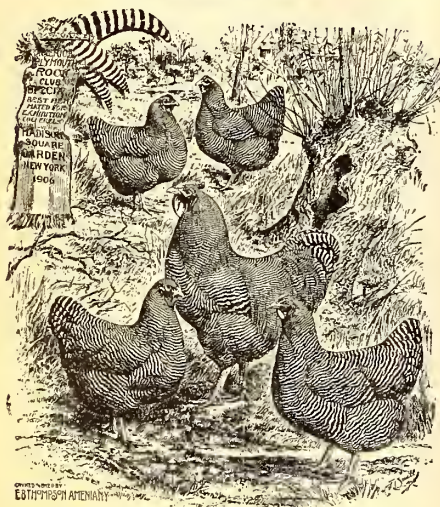

UTICA, N. Y.

The Central New York Poultry and Pet Stock Association will hold its annual show January 14-19, 1907. A. Jay Forbes, secretary.

NEWARK (OHIO) POULTRY SHOW.

The Newark (Ohio) Fanciers' Association is making great preparation for its fourth annual show, to be held January 29 to February 2, 1907. One thousand birds are looked for and a hot time is anticipated. The association has offered fifteen trophy cups and other numerous and valuable specials and 130 ribbons.

"Ringlets" are the Imperial Birds

Winners of Special Prize for Best Pen Mated to Produce Exhibition Cockerels, at N. Y., 1906

The three most superb Barred Plymouth Rock Exhibition Pens on either hemisphere were exhibited by E. B. Thompson at the recent New York Show, Madison Square Garden, Jan., 1906; winning 1st, 2d and 3 special prizes on pens. The Harding Challenge Silver Cup for Best Pen, and the American Ply. Rock Club's grandest special prize for best pen mated to produce Exhibition Cockerels.

MY FIRST PRIZE SILVER CUP PEN WAS STAMPED WITH THE SEAL OF "RINGLET" PERFECTION

These three "Ringlet" exhibition pens were the most striking feature of the most wonderful array of Barred Rocks the annals of time record. They represent the cream of my long and rich experience. The sun never before shone on Madison Square Garden when the great building held three such matchless exhibition pens; they were the triumph of the Fanciers' Art.

My "Ringlet" cockerel at New York winning the American Plymouth Rock Club's special prize for best shaped male is a perfect "Apollo," the ideal Barred Rock Male of the New Standard of Perfection.

THE "RINGLET" BREEDING PEN WINNING the Club's Great Special offered for the best pen mated to produce exhibition cockerels, was declared to be the very acme of skill in mating, a revelation in the science of Barred Rock cockerel breeding. My matings made up of these great winners and their blood have produced this year the great winners for the coming winter's leading shows.

The enormous prestige of the "Ringlets" created by superlative quality has made them the standard by which all other Barred Rocks are judged

Richly illustrated 48-page catalogue upon request; it is full of illustrations of New York winners from life. Elegant exhibition and breeding birds for sale in any numbers. See my ad on back cover page.

Address **E. B. Thompson, Lock Box 510, Amenia New York**

The entry fee is 15 cents per bird and 50 cents for pens. Entries close January 26 at 6 p. m. Ben Myers, judge. Send for premium list. Ed Larason, secretary.

BLACK ORPINGTON SPECIALS AT CHICAGO.

The National Single Comb Black Orpington Club offers a valuable silver cup and five handsome special club ribbons at the coming Chicago show. Full particulars will be furnished by the secretary, Joe Coleman, Bellville, Ohio.

AMERICAN PLYMOUTH ROCK STATE CUP.

The American Plymouth Rock, Illinois State Cup, given for best Barred Rock cock, hen, cockerel, pullet and pen will be competed for at the Illinois State Show to be held at Macomb, Ill., January 7-12, 1907. None but club members from Illinois can compete for it. D. F. Palmer, state vice president; Dr. O. P. Bennett, state secretary.

NATIONAL S. C. BUFF ORPINGTON CLUB.

The National S. C. Buff Orpington Club will hold its annual meeting in connection with the Chicago show, January 23-30, 1907. Over \$100 in cash, besides five handsome silver cups, badges, etc., will be offered. Only club members will be entitled to compete for these prizes. Large illustrated 72-page club catalogue free. Address Will H. Schadt, secretary, Goshen, Ind., for full particulars.

NOTICE TO SINGLE-COMB R. I. RED BREEDERS.

The National Single Comb Rhode Island Red Club requested that I correspond with all the breeders of Reds in this state and try and get them to join the national club, and by that means we could form a state club and divide up in sections and be better able to push the breed and help each other in numerous ways. If we had a good state organization we could push the breed at the State Fair and the State Show that would make a wonderful difference with the Reds. While visiting the fair this fall, I see where we could do lots of good for the Reds as well as all other breeds. The assistant superintendent of the Poultry Show at Springfield told me himself that he did not raise poultry and never had. A good fellow, but it should be some one that is interested in poultry. I doubt very much if the superintendent is a poultry man—I did not meet him. There is a condition that all poultry men should be interested in. They have a splendid building for poultry, and if poultry breeders would take hold and push it, like the hog, cattle and horse fanciers are doing, it would be a great boon for poultry.

We had a poultry show here last year that was better in quality but less in number, and the quality is what we want. We are going to have a poultry show here the third week in January, and I am going to do all I can to get the Reds in the largest list at the show, and would like to see every one of the Single Comb Red breeders come and bring some Reds, or send them, and I will personally look after them. It is necessary for us to get our birds before

This High Grade Door 2-0 x 6-0, All White Pine, a Really Wonderful Value, Worth Nearly Three Times Our Price **ONLY 80c** **Regular Price, \$2.00**

If you have any use for doors, windows, storm or barn sash, moulding, porch brackets, columns, etc., don't buy elsewhere at any price or under any circumstance until you have written for our factory prices.

You will then receive by mail, post-paid, FREE, Our New Millwork Catalog, a book of the latest and best styles of doors, windows, storm sash, moulding, porch brackets, columns, stair rails, ladders, art glass, etc.

We will explain why we can sell at prices so much lower than were ever before known.

Our prices are next to nothing compared with what you have been in the habit of paying.

Let Me Quote You a Price on a CHATHAM Before You Buy an Incubator

It will take one penny for a postal, and a minute of your

time, to write for Special Prices on 1907 Chatham Incubators and Brooders. No matter what kind of a machine you have in mind—no matter where you intended buying, or when—TODAY you should send me a postal and get my catalog and prices.

My book will tell you how good Incubators are made—will tell you what you ought to know about poultry business—will tell you about brooders—will post you on the best way to make money out of poultry—and my prices on Chatham Incubators and Brooders will show you how to start in the poultry business for a small amount of money.

Chatham Incubators Sold on 84 Days FREE Trial

freight prepaid—guaranteed 5 years. That's the story of the celebrated Chatham Incubator. We sell them on trial, pay the freight, and guarantee them for 5 years. With proper care, they last a lifetime. I am going after the incubator business of the country this season, and I intend to get it on great, big value in the machine and a very low price. Chatham Incubators are the best possible to make. They are tested, and known to produce the largest percentage of strong, healthy chickens. We have two immense factories—one in Canada and one in the United States—and run our own experimental station where a battery of Chatham machines are in operation every day in the year, under the care of expert poultry men.

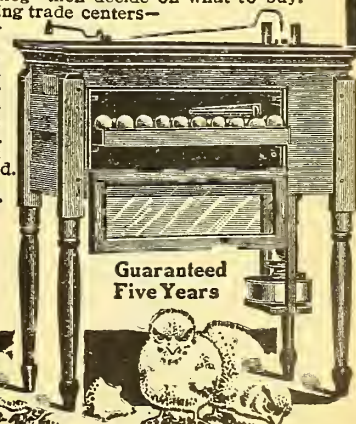

If you are most ready to buy a machine now, put it off for a day or two, until you can get my prices and catalog—then decide on what to buy.

We have warehouses in all the leading trade centers—

where Chatham Incubators and Brooders are kept in stock—insuring prompt delivery. Depend on this:—With the immense amount of money—\$500,000—that we have invested in the incubator manufacturing business, we are sure to give our customers every improvement worth having in the Chatham Incubator. We can afford it, because that is what brings us the largest business in the world. That is all I can say in an advertisement. I invite you to write for my prices and book. Address me personally.

MICA-CRYSTAL THE BEST GRIT ON THE MARKET

Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish, as is the case with grit made from white quartz or marble, and unlike limestone grit, or grit of like soluble substances, is not dissolved by the fluids in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit which does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to fowl what teeth are to other members of animal creation. Let us prove the truth of what we say by filling a sample order for you. Manufactured only by

MICA-CRYSTAL COMPANY : : CONCORD, N. H.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers grow $1\frac{1}{4}$ to $1\frac{1}{2}$ lbs. in seven weeks on it. No science required to feed my system. Failure impossible. Start right. Circular and testimonials free. Write today and stop that big feed bill.

EDGAR BRIGGS : Box A, New Rochelle, N. Y.

The most up-to-date Poultry Supplies. We boast of our labor saving devices. We make these articles to fit the wants of the most judicious poultryman. Send card for circulars. John H. Whaler Company, 1930 East Ninth Street, Canton, Ohio.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 350 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

the public, and the shows are a good place.

There is a great future for the Reds, and all that is needed is for us to get together and push them. "In union there is strength." I would like to meet all the Single Comb breeders that it is possible to at the State Show the second week in January at Macomb, Ill.

I would like to hear from every one that is interested in Reds. If you can offer any suggestions I would be glad to hear them. There are several specialty clubs that are doing good work, and there is no reason why we cannot. Hoping to hear from you, I remain, Yours for the Reds,

F. A. BENNETT,
State Vice President for Illinois.

BUFF LEGHORN CLUB MEETING.

The annual meeting and election of officers of the above club will be held in Light Guard Armory, Detroit, Mich., Saturday afternoon, January 5, 1907, at 2 o'clock. Every member that can is requested to be present.

The club is offering silver cups and ribbons at the leading shows this winter, and the interest in the Buff Leghorn was never greater. They have issued a new catalogue which will be sent free to any one asking for the same. Thomas Peer, president, Fairfield, N. J.; George S. Barnes, secretary, Battle Creek, Mich.

AMERICAN WHITE PLYMOUTH ROCK CLUB.

The American White Plymouth Rock Club desires the name of every party interested in White Plymouth Rocks to place it on the mailing list for the club year book now in preparation. If you send in your name at once, accompanied by the membership fee of \$1, you will be in line to compete for the valuable club specials at the poultry shows the country over for the balance of the season, and also your name will appear in the list of members in the year book. At any rate, send in your name—we shall be pleased to convince you that it is to your interest to become a member of this club. Address your inquiries to the secretary-treasurer, Seth W. Gregory, Delavan, Wis.

NEW YORK STATE DEPARTMENT OF AGRICULTURE.

Special Poultry Institute in Connection With the Meeting of the American Poultry Association at Auburn, N. Y., January 8-9, 1907.

F. E. Dawley, Fayetteville, N. Y., Director of Institutes.

T. E. Orr, Beaver, Pa., Secretary American Poultry Association.

J. H. Scott, Auburn, N. Y., Local Correspondent.

PROGRAM.

Tuesday—10 a. m.

Address of welcome by the mayor of Auburn.

Response to address of welcome by Grant M. Curtis, Buffalo, N. Y.

"Practical Poultry Management," by G. M. Gowell, Orone, Me., professor of poultry husbandry, University of Maine.

Tuesday—2 p. m.

"Poultry at the Farmers' Institutes," by T. E. Orr, Beaver, Pa., secretary American Poultry Association.

"What New York State Is Doing for

Poultry Culture," by T. F. McGrew, Washington, D. C.

Tuesday—7:30 p. m.

"Results of Recent Investigations in Poultry Husbandry in the United States," by C. K. Graham, Storrs, Conn., assistant professor poultry culture, Connecticut Agricultural College.

"Education and Experimentation in Poultry Husbandry in the United States" (illustrated with lantern slides), by James E. Rice, professor of poultry husbandry, Cornell University.

Wednesday—10 a. m.

School of Judging. (Judges in attendance at the meeting of the American Poultry Association will appear before the institute and with the birds which have been judged will explain their methods.)

Wednesday—11 a. m.

Question Box and "Experience" meeting.

Wednesday—2 p. m.

"The Ups and Downs of the Poultry Show," by Fred L. Kimmey, Chicago, Ill., secretary National Fanciers' and Breeders' Association.

"The Judge and the Poultry Show," by Theodore Hewes, Indianapolis, Ind.

A SILVER CUP SHOW.

On October 4 the Lenawee County Poultry, Pigeon and Pet Stock Association, by nearly an unanimous vote, disbanded. One hour later "The Fence Town Fanciers' Club" was organized at Adrian, Mich. Committees were then appointed and in a very short time had a hall secured and four judges hired for a show in January, on the same dates as

the old society, January 21-26, 1907.

The club has pushed ahead in all possible directions and secured financial aid, together with merchandise enough to make the premium list one of the best ever sent out.

Cash premiums are offered on poultry, pigeons, dogs, cats, etc., and hundreds of special premiums, including twelve silver cups, incubator, brooder, silverware, furniture and merchandise of all kinds. The extra fee is small, and with the inducements offered we expect a big show.

Every member of this club is a breeder and lover of good poultry, and every effort is being made to please all.

With four judges the ribbons should be up by Wednesday night, making it possible for you to show and make sales more readily than when only put up the last day.

The premium list will, we expect, be the most attractive sent out by any poultry organization. An artist with the reputation for fine work has designed special covers, and the entire work should please.

Remember the place and date and show with us. The best will win, and a premium won here always carries weight with the buyer.

The premium list is now ready and a postal will bring it to your address.

J. E. HOLYOKE, Secretary,
Adrian, Mich.

IT HURT THE BLACK MINORCA.

Scarcely two years have elapsed since the American Poultry Association, through the influence of a few members

of the S. C. Black Minorca Club, who were far from representative, raised the standard of weight for Black Minorcas. Already it is evident that this change was a great mistake.

The raising of the weights of Minorcas goes beyond the limits within which the best form of this breed may be maintained, and casts aside the best qualities for the overgrown bird. The male is coarse in every section, ungainly, stilty, and clumsy. This has much to do with the infertility of eggs. The female is losing her typical form, is coarse, clumsy and inactive, laying smaller eggs and less of them, and has more of a tendency to become broody. All this has been brought about as the result of efforts to attain the largest size.

Every breeder of the grand bird knows full well that it is the medium sized, active bird that lays big eggs and plenty of them.

A movement to have the Standard weights restored to the original weights—cock 8 pounds, hen 6½ pounds, cockerel, 6½ pounds, pullet, 5½ pounds—is sweeping over the United States and Canada. A petition to the A. P. A., requesting that these weights be restored, and that, other things being equal, the bird nearest Standard weight shall win, is being prepared.

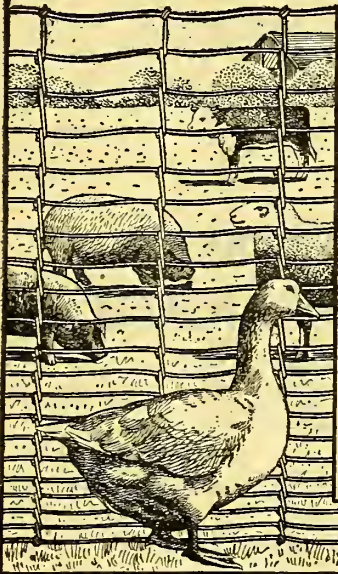

Every breeder in favor of this petition is asked to send his name and address to the undersigned.

GEORGE H. DEXTER,
County Park, Everett, Mass.

The annual meeting of the New York State Orpington Club will be held January 10, 1907, in connection with the

PAGE POULTRY FENCE

Fences Poultry In—Stock Out.

PAGE Poultry Fence is, of course, lighter than the Standard Page Stock Fences, but it is just as strong as ordinary stock fences and twice as strong as any other poultry fence.

Read what Mr. H. P. Rankin, of Hartington, Neb., has to say about it. He says—"I consider Page Poultry Fence in a class by itself. No other poultry fence compares with it. It makes a good stock as well as a poultry fence. A blind mare ran into my fence, and it threw her back as though she were a ball, without damaging the fence."

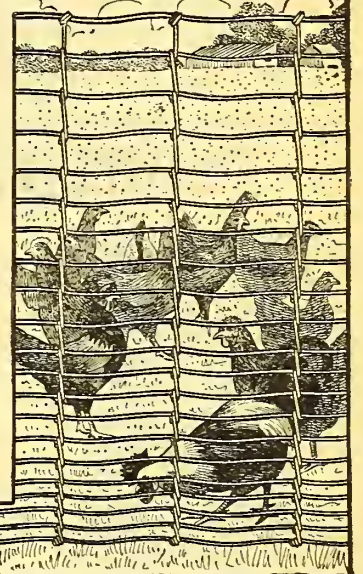

You see, Page Poultry Fence is woven of larger, stronger, high-carbon spring-steel wire, which has great tensile strength. Its power of resistance is greater than any other poultry fence on the market, because every horizontal strand is a coiled spring and acts accordingly when any strain is put upon it. This spring keeps Page Poultry Fence rigid and tight at top and bottom, making the use of base or top boards unnecessary.

Page Poultry Fence adapts itself to all surface conditions and never sags. It's the easiest and most economical fence to put up—requires few posts—few staples—no boards—lasts longer and looks better than any other.

The Page Stay Wire is one continuous piece of wire staunchly secured at top and bottom and wrapped three times around every horizontal. The whole fence is heavily galvanized—is compact—strong—elastic—long-lived. It is the most serviceable of all poultry fences.

Let us tell you more in detail. There are many unique features in Page Poultry Fence. It means money to you to get acquainted with them, so write us today for descriptive folder. It will convince you that Page Poultry Fence is the fence for you.

W. F. CHAMBERLAIN, (The Perfect Chick Feed Man.) ST. LOUIS, MO.

Auburn show. All members are urged to be present as important business will come before the meeting. The club offers three elegant silver cups to be competed for by the members, also several other special premiums. All Orpington breeders are urgently requested to join, which they can do by sending one dollar with name and address to Mrs. J. G. Osborne, Secretary-Treasurer, Fabins, N. Y.

The annual meeting of the Long Island Poultry Association was held at Jehrens Hotel, Mineola, N. Y., December 8, 1906. It was well attended.

Thomas H. Bacon, vice president for Nassau county, acted as chairman in the absence of President Scudder. The report of Robert Seaman, secretary-treasurer, was most encouraging to the members present. It reviewed what had been accomplished by the association during the first year of its existence in the way of interesting poultry breeders and inciting them to better efforts, and also showed a balance of \$199.58 in the treasury.

Officers for the ensuing year were elected as follows:

President—Halstead Scudder, Mineola, N. Y.

Vice president for Nassau county—Thomas H. Bacon, Jericho.

Vice president for Queens county—Isaac Keater, Jamaica.

Vice president for Kings county—Edmund R. Collins, Brooklyn.

Vice president for Suffolk county—Frank B. Jackson, Northport.

Secretary - treasurer—Robert Seaman, Jericho, N. Y.

The following, with the above named officers, constitute the executive committee: Kings county, Rowland Story, Charles M. Smith and Sinclair Smith, all of Brooklyn; Queens county, J. H. Welch, Douglaston; H. B. Rowedder, Jamaica; Andrew Stockholm, Hollis; Nassau county, R. E. Hanington, Wantagh; William W. Titus, East Williston; R. H. Jacob, Central Park; Suffolk county, L. P. Clark, Huntington; R. A. Tuttle, Center Meriches; C. E. Arnold, Babylon.

The association is nine months old and very active. At the last fall fair of the Queens-Nassau Counties Agricultural

Society its officers were prominent in the management of the poultry exhibition and, as an inducement to the betterment of this feature of the fair, offered one hundred and fifty premiums in the way of special ribbons. They also had Mr. White, of Yorktown Heights, N. Y., furnished by the Bureau of Farmers' Institutes, address a meeting of poultrymen and others at the poultry building on Friday afternoon of the fair, on incubators, brooders, and housing poultry, his practical talk being very much appreciated.

Charles E. Forrest, Jamaica, in a short address before the association, expressed his appreciation of the work of the association the past year. A special meeting will be called in the early spring to discuss the holding of a poultry show next season.

FEEDING POULTRY FOR PROFIT.

Another winter is upon us. How many of us are ready to face the storms? How many of us have our hens in good warm houses, and how many have them in good laying condition? I for one have; that is the first thing I think of in the fall, when it begins to get cool, is to get to feeding my hens heavy so they will get to laying before it gets very cold, and I find it pays. When you feed, "feed for profit," not just enough to keep your hens alive, and then wonder why they don't lay. One dozen of eggs now is worth as much as three dozen in the summer time. My hen feed costs me from 50 to 75 cents a week, that goes for ship-stuff and poultry food. Of course, I have the grain at hand all the time, such as wheat, oats, millet-seed and corn. I bought fifty Brown Leghorn hens a couple of weeks ago, but they weren't laying and they are not laying yet, though their combs are beginning to look bright and their plumage is beginning to get glossy. My Black Langshans and Plymouth Rocks are making me a dollar a day. People wonder how I get so many eggs in the winter; it is because I take such good care of my hens.

I wouldn't keep a flock of hens through the winter if I couldn't make

something off of them. In speaking of a canvas door to let the air in, in place of canvas I have a poultry-netting door which I think is much better than canvas. Every morning I go out and open the wooden door and shut my netting door, which opens on the outside. That gives my fowls plenty of light and fresh air while they eat their breakfast, scratching in straw.

So let our motto be, when we feed, "feed for profit."

TO THE BOY FANCIERS.

If you can spare it, I would like for you to give me space in your valuable journal for a few words to my boy friends. I say "friends," for, though I do not know many of the boy readers of this journal personally, I have the interests of all of them at heart.

For the past few months I have been working hard to establish a club among the boy poultry breeders. First, let me give you a few pointers about our club. The name of it is the Boys' National Poultry Association. As I know by experience how hard it is for boys to get money sometimes, I will charge no membership fee for the first year or two. I want every boy who reads this to send me his name and address at once, enclosing stamp, and I will gladly enroll him as a member of my club. Replies to my articles are coming in every day, and my club promises to be a great success. Upon receipt of your letter I will mail you a list of members and at the same time enroll you as one.

The purpose of this club, as I have often stated, is to encourage the boy fanciers of our land to bring them closer together, and to answer any question they may ask in regard to the breeding of poultry.

Now, boys, send your name in at once, and if you know of any others who would like to join, get them to write, too. My address is Robert Fields, 33 Caruthers avenue, Nashville, Tenn.

J. N. Young, of Henry, Ill., breeder of Barred Plymouth Rocks, won at Lacon, Ill., Show, December 10-14, 1906, with Meyers, Judge: 1st, 2nd, 3rd, 4th cocks; 2nd, 3rd, 4th hens; 1st, 4th cockerels; 2nd, 3rd, 4th pullets; 1st, 3rd pens.

WORLD'S RECORD

FOR SEVENTEEN YEARS

Bradley Brothers' BARRED PLYMOUTH ROCKS.

"WORLD'S CHAMPION OF 1906," First Prize and Sweepstakes Cockerel at New York Show, 1906, nearly 500 Barred Plymouth Rocks competing.

Forty-five Winning Males at New York Shows have been bred by us the last Seventeen years.

At Madison Square Garden, NEW YORK, the last seventeen years, birds we bred and raised have won more First Prizes by over Twenty-five per cent than any other exhibitor has won on ANY STOCK during that time.

We have Bred and Raised More High Grade Exhibition B. P. Rocks the past seventeen years probably than any other breeder in the world.

The last Eight Years Thirty-nine birds bred by us have sold for \$100.00 or more each, or that price refused.

OUR LEE BELLES ARE NEW YORK WINNERS.

Among the many New York Show Winners of this line worthy of especial mention are First and Second Pullets 1901; First Hen 1901; First, Second and Third Pullets 1902; First Pen Pullets 1900, 1902 and 1904; etc.

Large Illustrated Circular Free, giving New York, Chicago and Kansas City Show Records, also particulars of a \$1,000.00 Chick hatched from our Eggs.

500 Fowls and 1000 Chicks

For Sale, New York Winners and birds bred from winners. Special prices on large lots.

BRADLEY BROTHERS

AMERICAN POULTRY JOURNAL'S REMARKABLE SUBSCRIPTION OFFER

If your subscription has expired renew at once so as not to miss the next issue, or, if you are not now a subscriber, we want you for one and make you the following splendid offers: For 50 cents we give you one year's subscription to AMERICAN POULTRY JOURNAL and a set of four beautiful colored pictures of fowls. Or if you secure four subscribers (including your own), we will make you the cut price of 35 cents each.

A subscription to AMERICAN POULTRY JOURNAL this year will mean more than ever before. This year we shall do something no other poultry paper has ever undertaken. Every recognized variety of poultry, ducks, geese and turkeys raised in the United States will appear in AMERICAN POULTRY JOURNAL in colors, nearly 300 specimens. Think for a moment of having so valuable a collection of pictures; it is worth many dollars to every subscriber. We call your attention to our beautiful colored covers.

Remit by money order or stamps (1c stamps preferred). Send at once in order to get all the colored pictures.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

EXPERIENCE DEPARTMENT.

Mrs. J. C. DeVol, of Kansas, sends the following excellent hints for this department, which she says she has tried with great success ever since moving from the wooded farms of the east: Where kindlers are scarce and corn is plenty, save several bags of cobs every fall. Keep a supply of these in a covered pail and pour over them a little kerosene, enough to thoroughly saturate them, but not enough to make them drip. Two or three of these will kindle even the most stubborn fire, and will burn steadily and brightly, without the slightest danger of an explosion.

Mrs. W. D. Canfield, of Council Bluffs, Iowa, writes: "Your department is full of practical suggestions which have been of help to me. I feel that the least I can do in return is to give you a few of my discoveries. I have found that a little water sprinkled on the top of my loaves of bread, before putting them into the oven gives a delicate crust; that I can keep steel knives shining and bright with less expenditure of time and muscle if I rub them with a raw potato dipped in scouring brick dust, than in any other way; that a quickly prepared and most satisfactory furniture polish is made by mixing a wineglass of sweet oil, one of vinegar and two tablespoonfuls of alcohol. Apply with a soft cloth and rub with flannel."

Mrs. A. R. Desmond, of Medina, Ohio, tells how she makes use of broken glass jars and other glass articles which would otherwise have to go to the refuse heap.

She ties a string, wet in turpentine, around the jar, below the broken, rough edges, and fills the jar with cold water until it just comes up as high as the string, then sets the string on fire. The glass will break off at this point in a clean, smooth break.

Mrs. A. C. Ferris, of Lincoln, Ill., says she has found a satisfactory way to make over shrunken woollens for the younger members of the family. The great problem has always been to have snug fitting wrists and ankles. She crochets a chain stitch into the stitches of the knit underwear at wrists and ankles, using fine wool for the crocheting, and, with this as a start, crochets close fitting bands of the desired depth. One of her friends takes up the crocheted work on knitting needles and knits the bands, thinking they are firmer and less apt to give than the crochet.

Mrs. J. P. Engle, of northern Montana, says: "One of my greatest trials when first moving here was the fact that in winter the windows were constantly covered with frost, shutting out what little light there was on cloudy days. At last I tried rubbing the insides of the panes lightly with glycerin, and have found no more trouble along this line."

The Making of an Omelet.

There is no more delicious breakfast or supper dish than an omelet, and none more simply and quickly made, yet many people have an idea that they are so difficult to make that they never try them. To be at its best, an omelet

should be a light, fluffy mass of bubbles, and must be served the moment it is done. An unfailing rule for a plain omelet is to break the required number of eggs, separating the yolks and whites. Beat the yolks light, add salt to taste, and a tablespoonful of cold water for each egg. Water makes a much more delicate and tender omelet than milk. Last, add the stiffly beaten whites, folding them in, as beating destroys the lightness. Have a hissing hot spider, with a level tablespoonful of melted butter. Pour the omelet in and let it cook slowly. When it is cooked through, set it on the top shelf of the hot oven for a moment, to brown the top slightly, fold it over, and serve it on a hot platter. The plates should also be heated. Nothing chills more quickly than an omelet, and with the chill it falls and becomes a flabby, tasteless mass.

Using this recipe as a foundation, any number of variations can be made. A few tablespoonfuls of chopped meat can be added just before folding it over, or left-over peas, warmed and stirred into the omelet before cooking, are delicious. A plain omelet takes on a company air if garnished with parsley and a tablespoonful of chopped parsley added before cooking. An oyster omelet is one of our favorite dishes. We take the cooked oysters left from soup, chop them into slightly smaller bits, and add them to the uncooked omelet, pouring around it, when ready to serve, the remaining soup, thickened to the consistency of a white sauce. Tomato sauce is also good poured around a plain omelet. In fact, when you once begin to make omelets, the remnants you find in your cupboard will give you inspiration for any number of combinations.

MRS. J. D. BURTON.

Medina, Ohio.

SIMPLIFIED HOUSEKEEPING.

Following along the line of thought of a simplified Christmas, given in last month's American Poultry Journal, comes the question as to whether we cannot make our daily household duties lighter. The trend of modern house-

(Continued on Page 78)

EAST ST. LOUIS EXHIBIT, DEC. 18-23, 1906.

This is the first attempt by the poultry fanciers of East St. Louis to hold a show. It was a success in the broadest sense, and the managers deserve much praise in bringing together an exhibit of 550 head of high-class birds, every bird cooped singly in a regulation muslin, open-front-and-top coop. This, with a well-lighted room on the main street, drew a good attendance from the public. It also made it easy for the outside-of-city breeders to find, and they were there in goodly numbers. The largest exhibit was the White Wyandotte class, with 138 head, with but very few ordinary or inferior specimens among them. The first and second prize cocks were specimens good in size, shape and white; first cock scoring 94. He also headed the first prize pen. The first prize hen was an ideal specimen for shape and quality; good comb, eyes and white plumage; second and third but very little different from first. First cockerel was a pure white bird, with fine head points, deep, broad body. Second cockerel was a specimen of grand appearance and fine proportions, with perfect tail, body and legs; head not quite so broad as first and comb more faulty. Third cockerel a good all-around specimen, not so stylish as the others. First pullet was of a correct Wyandotte type in size, shape and plumage; good comb, eye and head. The second was a larger bird, and was equally good, but lost place on weight. Both scored 95¼. Third prize was a

half point lower in score. In fact, these and others that got no place look exceptionally good to me. Judge Hallock did well in his work with this class.

The next largest class was Black Langshans, 47 head; among them a few very choice specimens, first and second cocks, first, second and third hens, first, second and third pullets. All were of superior quality throughout. Cockerels all lacked much in filling toward ideal shape. The Buff Plymouth Rocks were represented by 38 head, with winners all of good quality, but most lacking in size. The White Plymouth Rock class had 47 specimens, with few being shown in good condition of plumage. A white bird should be shown clean, so that quality may be seen from the outside as well as in handling. There were a number of very good specimens among them. The Silver Laced Wyandottes loomed up with a number of very superior specimens; good shape and open clear lacing. There were 25 head and attracted much attention and comment. This variety is hard to produce right, but certainly has many admirers when brought in right.

Buff Wyandottes were a very fine class as a whole; cocks and cockerels of good average Wyandotte style and shape, and very good in color throughout. Hens were a fair class and pullets exceptionally good, especially in shape and color. The Partridge Wyandotte was a class that, as usual, stood conspicuously alone in their rich red and black of the males, and the hens and pullets in their attractive dress of glossy brown penciled

plumage. This beauty breed still has faults to overcome in eye and leg color, but this, by care-taking breeders, can be overcome by selection for improvement in these points. These varieties, in order named, made the greater part of the exhibit. In addition, there was a fine display of 30 Pet Games, also some very choice Pekin Ducks. There is no doubt but what the East St. Louis Fanciers' Association will next year carry through a show second to none in the west. All are as clever a set of men and fanciers as anyone need wish to meet, and the three days spent among them will be remembered with pleasure.

MISSOURI STATE POULTRY ASSOCIATION.

The following officers were elected: Geo. T. Tippin, Nichols, Mo., president; C. A. Morton, St. Louis, Mo., vice president; J. A. Heether, Huntsville, Mo., treasurer; T. E. Quisenberry, Slater, Mo., secretary.

Committee—Wm. Turner, Mexico; R. B. Bridgeman, Oregon; W. C. Knorpp, Pleasant Hill; J. A. Maxwell, Fayette; C. A. Robinson, Kirksville. Judges for 1907—Chas. H. Rhodes, W. S. Russell, C. A. Emery.

M. M. Smith, Farmersville, Ill., the Barred Rock specialist, has some fine specimens of this grand old variety that he wishes to go into the hands of someone who will appreciate good stock. Mr. Smith's stock is farm raised, and is very healthy and vigorous. Better write him if you want a nice male to head that breeding pen. Don't forget to mention American Poultry Journal.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. NONE BETTER ANYWHERE AT ANY PRICE. STOCK FOR SALE, BOTH OLD AND YOUNG. Illustrated circular free.

BARRED ROCK HEADQUARTERS

Perhaps It's a Crazy Notion

But this season we are going to give our customers and competitors a chance to catch up. The big Chicago Shows, the past twelve years our birds have won more 1st prizes, more clean sweeps, more unparalleled records than all our competitors combined. Exhibition birds fit to show in any company. If you need one or fifty let us prove to you where there is a few creamy ones raised. 1000 breeding birds bred in the purple. They must be sold in the next 90 days. We can make you attractive prices on attractive birds. Write and state exactly what you want. 31-page catalogue for a stamp, telling all about 17 acres of Barred Plymouth Rocks.

R. E. HAEGER & CO. R. E. HAEGER, Pres. Algonquin, Ill.
B. E. ROGERS, Sec.

The breeders of runners are earnest in their belief that their favorites are the best and when their merits are known will be the most popular of the duck family. They are putting forth their best efforts to have a representative exhibit at the coming Chicago Show. The following circular letter is being sent out to fellow breeders by one of the most enthusiastic of the fraternity:

"Chicago, Dec. 14, 1906.

"Dear Sir—I believe you are interested in Indian Runner Ducks and would be pleased to have them well represented at the next Chicago Show, to be held Jan. 23 to 30, 1907.

"This is an opportunity and the time, I believe, to give the Indian Runners a big boost. An exceptionally large exhibit at this, the largest show in the West, will attract much attention and receive considerable favorable comment in all the poultry papers.

"Indian Runners are, as you are no doubt aware, one of if not the leading breed of ducks in England, a position gained not only as a useful but a fancier's fowl, and anything done to increase their popularity here in

America will naturally result in an increased demand for stock and eggs, and therefore benefit every breeder.

"I shall make a full entry and by encouraging competition may lessen my chances, but I am especially anxious to see the Runners come to the front this year, and desire to have you aid in making this a wonderful exhibit.

"The management has promised and no doubt will assign a competent judge to place the awards, and a winning at this show will be worth while. The expense will not be great, and even though one does not win, I am quite sure the amount will be returned either directly or indirectly many fold.

"We have assured Mr. Kimmey, the secretary of the show, that the Runners will make a very creditable showing, and if half the breeders and advertisers who should would send a single specimen each it will insure an exhibit that will astonish the natives.

"Please do not depend on there being enough without you, but help us make the Indian Runner chief of the tribe.

"A premium list and entry blanks will be forwarded you in due time. It is the intention to send to all, but if from any mistake anyone should be

overlooked, write the secretary at 325 Dearborn street, Chicago, Ill.

"J. C. KNAPP.

"P. S.—It has been suggested that a meeting be called to be held during this show for the purpose of forming an Indian Runner Duck club. What do you think about it?"

A VALUABLE BOOK FOR FARMERS AND POULTRYMEN FREE.

A 48-page book called "Practical Farm Buildings" has just been published by F. W. Bird & Son, East Walpole, Mass., and Chicago. It is full of valuable plans and specifications for all kinds of farm and poultry buildings and every one of our readers should take advantage of the exceptional offer they are making to send it free to anyone who sends in 4 cents in stamps to pay for postage. The book would ordinarily sell for \$1 and it is worth every cent of it.

The first few pages describe the best location, shape, etc., for poultry buildings, and a dozen or more pages are given up to plans and specifications of the latest and most practical types of poultry and colony houses. Twenty pages are given up to dairy farms, stables, hog houses, sheep sheds and other buildings on the farm.

It is one of the most valuable pieces of advertising matter ever put out and only a half dozen pages in the rear of the book are reserved for the story about Paroid and Neponset Roofings. On these pages may be found cuts of the Plant Industry Building at Washington, colony and chicken houses on the farm of Prof. C. M. Cowell, of the Maine Experiment Station at Orono, Me.; the largest stock farm in Minnesota, buildings on the largest duck farm in the world, bird's-eye view of W. Barry Owens' plant at Vineyard Haven, Mass., sheds of B. J. Lambert, Apponaug, R. I., and many other buildings owned by leading poultrymen.

Our readers should send for this book at once, because the edition is limited and it will also pay you to get samples of Paroid and Neponset if you do not know about the kind of work they will do.

What a Noted Poultryman Says:

"I would rather have a POOR bird well fed than a GOOD bird poorly fed, but take a good bird and feed it PURINA FEED and you're bound to build a winner every time."

Now, there's a reason for this. And the reason is that only the BEST grain and other ingredients go into PURINA POULTRY FEEDS, which are balanced scientifically for the building of frame, feathers and eggs.

THE CHECKERBOARD BRAND

Stands for the Best in Poultry Feeds

You will always find PURINA POULTRY FEEDS put up in CHECKERBOARD BAGS so that you can't mistake them, and in the Checkerboard Bag you'll find the best Feeds on the market. They're made by the Purina Mills, by the people who KNOW HOW from experience. Don't take inferior feeds when you can get the best.

A Perfect Feed for Every Purpose: Purina Baby Chick Feed saves the little chicks; Purina Mash makes hens lay; Purina Scratch Feed has the largest variety of the best seeds, properly proportioned; and Purina Alfalfa Meal gives a green feed the year 'round, while Purina Fattening Feed puts on the finishing touches.

Ask your dealer for THE CHECKERBOARD BAG and insist on having it. Take no substitute. Don't let anybody make you think something else is just as good. If your dealer doesn't handle our feeds, then send us his name and we will send you samples and a copy of the "Standard Poultry Feeder."

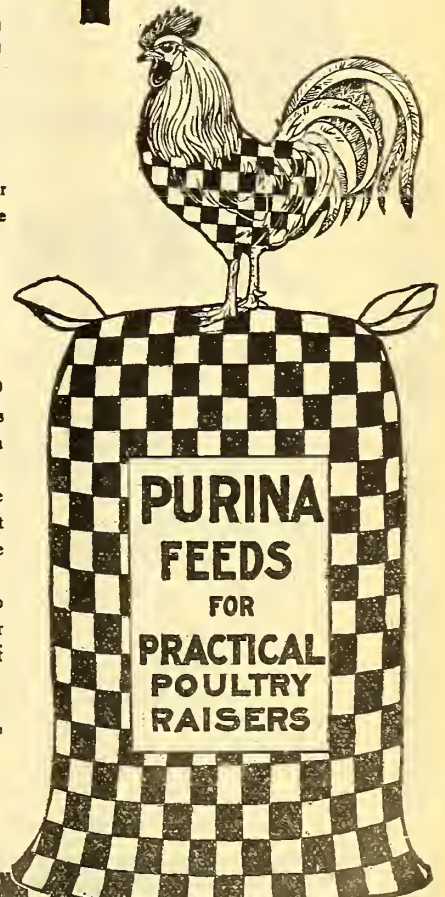

No Grit, No Burnt Wheat or Trash in Purina Poultry Foods.

Questions and Answers

- Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: As I am a reader of your paper I would like to ask some questions. I have a yard 60x116, a house 10x20, 7 feet high in front, 5 in back, covered with felt roofing; have three windows in front side, 2x2 feet 3 inches; have no glass in, but frames hung on the outside so they will fit close to the walls and covered with muslin. I have not been keeping them closed yet. I keep about 75 hens and 25 or 30 pullets in this house and yard. Have been feeding bran and chop corn mash in morning and wheat and corn at night for a long time. Feed wheat entirely at night. Then I bought some feed at Kansas City which was recommended very high, and fed that awhile as a mash as directed, then I copied after a neighbor poultryman by feeding it dry and mixing with bran, about one-half, and beef meal, about 5 per cent. They eat it readily and I give them cracked corn besides, with fresh water every day and green grass in the yard, still they don't lay to do any good. They are a mixture of Barred Plymouth Rocks and White Leghorns, etc., but they have always laid well. I am just commencing in the business and would like to know what is the matter. I have a pen of White Wyan-

dottes that I have fed nearly everything to, but still they don't lay. Of course they are all going through the moult, but others I hear of that feed about the same are getting quite a number of eggs. Last summer I had a great many chicks that seemed to grow no feathers, although they seemed bright and spry, but were almost entirely bare; some would grow nothing but the tail and wing feathers. They would seem droopy and stupid and finally die; some would get a dark purple under the skin, especially around the head, and would die in a few days. What is the best feed for growing cockerels that you want for market? Can they be caponized with safety in winter? When is the best time to market surplus cockerels? Mine were late-hatched, some as late as the last of July. Will it pay to feed them through the winter, or sell now? How much fresh meat per hen should be fed? How is the proper way to feed mash? Is there a successful feed box for feeding it in bad weather? So much is lost feeding on the ground.

Kenmundy, Ill.

O. T. V.

Answer.—Your failing of eggs is probably due to the want of fresh cut bones or bone meal; your house and yard of that size seem to be thorough-

ly suitable for all purposes, but glass should be inserted in the window sashes during the winter; that is, if there is other ventilation in the house. It looks to us as you were feeding too much corn and that hence your fowls are too fat to lay well, which is shown to us by your pen of White Wyandottes being in a similar state.

Your chickens that were not feathering was owing to being invested with lice, which is proved to us by their having some tail feathers.

Cockerels for market should be cooped up for three weeks and fed upon fattening food of all kinds.

The season of the year has absolutely nothing to do with caponizing, any time of the year will do, but the age of the birds must be taken into consideration, and not be done after a certain passage of age.

It will be more profitable for you to sell all surplus cockerels now, as keeping them through the winter costs too much and they realize but little more in spring, not being spring chickens. A tablespoonful of meat is quite sufficient for a fowl three times a week; there are no mash feeding boxes in the market, the best way to feed soft food is to place it on a board plank, and take the board away when feeding is done. Never on the ground—too much waste.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next month's American Poultry Journal: (1) I have a Minorca cock which seems to have something in his throat and coughs

Keeps your yards filled with 200-egg hens—no middlings, no drones.

Egg Getting an Exact Science

you have but to apply the rules of the Walter Hogan System which teaches you—

How to select the laying hens.

How to select pullets that will make laying hens.

How to choose roosters that will breed layers. How to mate to breed first class layers.

The System is well established, not just a theory. Hundreds of poultrymen are proceeding under it. It brings them success. If you will write for our little book on the Hogan System it will

Open Your Eyes to Possibilities

with poultry. There are only plain, easy rules to follow. Anybody can apply them when he has once been taught how. Doubles your eggs, saves half the expense—all the expense of keeping medium and poor layers. Nothing to pay till you know—"No Not One" Cent until you have tested it and know yourself that all we claim and more is true. A copy of the book free. Write for it to-day.

The Walter Hogan Company, 17 Nat'l Bank Bldg., Fergus Falls, Minnesota.

and mopes around. I had a hen similarly affected which was in another yard. Has he a disease? (2) I have several young chicks, and all have sores about the head—look like warts. Please state cure. (3) Is scaly legs a fatal disease? (4) Do mites mature in winter time? G. E. L.

Northfield, Miss.

Answer.—(1) The cock you mention has evidently a touch of roup. It is very catching from one fowl to another. (2) Your case of warts about the head of your young chicks is probably the chicken pox, very prevalent this year. Caustic is the only remedy for it. (3) Scaly legs is not fatal, but should be cured as early as possible. See remedy given to another correspondent in this issue. It is very catching. (4) Mites do not mature well in winter. They do not multiply much, except under certain circumstances.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next American Poultry Journal: My chickens seem to all have a cold; most of them are sneezing and some are wheezing. It seems to be spreading all through the different flocks. Their coops are dry, tight on the back and roofs and ends but quite cracked on the south. They have range and are fed oats and corn, also some mash. I have kept their coops clean. Have used whitewash some early in the morning on nice days, so they would be dry by night and have put a few drops of carbolic acid in their drinking fountains. What more can I do to help those affected and keep it from spreading or turning into roup? Clarion, Iowa. Mrs. A. B. H.

Answer.—To prevent colds and succeeded by roup ravaging the poultry, prevent them from draughts, wet and

cold winds and keep the houses as dry as possible. When it is there, remedies are numerous but very difficult to use safely.

To disinfect colony houses after affected stock has been in them to make them perfectly safe for occupation of other stock is to fumigate them thoroughly well twice upon following evenings with burning sulphur (brimstone), after having pasted old newspapers over every joint and crevice; afterward shifting or moving them to fresh ground and quarters. All necessary appliances to be kept in the houses while so doing.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1) How many Rose Comb White Leghorns will a house 10x10 accommodate during the winter months? (2) How to get rid of mites off of fowls and also out of the houses. (3) What is the best food to receive the best production of eggs? (4) A sure way to tell the ganders and geese of Toulouse geese? (5) Is there any cure for bumble foot? If so, what? J. M. Tennessee, Ill.

Answer.—(1) Nine to ten fowls is all that such a house will comfortably accommodate during the winter months. (2) The only way to get rid of mites on fowls and about the house is by free use of kerosene and carbolic acid. (3) The best to use for promotion of the egg supply is meat and ground fresh cut bone alternately. (4) The way to distinguish a gander from a goose is by its more highly pronounced voice, while the goose's is more silvery. A gander will also bend its neck close to the ground and hiss when approached, where the geese will move along, heads upright. If a dog be introduced to a flock the

ganders will stoop heads and necks and hiss him, while the geese will scamper to the skirt of the building. (5) Bumble feet in fowls is totally incurable.

Editor American Poultry Journal.

Dear Sir: I enclosed eight hens the latter part of last July and only gave them less than half rations for two weeks. They stopped laying after eight days and after fourteen days I let them out and fed them with all the corn and oats they could eat and gave linseed in their soft food twice a week, and to my surprise they commenced laying at the end of the fourth week instead of moulting, as I intended they should. Please let me know what was the reason that they didn't moult.

Knoxville, Tenn. P. W. M.

Answer.—It is most probable that your hens after their transformation were housed in a very cool place, hence their resuming their egg-laying character in lieu of going into moult. You also fed them too richly afterward.

Editor American Poultry Journal.

Dear Sir: Last spring I started in to raise full-blooded Single Comb White Leghorns. The pullets laid 15 or 20 eggs apiece this fall, then went to setting. Is that uncommon for the Leghorns? I lost two pullets today; one was sick this morning and died in a few minutes; their combs are black and their droppings are white and thin; their craws were full of yellowish water; they are very fat; free range and free access to oats and corn bin; plenty of sand for grit. What is the cause and cure? H. P. S. Gotebo, Okla.

Answer.—It is somewhat uncommon for Leghorns to come on to sitting, but some strains of Whites have been crossed with White Rocks so as to gain

BENT'S MILK ALBUMEN

(Dry Skim Milk). 43 to 50 per cent Albumenoid Protein. Originator Milk Food for Poultry. GREATEST ANIMAL FOOD KNOWN.

Keeps Poultry Healthy

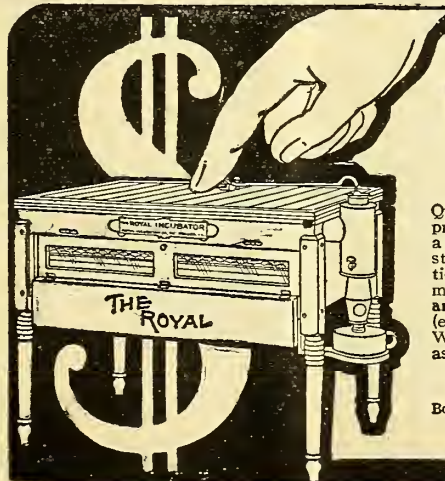

VIGER'S
Crushed
Charcoal

Prevents Disease

A DISEASED CROP is the root of all poultry evils. If your fowls are free from digestive disorders and impurities and gases in the crop, they'll lay, and lay regularly. If the crop is unhealthy, full of disease germs and noxious gases, your hens won't lay. Now what will make this crop healthy and make your hen a perfect-running egg-machine? **Pure Charcoal** will, because it's the greatest absorbent known in nature and thus cleanses the crop and entire system of all impurities. It is a sure preventative of all diseases. Viger's Crushed Charcoal is absolutely chemically pure. It comes in 3 sizes: Coarse granulated, for mature poultry; fine granulated, for small chicks; and pulverized, for soft feeds, mashies, etc. It will mean a fuller egg basket for you. Remember it's "no result, no pay" with us. Price \$1.00 per 50-pound trial bag. Special prices in quantities. Samples free. **Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.**

HERE'S THE GREATEST INCUBATOR BARGAIN.

THIS 230 Egg Royal Incubator \$12.75
FREIGHT PREPAID ANYWHERE
East of the Rocky Mountains.

Quality and price—two things that "talk." You can't get a better incubator than the Royal at any price. It is built right, strong, substantial, will last a lifetime, and is guaranteed to hatch as large a percentage of fertile eggs as any incubator in the world. It is not a "cheap" incubator, but is strictly high-grade in every respect. Easy to operate; automatic control of heat; perfect ventilation. **ONE TRIAL HATCH FREE**, if you want it. Your money back if not satisfactory. Don't pay more for a smaller incubator; don't buy a poorly constructed, go-to-pieces incubator; don't buy any incubator until you have investigated our remarkable offer. Remember, **WE PAY THE FREIGHT**, (east of the Rockies). We guarantee the incubator under a bank bond; we give you a fair trial. We save you about half the cost and guarantee better results than incubators give costing twice as much. It will surely pay you to investigate. Write to-day for special offer:

FREE Handsome Catalogue of incubators, brooders, poultry supplies, poultry foods, eggs for hatching and standard bred poultry from our own farm.

Book on "Proper Care and Feeding of Young Chicks, Ducks and Turkeys," 10c. 60c Standard Poultry Paper 1 year, 10c.

Learn About the Model Farm and Our Co-operative Work

*I can Vastly Increase Your Poultry
Profits if You Will Allow Me
An Opportunity.*

I want to become acquainted with every poultry keeper in the United States, large or small, who raises poultry for profit and desires to obtain the greatest results from his flock.

I know there are thousands of farmers and others who are not realizing one-half what they should receive from their poultry.

It is surprising how some apparently insignificant change in the care of poultry can speedily turn this branch of farming from "a small payer" to the most profitable industry on the whole farm. Sometimes it is a question of marketing, how, when and where to sell your eggs and poultry to the greatest advantage. Again, it may be some small mistake in the feeding or care of growing chicks, or any one of a hundred possible errors apparently small in themselves, but yet great enough to prevent one from making the money which poultry should bring.

I have visited hundreds of poultry farms, large and small, and in about every instance I have been able to make some suggestion that has effected a decided improvement in the business.

I believe I can extend this idea further and increase the profits of every poultry raiser if I can become acquainted with the conditions under which the poultry is raised and marketed. If you, Mr. Farmer, or the member of your family who looks after the poultry, will answer the following questions and mail the same

to me, it will give me the information I need to analyze your individual requirements, and advise you just what changes are required to increase your profits.

The Model Poultry Company is handling eggs, and will shortly be handling poultry as well. It is possible we may be able to buy your product at better prices than you are now getting.

Give full name, Town, County, State. How many layers do you keep? How many are pullets? Are they yarded? Are they of any particular breed? What breed have you a special liking for? Have you any market for your eggs and poultry other than the local town store? What are the highest and lowest prices you are now paid for eggs in the fall, in the winter, in the spring, and in the summer? What prices are you paid for old fowl alive and dressed? How many did you raise last season? Have you accommodations to raise more? If you have not enough hens for a full case of eggs each week, is it possible to club with neighbors so as to make up a full case of strictly fresh eggs from yarded hens for delivery at least once a week? How many layers will you try to grow and keep next year? Do you use incubators and brooders or depend upon the old hens as mothers?

Answer these questions carefully, as I will be best able to form an accurate judgment of what we can do for you by having a full understanding of existing conditions.

CHAS. A. CYPHERS, Pres., Model Poultry Company, 301 Henry St., Buffalo, N. Y.

size, and yours, it looks to us, are of that kind. The hens that died in the way you say, were evidently overfat and troubled with liver disease.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in next issue of the American Poultry Journal: I recently purchased a fine pen of yearling Black Minorca hens and a cock. They seem to be through the moult, as the plumage is perfect, but their combs are pale and shrunken and they are not active, but stand around "all humped up" all day. Please tell me the best way to hustle them along toward bright red combs and lots of eggs. (2) Is there such a fowl as a White Wyandotte bantam, and if so, will you give me the names of some of the breeders of them? J. C. K.

Gloversville, N. Y.

Answer.—Your pen of Minorcas cannot possibly be thoroughly through the moult; but, however, you had better treat them to a little stimulating food, also adding meat and fresh ground bone to their morning mash; this will not only brighten their combs but will also bring them on to lay soon. (2) White Wyandotte bantams have not yet been brought forward; at least should they exist none have been shown at our exhibitions yet.

Editor American Poultry Journal.

Dear Sir: As I am a subscriber to your American Poultry Journal, I would consider it a great kindness on your part if you would answer me the following questions in an early issue of your American Poultry Journal: (1) Do you think I could raise chickens for producing dressed poultry by feeding them oats all the time and nothing else, and if so, how many pounds of oats do you think a bird of the Light Brahma type would consume if fed from a little chick until 6 months old? (2) If I raised Plymouth Rocks, would they eat less than Brahmas? (3) Would the chickens weigh as much at 6 months old? L. A. B.

Spring Bank P. O., Alberta, N. W. T.

Answer.—No, it is impossible to raise chickens for killing upon oats and nothing but oats. Plymouth Rocks would prove more suitable for you to breed for dressed poultry (but not on oats only). They would weigh somewhat less than Brahmas, but they eat less; but their flesh is more of an eating character, and hence more tempting and salable in the markets. Feather-legged fowls are never in such a demand.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1) I keep 360 hens for utility purposes; is there any practical way to keep the body lice off them, if so, please give me remedy? I have used a good brand of lice paint on roosts two times per week for four months, but still my hens have body lice. I have used lice powder for setting hens with success, but I do not think it a practical way for such a large flock of hens, as I would have to be powdering all the time. (2) Will body lice harm the utility purposes of hens? (3) I have a lot of White Plymouth Rock cockerels 7 months old that do not crow; they are in the best of health and weigh

around 7½ pounds. Can you tell me the cause? Yours truly,
St. Louis, Mo. G. F.

Answer.—(1) The only so-called practical way of destroying or preventing body lice on hens is to mix 3 parts of salad or other fine oil to 1 part of crude carbolic acid and put this on the head and under the wings of all your hens, keeping afterward the house scrupulously clean.

(2) Certainly lice will harm the utility purpose hens as well as all other hens, and it is not only sure to diminish the quantity of their eggs laid but will also make them lose flesh rapidly.

(3) The non-crowing of your Rock cockerels depends properly by not having come to a crowing age yet, and if they have yours is decidedly a most valuable strain of birds, long being looked for, and will sell most rapidly and at good prices with such guarantee!

Editor American Poultry Journal.

Dear Sir: Kindly answer the following: (1) I have a yard 65x180; can I make two breeding pens out of it for 12 females and one male, and get good results? (2) I have White Leghorn male, he seems to be sick, but eats well and stands around and sings all the time; his comb has a dark color and drops over to one side. What cause and cure? (3) I have a Brown Leghorn hen; has scaly leg; is she good to breed from? (4) Do you think a cross-breed between White and Brown Leghorns would be best for egg produce? Humble, Tex. T. J. B.

Answer.—(1) Yes, out of a space of that extent you can make a most ex-

cellent breeding pen for the number of fowls mentioned and obtain most great results.

(2) With respect to your Leghorn male, you do not give us enough particulars with the exception of color of his comb for us to be able to find out what he may possibly be suffering from.

(3) Yes, your Brown Leghorn hen, although with scaly legs, is good to breed from; but we would decidedly advise you to cure her of that catching complaint by inserting her legs for three minutes by watch time in a tin containing kerosene, and that will cure it.

(4) No, cross-bred White and Brown Leghorns will not improve their laying capacities; both are individually most excellent layers as pure-bred.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue some way to stop chickens from roosting on the ground. Have put them on the roost about 15 times, but it does no good. They are full-grown pullets, Light Brahmas.

Memphis, Tenn.

E. N. K.

Answer.—The fault with your birds not willingly roosting on the perches is most probably that they are put too high up from the ground for them to do so conveniently and to jump down; being heavy birds like Brahmas, the perches should not be higher from the floor than two feet.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue what is the best seed to sow

for young chicks to run in on sandy ground.

J. L.

Berlin, N. J.

Answer.—The best seeds to sow for young chicks to run on, on any kind of soil, is a mixture of lawn grass seed and dwarf clover. But if the soil is very sandy a top dressing of fine decayed manure will be necessary. Sods will do as well.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue the following questions: (1) Which is the best system of ventilation for a coop? (2) Would it be too cold in winter if I would cut a window 12x16 in the south side and cover it with burlap, and would that be ventilation enough for a pen 12x14? My system of feed is wheat in litter in the morning and evening. I use the dry mash system, which is composed of 3 parts cornmeal, 3 parts bran and 1 part meat and bone meal. This dry mash is before them at all times, also oyster shells and grit and plenty of fresh water. I have always kept chickens, but this is my first year with pure-bred stock. If there is any change that could be made for better results I would be pleased to hear it.

Saginaw, Mich.

A. C. J.

Answer.—Ventilation should always necessarily be put at the top of the house; your suggestion of cutting a window sash covered with burlap would cause too much cold to enter the house. It would do very well in summer time, but not at all for winter. Your feeding of the birds seems to be good, and for pure-bred birds should not be altered; you were successful with it before you

MILLER'S W. P. ROCKS

WIN AGAIN AT THE MISSOURI STATE SHOW

At Mo. State Show, December 11 to 14, 1906, I won four firsts, three seconds, the sweepstake silver cup for best shaped Plymouth Rock cock, the Ivory Soap cup for whitest bird in the show, and six other special prizes.

kept pure-bred stock, so continue now in the same manner.

Editor American Poultry Journal.

Dear Sir: Will you kindly tell me what is the matter with my chickens? They shed their feathers, or at least seem to. They appear healthy, but loose their feathers, then are unable to stand the cold. Their quarters are clean, whitewashed and cleaned regularly.

J. F. D.

Cadams, Neb.

Answer.—The only precaution for you to take with your birds when apparently commencing to moult is to extract two or three feathers out of each wing and tail of each fowl, which operation will at once send them in a most rapid moult. Give them also for a few days afterward a little spiced food mixed in their morning mash. Yours is not an unusual case.

Editor American Poultry Journal.

Dear Sir: Will you kindly let me know in your next number what is the matter with my White Rock cock? He has small black specks on his comb and wattles; on one of the points of comb the specks are all bunched together, making a solid covering, while on his wattles the specks are scattered. I keep him in a dry place cleaned every day, feed him on clean selected food.

New York City.

M. D.

Answer.—The comb and wattles of your male bird got probably frost-bitten and more specks are the result. Apply once or twice on following days a little turpentine and whatever these specks are they will ultimately (if dry) come off.

Editor American Poultry Journal.

Dear Sir: I had a pullet with a sore foot. It started a small hard black lump between two toes and grew till it was as large as a good-size marble and did not lame her till it got to be quite a good size. I then cut it out with my pocketknife. It was very hard and came out in a whole lump. She then kept so bad that I killed her and found that her whole leg to her body had almost perished away till nothing but the skin and bone was left. Please state disease and remedy, if any.

W. W. H.

Answer.—The case with your bird was positively a case of gangrene of the foot, left to become so developed that it had spread all over the body of the bird. Had it been extracted when first noticed this would not have occurred. It is not contagious, except when brought into contact with a sore on another bird's foot.

Editor American Poultry Journal.

Dear Sir: I want to ask a few questions which I would like to see answered in the American Poultry Journal. (1) Can one keep a gobbler from 1906 hatch to use as a breeder with turkey hens, one of which is the dam of the gobbler? (2) What is the cause of one or both testicles in cockerels turning dark? (3) What is a good disinfectant to use after roup or cholera to clean the coops and the poultry runs? (4) Is there any cure for roup, either diphtheretic roup or the kind in which the head swells?

Gays, Ill.

S. A.

Answer.—(1) A gobbler hatched in 1906 should not be mated for breeding purposes and it would be very unwise

VEHICLES AND HARNESS

MAKE LAY HENS

Our automatic self-feeding Poultry Drinking Fountain furnishes fresh pure water for fowls and makes them lay during cold weather when eggs bring a high price. It takes the chill from the hen house. Costs about 5 cents a week for oil. Only non-freezing water fountain made. Shipped on approval. AUTOMATIC HATCHING CO., Detroit, Mich. We also manufacture the best Poultry Brooder ever made.

for you to attempt such mating, especially with his own dam.

(2) You must have a very vague idea of what testicles are, as they cannot be perceived in a living cockerel.

(3) The best disinfectant we can recommend for your purpose is "Sanitas," manufactured in New York City by the "Sanitas" Co.

(4) The cure of roup of any kind is most difficult.

Must say that cholera and roup are of as much a different nature as they possibly can be.

Editor American Poultry Journal.

Dear Sir: Please answer in next num-

ing: We have three pens that are 8 by 12 feet. The runs from these pens are 8 by 55 feet long. The birds have use of all the floor space. I would like to know how many chickens I can winter in these pens.

S. A. McC.

Steubenville, O.

Answer.—Each pen of the size given will winter comfortably a dozen fowls; the runs attached to it, if to each of the pens is of that size, are most ample.

Editor American Poultry Journal.

Dear Sir: Will you answer the following questions in next month's Journal:

First—How can I get rid of mites?

BARRED PLYMOUTH ROCK.

Bred and owned by W. D. Holterman, Fort Wayne, Ind.

ber of your paper: I have a Rhode Island Red cockerel with salmon colored legs. As much as I can see he is a very fine bird. Would you use him for breeding?

C. H.

Racine, Wis.

Answer.—Yes, if he is a fine bird in every respect but leg color, decidedly use him as a breeder as a trial, with goodly colored legged hens or pullets and you will find that most legs of youngsters will be of the desired shade.

Editor American Poultry Journal.

Dear Sir: Please answer in your Question and Answer department the follow-

Second—What foods should I feed during the winter months to get the best results in the way of egg production?

Third—I have 15 Rose Comb Leghorn hens and one rooster, how much food should I feed them each meal during the winter months?

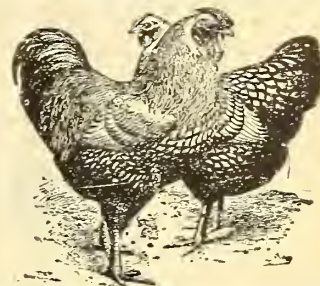

Fourth—Does heavy feeding for eggs during winter hurt the fertility of the eggs?

Fifth—What is the cause of bumblefoot and what is the remedy? J. M. Tennessee Ill.

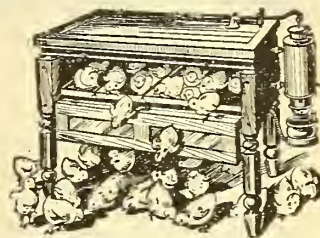

Answer.—First—The only way to get rid of mites in your scrupulously house cleaning circumstances is to apply to

Shoemaker's Poultry Book

AND ALMANAC FOR 1907.

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS showing them in their natural color. POULTRY CUTS

Latest and best. Our new Catalogue shows all varieties. Send for it today. I also breed Barred Plymouth Rocks. Eggs in season. CHAS. L. STILES, 921 Mohawk St., Columbus, O.

every crevice, hook and corner with a brush a mixture of kerosene and carbolic acid in equal proportion, giving all a coating on two successive days.

Second—Warm food every morning, in which is mixed at alternate days a spoonful to each fowl of meat or fresh ground bones, will bring on your fowls to lay in winter. Do not stimulate them.

Third—Any variety of fowl—Rose Combed Leghorns or others—should be fed twice a day with as much food as

they will eat greedily, morning and night, with a handful of small seed given them at midday in their litter to scratch in. Green food must not be forgotten in addition to this daily, if possible.

Fourth—Heavy feeding for egg production, if not of a stimulating nature, will not at all interfere with the fertility of eggs.

Fifth—Bumble foot in fowls, especially of heavy breeds, is generally caused by the fowls perching too high

from the ground and having to jump to a gravelly or ashy bottomed floor. Two-foot high perches are high enough for all fowls.

Editor American Poultry Journal.

Dear Sir: Can you tell me through your journal or otherwise how many Partridge Wyandottes can be kept through the winter in a scratching-room 14x14? How many of same breed can I keep in a run containing 30 square rods? How much feed should a bird of same breed have per day?

Thompson, Iowa. W. H. C.

Answer.—Partridge Wyandottes are not different in their keep and room necessary than any other breed of fowl. Your scratching shed will fairly accommodate from 12 to 15 birds of any kind. The quantity of feed to be allowed to each bird per day is as much as they will greedily eat twice a day; in addition to which a couple of handfuls of small grain per day scattered in their litter will keep them fairly busy.

BUILDING A POULTRY HOUSE.

Having been raised on a farm and drifted into the city, and feeling that desire to get back into the country, two years ago we bought a small place in the good old town of Hampden, Me., about five miles by electric cars from my work, and I at once decided that I must have some hens. In the spring of 1905 I bought and set several hens, and when the chickens hatched out, built a large coop and a yard for them. There being no buildings but a house on the place, of course a henhouse was next in order, and after reading up on the subject in the leading poultry publications, I built a house 10x22 feet, 6 feet posted and 7 feet double pitch roof. After boarding it all in I covered the north side and west end with a sheet of wood pulp, which can be bought at some of our Maine pulp mills, which is about 18 feet wide and about an eighth of an inch thick, and very warm. I covered the south side and east end with building paper and shingled the entire building. I had three windows in the center of the south side, one in the east end, also a door, and then painted the entire building with flexible carbon paint, which is a coal tar product and of a dead black color. I then filled in up to the sills with clay, and then to the tops of the sills, which were of 6-inch material, with good gravel. I used the house in that way for the first year, but this season the gravel having settled somewhat and some having been shoveled out during numerous cleanings, I had a good cement floor put in about an inch in thickness and coming up to about an inch of the tops of the sills. I divided this house on the inside with wire into three pens, and run the dropping boards along the entire north side about 2½ feet wide. For roosts I took some 2x4 spruce and hemlock, slit it through the center, making it nearly 2x2, and morticed it into end pieces of the same material, about 2¼ feet long, attached it to the wall with 4-inch strap hinges, and then putting a screw-eye about 2 feet above each end and another in each endpiece, connected them with strips of small pack chain, which can be purchased at any hardware store at about 35 or 40 cents per dozen yards. The wood was all carefully planed, and the roosts will tip up and back out of the way, and I con-

"Better Than Gas!"

SAYS THIS NEW YORKER:

"I have used The Angle Lamp far beyond the time set for trial and find that one cannot be too enthusiastic over it," writes Mr. Granville Barnum, of Cold Springs, N. J. "It certainly gives the brightest and at the same time the softest illumination one could desire."

"We lived, for some years, in New York City, and used the latest and most improved appliances, devices, etc., in connection with gas or electricity and yet I must sincerely urge the superiority of this simple yet wonderful method of illumination. One can hardly say too much in its praise."

Notice, please, that Mr. Barnum has used gas and electricity with all the most improved devices for years. He, like thousands of others who use these systems, would probably have pooh-poohed the idea that an oil-burning lamp (or any other system for that matter) could be more satisfactory—until he tried The Angle Lamp.

He now admits that The Angle Lamp is far superior. For he has found from use that this oil-lamp gives him all that either gas or electricity can give in convenience, and something more—kerosene quality light. It floods his rooms with the finest, softest, pleasantest of all artificial lights. Yet the Angle Lamp pays for itself.

For where the ordinary lamp with the round wick, generally considered the cheapest of all lighting methods, burns but about five hours on a quart of oil, The Angle Lamp burns a full sixteen hours on the same quantity. This, even where oil is cheap, soon amounts to more than its original cost. But in another way it saves as much, perhaps more.

Ordinary lamps must always be turned at full height, although on an average of two hours a night all that is really needed is a dim light ready to be turned up full when wanted. A gallon of oil a week absolutely wasted, simply because your lamps cannot be turned low without unbearable odor. All this is saved in The Angle Lamp, for, whether burned at full height or turned low, it gives not the slightest trace of odor or smoke.

Why White Light Causes Blindness

We have given you several good reasons why you should use Angle Lamps for lighting your home, reasons that appeal to your pocket-book to your common sense and to your love of a well-lighted attractive home.

There is one more reason and it is the most important of all—the health of your eyes. The light of The Angle Lamp, while more brilliant than ordinary lamps and intensified by being all thrown directly downward upon your book, table or work, is of the soft, warm, restful quality for which kerosene oil is so justly noted—the quality which causes even the people who use gas or electricity for general lighting, to stick to oil lamps for reading or working.

There are, you know, really but two kinds of light for home use. One is this splendid, soft, kerosene light. The other, the thin, penetrating, colorless, white light, such as comes from the use of a mantle with gas or gasoline, and the acetylene light.

A few years ago this white light was quite the rage. City people had all their gas jets fitted with mantle burners, and country people tried gasoline. But they only used them for a little while. Then they went back to the open tip burner and kerosene lamp. Not because the breaking of mantles caused a great deal of annoyance and expense, although that did have its influence. No, people went back to these older systems because they found that the penetrating mantle light was fast ruining their eyes.

Do you know that the most conscientious American manufacturers no longer manufacture what is known as the "pure white" mantle? Simply because they have found what all students of illumination have found—that the pure white mantle develops a light so thin and colorless and penetrating that it pierces the retina of the eye,

and, like the X-Ray, paralyzes the optic nerve, soon causing blindness.

Yet this pure white mantle, at first heralded as the perfect imitation of sunlight, is merely the highest development of the kind of light which some people still use because of penetrating qualities that enable them to read a long distance from the fixture. They either forget or fail to appreciate the destructive effect of this very quality on the eyes.

Now, that fact contains another thought for you about lighting—look out for any light that imitates the light of the sun too closely! For such lights are dangerous.

Because when you read or work by sunlight you use only the diffused, softened light; never the direct rays of the sun, which so quickly dazzle the eyes. But when you work under artificial light you must always use the direct rays of light; for you know that you can't read with someone "standing in your light."

Consequently, artificial light must be of softer, warmer quality than the sun's direct rays.

And that is just why kerosene is the most perfect illuminant; the direct rays of the oil light contain just enough of red and yellow to give the softened, diffused, indirect rays of the sun.

Now, Reader, if you are interested in a satisfactory lighting method—a method which will cause your friends and neighbors to exclaim, "How beautifully your home is lighted!"—that will save you one-third to one-half of what your present system costs you, that will give you the operating convenience of gas and a light of the soft, warm quality which fully rests and relaxes the tired nerves of the eye—then write for our catalog "59" and our proposition to prove our statements about The Angle Lamp by

30 DAYS' TRIAL

Yes, write for catalog "59" and do it now. For, surely, when such people as Ex-Pres. Cleveland, the Rockefellers, Carnegies and thousands of others find, after trying The Angle Lamp, that it is profitable to tip out gas and electricity, to throw away gasoline and acetylene outfits or ordinary lamps, it is worth your while to send a penny postal to find out about it.

Our catalog "59" listing 32 varieties from \$1.80 up, and our booklet, "Lighting and Common Sense," which gives you both the benefit of our ten years' experience and experiments with all known lighting methods, are free on request.

Of the late firm of Johnson & Stokes
219 Market Street
Philadelphia

sider them the best arrangement I have ever seen. I have this fall added 12 feet on to the end of this building, 4-foot posted instead of 6, and like this much better. I have a 14-inch ventilator in the top of the roof of the main building this winter, substituting it for one of 6 inches, which I put in when I built the house, and have much less trouble with frosted walls—in fact, while last winter there was a great deal of frost on the walls, there has been practically none as yet this winter, although we have had a week of zero weather and as low as 28 degrees below. I have a south window open every sunshiny day for two or three hours, and the hens just enjoy every moment of it. As to feeding, I have about forty-five birds—Plymouth Rocks, White Wyandottes and S. C. Brown Leghorns—and every evening I scatter about two quarts of a mixture of two-thirds oats and one-third wheat in the litter for them when they come down from the roosts in the morning. This litter is about 6 inches deep and composed principally of dried leaves, which I had raked up and stored for them. This keeps them active for a time. I give them warmed water twice a day and keep a mixture of one-third each bran, cornmeal and wheat middlings before them all the time in troughs built after the Maine Experiment Station plan. I give them green cutbone twice or three times a week, and at noon time beets, apple or potato parings or some green stuff. During this season of the year I give them for their night feed about a quart of clear corn in their litter at 3 o'clock. With this system, including crushed charcoal and oyster shells, which are before them all the time, I have been getting eggs right along, while all my neighbors tell me they are not getting an egg.

I am not trying to keep a large number of hens, but a few choice ones of the above breeds, and in my own way am testing them out with the intention of choosing about two breeds for permanent keeping.

A. S. ALLEN.

INCUBATOR A SIMPLE AFFAIR.

Because the word "machine" is often used in describing an incubator, many people suppose that hatching chicks in one is a complicated job.

Not so, unless an incubator is selected that has a lot of unnecessary, useless, untried apparatus to confuse one.

There are a good many incubators, but one that stands in the front rank for simplicity, ease of operation, a favorite with beginners, is the Pineland incubator, made by the Pineland Incubator & Brooder Company, Jamesburg, N. J.

There is nothing about the Pineland to confuse or mystify, no matter how little a person knows about hatching chicks. It is easy to understand, economical of oil, keeps a uniform temperature, the regulator is easily and quickly regulated. It has a nice, neat interior appearance, good enough for any dining room or kitchen, where often the farmer's wife hatches her money-makers during the cold months.

The Pineland brooder is just as simple. It beats a hen for cleanliness, lack of mites and lice; protects the little ones from cold and diseases caused by exposure. A postal card sent to the makers will bring a catalogue free that explains all about both incubators and brooders.

Geo. J. Gleason, Dunlap, Iowa, the Silver Wyandotte specialist, has a fine lot of stock for this season's trade and is prepared to fill all orders promptly, and guarantees satisfaction to every customer. Mr. Gleason has made a good record in the show room with his Silvers and certainly knows how to produce the good ones. Write him your wants and mention American Poultry Journal.

Prussian Remedy Company,

St. Paul, Minn.

A PROSPEROUS BUSINESS THAT IS NOW A QUARTER OF A CENTURY OLD.

In European countries it is not at all uncommon to find business enterprises which date their establishment back for more than 100 years.

In our own country, in consequence of its being new in discovery and development, it is only in recent years that business firms have been able to point backwards to any considerable period of existence in the commercial world. We now have some firms, however, that can rightly claim prestige by reason of having faithfully catered to public needs during a long period of time. Such a firm is the Reliable Incubator & Brooder Company, of Quincy, Ill. The year 1907 marks the twenty-fifth anniversary of the establishment of their business.

The estimate placed by the public upon the product of this firm is evident by the constant patronage and increasing trade which they have enjoyed during the past twenty-five years. To keep pace with the ever increasing demand for their goods they have found it necessary from time to time to enlarge their capacity and their facilities for turning out their machine. Their trade has grown to such extensive proportions that the name "Reliable" in connection with incubators, brooders and poultry supplies is known all over the world; in fact, their goods have come to be recognized among poultry producers as a standard for excellence and reliability.

It has been the constant aim of this concern to keep abreast with the times and to manufacture a strictly high grade line of goods. That they have succeeded in so doing is evidenced by the thousands of commendatory letters which they receive from pleased customers.

Their catalogue this year they have styled their Silver Jubilee edition. It is an interesting book of 136 pages, filled with useful information in regard to the hatching and rearing of poultry and giving complete description and detailed account of the machines which they manufacture and supplies which they sell. The book has a very attractive cover which is executed in black and silver. Anyone interested in

poultry matters will be well repaid for sending for this catalogue. Those desiring it should address Reliable Incubator & Brooder Company, Quincy, Ill., mentioning this paper.

Griggs Bros., Toledo, Ohio, informs us that their poultry and beekeepers' supply business has increased to such an extent that it became necessary to organize a stock company in order to properly handle the business, and the company is now known as The Griggs Bros. & Nicols Co. This year they will handle the Model Incubators and Brooders and the Prairie State Incubators and Brooders. This is acknowledged to be the largest house of its kind in the country, and at all times carries a complete line of poultry and beekeepers' supplies. They have just issued a large catalogue which should be in the hands of every poultryman and beekeeper in the country. They are also breeders of Single Comb Black, Brown and White Leghorns and Barred Plymouth Rocks and can supply eggs in season and stock at all times. Write them today and mention American Poultry Journal.

Rats and mice are so destructive and the usual methods for their extermination so unsatisfactory, that it is of interest to know that a highly scientific article can now be had for the successful extermination of these troublesome rodents. We have reference to the rat virus furnished by the Pasteur Vaccine Company, Limited, of Paris, London, New York and Chicago. This virus produces a contagious and mortal disease that only affects the rodents. As it is not a poison, it can be used where other methods would be dangerous. We would recommend that you write to the Pasteur Vaccine Company, mentioning this paper.

The Maple Farm Poultry Yards of Frechtown, N. J., James Kugler, Jr., proprietor and manager, are making great progress with their Buff Leghorns. This season has been a very successful one with them and the demand for the Buffs is growing larger every year. Any one needing a cockerel or anything in the line of Buff Leghorns should write the manager for prices. If you will write and mention this paper they will send you a free cir-

cular of their Buffs. Good quality Buff Rocks and White Rocks are also bred on this farm.

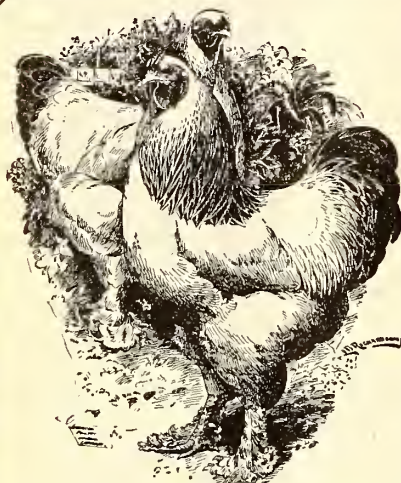

J. B. Howe, Kentland, Ind., begins a yearly display ad with us this month. He is making a specialty of that great American variety, the White Plymouth Rocks. While Mr. Howe is new to our readers he is not a new man in the raising of chickens, having been a breeder of fancy poultry for the past 27 years. They say experience is a good teacher, therefore Mr. Howe should know how to produce the good ones. We ask our readers who are looking for White Plymouth Rocks to write to Mr. Howe and mention American Poultry Journal.

The illustration of Silver Wyandotte hen in this issue, owned by A. and E. Tarbox, Yorkville, Ill., has the following record as an egg producer, having laid 174 eggs from March 21 to December 8. From 80 eggs laid by this hen 76 chicks were hatched, and some very choice specimens among them. Write for prices and mention American Poultry Journal.

Edgar G. Simpson, Naperville, Ill., the Barred Plymouth Rock specialist, has a large number of choice cockerels and pullets for sale. These are Bradley Bros.' strain, pure. He can furnish either cockerel or pullet breeders and at prices that any one can afford to pay. Write him now and get first choice. His stock is all farm raised and is very healthy and vigorous.

C. N. Hansen, of Warsaw, Ky., won at Warsaw, Ky., November 21-24, 1906, as follows: 1st, 2nd, 3rd cock; 1st, 2nd, 3rd, 4th hens; 1st, 2nd, 3rd cockerels; 1st, 2nd, 4th pullet; 1st, 2nd, 3rd, 4th pen, Single Comb Rhode Island Reds. On Rose Combs: 1st cock, 1st hen, 2nd cockerel, 1st and 2nd pullet, and \$25 silver cup for best display fifty-four R. I. Reds shown. W. C. Pever, judge.

The Otter Creek Poultry Farm Co., Watertown, N. Y., still have a few birds that they are anxious to dispose of at bargain prices. Better write them today if you want a bargain.

We Want to Tell You About 3000 Prizes

This is the record made in eight weeks by birds from our Great Central Poultry Farm, and we are willing to have it compared with that of any other poultry breeder in the entire country.

These prizes were won in fair and square competition, and were awarded by America's most competent poultry judges.

This is the kind of stock we offer for sale, and which you get when you buy birds from the Great Central Poultry Farm. We can supply thousands of them bred on the same line as our prize winners.

Our experience as successful breeders of poultry covers a period of thirty years. Our stock includes all the popular and best paying varieties, including Light and Dark Brahmas; Barred, White, Buff, Silver Penciled and Partridge Plymouth Rocks; Silver, Golden, White, Buff, Partridge, Silver Penciled and Columbian Wyandottes; Black Javas; American

Dominiques; R. & S. C. R. I. Reds; Buff, White and Partridge Cochins; R. & S. C. Brown Leghorns; S. C. Buff Leghorns; R. & S. C. Black Minorcas and S. C. White Minorcas. All varieties of Polish; Black B. Red Games; White and Cornish Indian Games; Silver Spangled, Golden Spangled and Black Hamburgs; Anconas; Blue Andalusians; White Faced Black Spanish; Houdans; all varieties of Bantams; Embden and Toulouse Geese; Pekin, Rouen and Colored Muscovy Ducks; White Holland and Bronze Turkeys, and all varieties of Pigeons, including Homers. Remember that these are

ALL PURE BRED BIRDS

of superb quality. They have been well housed, carefully handled and are free from disease. All eggs sold from our pens are from the same stock that we use in our own incubators; guaranteed fresh, fertile and true to name. We make all shipments promptly. If you wish to secure high quality of stock at reasonable prices send 10 cts. for our new catalog containing full description of the Great Central Poultry Farm, beside many useful articles on the care and management of poultry.

F. W. NIESMAN COMPANY

....

Box 40, FREEPORT, ILLINOIS

The Missouri State Show, held at Pleasant Hill December 11 to 14, was a grand success, which was due principally to the hard work of its secretary, Mr. Quisenberry; also Mr. Thompson and our old friend Archie Maxwell, from Fayette. In Barred Rocks Mrs. Della Maxwell, from Fayette, Mo., exhibited her first World's Fair hen, "Louisiana," which was the talk of the show. In White Plymouth Rocks Mr. Miller, of Crescent, Mo., captured everything worth taking. Bridgeman and York won most in White Wyandottes. Mrs. W. S. Robison and Mr. Delventhal divided the ribbons on Buff Rocks. Mr. T. E. Applegate, Spicard, Mo., won most on Brown Leghorns. A. B. White won on Black Langshans.

A. B. White, Nichols, Mo., breeder of Black Langshans, won the following at the Missouri State Show, December 11 to 14, 1906: First pen, second hen, third and fifth pullet and the most coveted prize of first cockerel. Also sweep-stake silver cup for highest scoring pen of black fowls in the show. He also won several prizes at the Missouri State Fair. Mr. Miller has about 50 cockerels for sale; also Buff Cochins Bantams that are right.

Strange as it may be, much time has been spent on perfecting the incubator while the brooder has long been neglected. The result is that it isn't so hard to hatch the chicks, but to raise them—well, that is a different story. Yet to raise the chicks is the most important part. The poultryman's annual success depends on his crop of chicks. Indeed, the raising of the chicks is a most important work—it is a work that decides whether success or failure will be your lot.

Those who raise chicks for breeding purposes are interested just now in brooders. They are anxious to buy and use good brooders, that they may raise the majority of the chicks hatched. This raising of the chicks is no easy work. It demands first of all a good brooder, then good feed and care.

What constitutes a good brooder? First, a brooder should be well built; it should be

storm proof and rain proof; it should be sanitary; it should brood as nature does. Indeed, it is strange that what time has been spent in inventing brooder systems has resulted in so little improvement. Most good brooders have been built well and plenty large, but their brooding system is as different from nature's as day is different from night. It seems odd that men so well acquainted with nature that they could build an incubator to take the place of the old hen for hatching, would fail so utterly in making a brooder that broods as nature does.

Yes, a brooder to succeed must "brood as nature does;" nature's principles must be embodied in its construction. The Root brooder, manufactured by the Root Incubator Company, Cleveland, Ohio, is just such a brooder. In it the chicks are warmed just as nature warms her young.

The mother hen warms her chicks by direct contact with her body; that is, the chicks get their warmth by coming in contact with the warm body of the mother hen. In the Root brooder the chicks get their warmth by contact also; they come in direct contact with warm tubes.

The Root brooder, because of its brooding system, is very simple in construction. It is strange someone else hasn't worked out its plan long ago. Those interested in Brooders should write the Root company for their free literature. However, the Root brooder is not a cheap machine. It is built for business and is guaranteed to do well the work intended for it, or it may be returned at the Root company's expense and your money refunded. For catalogue address the Root Incubator Company, Dept. B, Cleveland, Ohio.

E. L. Delventhal, Warrenton, Mo., made a creditable exhibit at Missouri State Show. He won the regular prizes, special for best colored male and special for best shaped female in one of the strongest classes of Buff Rocks ever shown in the state. Mr. Delventhal is a gentleman of high standing; he guarantees satisfaction.

Mr. Julius Bachmann, Kansas City, Mo., has a national reputation as a breeder of Silver Wyandottes. We take great pleasure in recommending Mr. Bachmann to all readers of the American Poultry Journal. He has a few birds to sell that have been scored by Judge Southern. He does not sell eggs for hatching.

Mrs. W. S. Robison, of Fayette, Mo., won at Linn County Poultry Association, Brookfield, Mo., December 3 to 8, 1906, as follows: 1st and 2nd cock; 1st, 2nd, 3rd, 4th cockerel; 1st, 2nd, 3rd hen; 1st, 2nd,

3rd, 4th pullet; 1st, 2nd, 3rd, 4th pen. C. H. Rhodes, judge. Twenty-six in Buff Rock class.

Bridgeman & York, Forest City, Mo., breeders of White Wyandottes made by far the best winnings at the Missouri State Show, Dec. 11-14, 1906, winning 3 first (tie for 1st cockerel), 2 seconds, 2 thirds, 2 fourths, 2 fifths, \$20 silver cup, and White Wyandotte club cup. Their birds are of that broad, blocky type that all breeders are looking for. As to color they compare with any in this country and their big winnings at this show are merely a repetition of former records. White Wyandotte breeding is not a side issue with them for they are devoting 65 acres to this popular breed and are able to meet all demands.

Coburn's Mammoth Poultry Farms, R. R. 29, St. Louis, Mo., are now booking orders for eggs of White Wyandottes, Barred Rocks, Rhode Island Reds, and 17 other varieties. They also have in the neighborhood of 1,000 exhibition and breeding birds. These farms are located in Wellston, one of the suburbs of St. Louis, and can be reached by street cars. A visit will convince you that they have the stock.

The Buff Plymouth Rock class at the late Missouri State Show was a hot one. Mrs. W. S. Robison of Fayette, Mo., won 1st and 4th cockerel, 2nd and 3rd hen, 4th and 5th pullet, 3rd cock; also American Buff Plymouth Rock cup, special for best surface colored female and three other specials.

Sunnyside Poultry Farm, of Macon, Ill., won at Christian County Poultry Show, Taylorville, Ill., Dec. 5, 6, 7, 8, 1906, as follows: 1st and 2nd cock; 1st, 2nd and 4th cockerel; 1st, 2nd and 4th pullet; 1st, 3rd and 4th hen; 1st and 2nd pen. Rigg, judge. Sixty-five in Barred Rock class.

The De Graff Poultry Farm, Amsterdam, N. Y., exhibited one pen of S. C. Rhode Island Reds at the Holyoke show, winning first and showing them what reds raised in De Graff brooders and fed in De Graff hoppers look like. They were all over weight and looked like hens.

T. E. Applegate, Spicard, Mo., breeder of Rose and Single Comb Brown Leghorns, won the following at Missouri State Show, Pleasant Hill, Mo., Dec. 11 to 14, 1906: 1st and 2nd cock, 1st and 2nd cockerel, 1st, 2nd, 3rd, 4th hen, 1st and 2nd pullet in hot competition.

Start the New Year Right

hold magazines is toward elaborate decorations in the home, and complicated recipes in the cooking department, requiring not only skill and time, but expensive materials. In these days, when the problem of getting domestic help is becoming more and more difficult of solution, women are more than ever taking upon themselves the burden of doing their own housework. If the rules laid down in the average women's magazines are carried out, the days will not be long enough for the preparation and serving of the meals, to say nothing of the rest of the housework.

The pity of it is that it is all so unnecessary. Simple things, which can be quickly and economically prepared, are just as delicious and far more nutritious than the more complicated ones which

LEE'S LEADERS

Keep your hens in a laying condition all winter—feed Lee's Egg Maker. Every egg the hen lays is made from the food she eats—if she don't get the materials that make eggs she can't lay.

Egg Maker

is composed mostly of granulated blood (deodorized)—a concentrated protein, the main ingredient necessary for a large egg yield. It does not contain a particle of sand, grit or cheap filler but every ounce of it is egg food. Egg Maker has been fed by successful poultry raisers for years—that's one reason why you should try it—the main reason is it pays. Price, 25c., 50c. and \$2.00 according to size of package. Sold by dealers or sent direct.

Just now you need Germozone to cure Colds, Roup, Frosted Combs and all ailments peculiar to this time of year.

Germozone

twice a week in the drinking water prevents sickness, cures Canker, Swelled Head and prevents Cholera. A 50c. package will keep your chickens well. Sold by dealers or sent direct.

This is the no bother kind of lice killer—no greasing, dusting or handling of fowls. Simply spray

Lice Killer

on the roosts, nests—the lice die. Sold everywhere or sent direct. Price per can 35c., 60c. and \$1.00. Write for poultry books and "Mandy Lee" catalog.

Winter Eggs. How To Get Them.

Are you getting any eggs this winter? If not let us show you where the trouble lies. While you are keeping chickens through the winter you may as well make a profit on them. Our method makes them more than pay for their feed in eggs, even when grain is high and green food scarce. Everybody's chickens lay eggs in warm weather. We show you how to get eggs in winter, even from late hatches—and you can prove it at our expense. You know that some fowls lay eggs all winter. If yours don't, why not find out the reason.

Coop poisoned fowls cannot lay eggs at any time, neither can a sick fowl. With our method fowls are kept absolutely free from lice, colds, roup, diarrhoea and cholera. We have something for coop poisoned flocks, too. We show you how to get weight and size in exhibition poultry, and how to raise all little chicks and turkeys that can be hatched. We can help you, but you must write us first. Send a postal card today. We will send you free receipt by next mail.

WHERE THE WORLD'S FAIR WINNERS WERE BRED, AND STILL BREEDING GOOD ONES

"LOUISIANA," 1st prize hen at World's Fair, is still in my possession, also her mother and sisters and their offspring of 1905. I have shown at 7 out of 9 of the last Mo. State Shows and have won more 1st prizes at the 7 shows than all competitors combined. Won \$15 cash special at Sedalia for the best pen in the American class; also the \$75 Challenge Cup 2 years in succession for the 2 best cocks, 2 best hens, 2 best cockerels and 2 best pullets. At St. Louis World's Fair, 1st hen and 5th breeding pen. In the Missouri exhibit at same time, 1st hen, 1st pen and 4th cock. At Mo State Show, 1905, 1st pullet and 1st cock; lost 1st hen and 1st pen by 1/4 lb. overweight, which is no bad defect. At Moberly, Mo., 1905, 1st, 2d hen; 1st, 2d, 5th pullet; 2d cock; 1st, 3d pen; won \$75 Trophy Cup in 1903. I am better than ever prepared to sell first-class breeders at reasonable prices. All birds have free access of a 300-acre farm, are vigorous and healthy. My stock is noted for size and sound color in plumage, also the finest laying strain that can be had. Mammoth Brouse Turkeys, unequaled in size and plumage; Pekin Ducks and Scotch Collie Dogs, eligible to registry. Eggs in season, from show birds, \$5 per 15; from the good yards, \$3 per 15; M. B. Turkey eggs, 5c each. Will duplicate eggs at half price when less than 8 hatch. Satisfaction guaranteed. Write your wants to

represent hours of toil in the kitchen. A simple meal well cooked and daintily served will make a feast fit for the gods. The little touches which take but a moment, the pot of ferns from the woods, or the little vase of flowers, for the center of the table, a few pieces of parsley (raised in the kitchen window) used as a garnish on the meat platter, the care

with which the table is set, and not the quality of the linen and dishes or the elaborateness of the menu, are the things which make or mar the meal.

Let us in all the departments of household life aim for simplicity, for in this way we will be the masters and not the slaves of our fancied duties.

The man behind the Planet Jr.

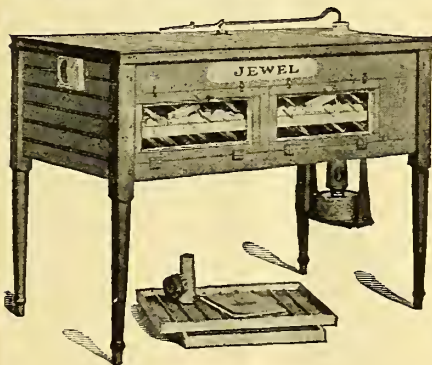

knows it takes more work off his hands, and makes him do better gardening, than any other garden implement made. Besides, Planet Jr. Seeders, Wheel Hoes, and Cultivators are well made and they are guaranteed—no other maker uses such materials or puts such work into his tools. Half a million users know how long they last.

The New No. 6 Planet Jr. Combination Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow is a whole set of the strongest and most useful garden tools ever turned out. It saves your time, labor and seed and runs easily in any soil. Does the work of three to six men, and does it far better. Opens the furrow, sows any kind of garden seed accurately in drills or in hills 4, 6, 8, 12 or 24 inches apart, covers, rolls the ground and marks out the next row—all at one operation. As Wheel Hoe, Cultivator, or Plow it adapts itself to every kind of crop, and is used all through the season.

We are glad to send anybody interested, our New Catalogue showing many scenes of successful gardening and 1907 Planet Jr. implements—Seeders, Wheel Hoes, Horse Hoes, One- and Two-Horse Riding Cultivators, Harrows, Orchard- and Beet-Cultivators—45 kinds in all. Even if you have a Planet Jr. send for the 1907 catalogue and see the new things. Write today.

The Jewel Incubator's Success Well Earned

Success was well deserved, for the most severe critics say that Jewel Incubators and Brooders in competition with well known machines hatch and rear better chicks than they have ever seen done before. Jewel Incubators not only turn out big hatches, but Jewel Brooders rear more chicks that are hatched than any other machine known.

International Stock Food Co.,

Minneapolis, Minn.

Gentlemen:—Jewel Incubators are the best machines made. I have seen a good many makes, but the ventilating system in the Jewel beats them all.

Very truly, Willis A. Slate,

South Windham, Conn.

99 per cent Hatch by L. H. Moran, Montfort, Wisc. 100 per cent Hatch by F. F. Wheeler, Moscow, Penn.
95 per cent Hatch by W. J. Bailey, Owingsville, Ky.

Does it pay to take chances with inferior machines? The evidence is strong in favor of the Jewel. No other incubator or brooder has met with such universal favor as the Jewel. Our new mammoth Catalog tells of the wonderful success of our Incubator and Brooder. It tells how to raise good poultry. Ready for mailing January 1st. Send us your name now. We have something to tell you that is true about good incubators and brooders.

BIG THINGS IN THE POULTRY WORLD.

Encouragement for Such Poultrymen As Need It—Satisfaction for Those Who Now Take Part in This Great Industry—A Business in Which a Single Firm Publishes a Book Containing Illustrations Enough to Cover a 100-Acre Farm.

Such information as the following will make all poultrymen more enthu-

sia and confident, and it is enthusiasm and confidence in the poultry business that has made it what it is and that will continue to make its workers prosperous.

There is no more encouraging sign of the extraordinary prosperity of the poultry industry and proof of the fact that it is a remunerative business than the success of large firms that manufacture and sell supplies to poultrymen. It affords great encouragement to those who expect to take part in the raising of poultry either to secure pocket money or an independent living.

The splendid book just issued by Cyphers Incubator Company of Buffalo is stronger evidence of the importance of the poultry business than any other one thing we can name. This

information which poultrymen like to get, have taken up so much space that it could not be included in less than 260 pages.

When we state that this catalogue is fully illustrated it fails to convey an idea of the number of pictures it contains, but if we add that the illustrations in the 1907 issue would cover a 100-acre farm with pictures, and cover it so well that there would not be an inch of ground visible, it will be better understood how profusely it is illustrated. If these catalogues were piled flat one on top of the other, they would rise to a height of 4,557 feet in the air; if the pages were placed edge to edge, they would reach 5,468 2/3 miles, or further than the distance from New York to San Francisco and back east as far as Buffalo, and would more than equal the distance from the East Coast of America across the Atlantic Ocean to Europe and back again. Place the pages side by side and they would cover a 450-acre farm and have enough left over for a fair-sized poultry farm. A letter to the Cyphers Incubator Company, Buffalo, N. Y., or to their nearest branch office (either New York, Boston, Chicago, Kansas City, Oakland, Cal., or London, Eng.), will bring you the wonderful catalogue we have referred to as quickly as the mail can carry it, and free of cost to you.

Three Million Eggs at One Setting.

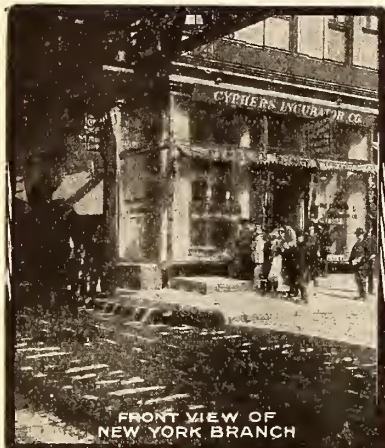

It must be that the incubators and poultry supplies that have formed the foundation for such a business as can publish a book like that are goods of quality. It is easy to illustrate quantity as we have done, but not so easy to illustrate quality; yet when we find so many letters telling of satisfaction with these goods as are contained in the catalogue; when we know that so many of these incubators and brooders have been in continual use for years and are still in use, the reason for their popularity is clear to us.

Consider how many incubators were manufactured by Cyphers Incubator Company during the eight busiest months of last year; estimate the egg capacity of the various sizes and it will be found that at one setting they would have a capacity of 2,963,950 eggs; and, considering that this estimate is for large eggs, then if we consider average sized eggs only it means practically three million eggs at one setting—and this on only a portion of one year's manufacture of incubators.

After what has been stated above, it will not be surprising to know that half a dozen of the big duck plants which operate Cyphers Incubators have a capacity of 168,310 duck eggs at a single setting, being half a million duck eggs for a couple of months or so hatching in the spring. Two of the plants referred to each use one hundred incubators or over, and it is a common thing for plants these days to use twenty-five to thirty Cyphers Incubators. These plants are all illustrated by photographic reproductions in the big catalogue we have described. Doubtless hundreds of poultrymen who read these lines use a dozen or more of those down-to-date machines.

Poultry Farm for Testing Improvements.

In order that the incubators, brooders and other articles sold may be tested before being placed upon the market (in consideration of the many im-

BRANCH OFFICES AND WAREHOUSES OF CYPHERS INCUBATOR COMPANY, BUFFALO, N. Y.

For the convenience of their customers Cyphers Incubator Company has branch offices and warehouses at New York, Boston, Chicago, Kansas City, Oakland, Cal., and London, England.

There is no more encouraging sign of the extraordinary prosperity of the

book has always been one of the prides of poultrymen, and a most popular publication. It has contained usually about 228 pages, but this year the goods manufactured and sold, letters from prominent poultrymen, valuable chapters on poultry keeping and other

book has always been one of the prides of poultrymen, and a most popular publication. It has contained usually about 228 pages, but this year the goods manufactured and sold, letters from prominent poultrymen, valuable chapters on poultry keeping and other

provements this Company is making in its goods year after year) it purchased a year or two ago a fifty-acre poultry farm. On that farm there are now ten permanent poultry houses, ranging from 130 to 180 feet long; a three-story feed and killing house; superior down-to-date barn and stables; a couple of incubator cellars and brooding houses; students' library and bedrooms, and a new residence for the manager. During the past summer there was utilized, in addition to the permanent poultry houses, over one hundred portable poultry houses as manufactured and sold by the company. The farm is well stocked with fowls of all the popular breeds, some of the fowls having been bred for exhibition, others for egg production and still others for market purposes, quick growth, etc., and the demand for stock and eggs for hatching already tests the farm and its 5,000 breeding fowls to its utmost capacity.

This company does a large export business and has won gold medals and special diplomas in competition with the greatest incubator companies in Europe, Australia and South America, not forgetting New Zealand. It is well known that the gold medals at the Pan-American Exposition, Buffalo, N. Y.; the World's Fair, St. Louis, and the Lewis and Clark Exposition, Portland, Ore., were awarded to this company.

The Biggest Incubator Factory in the World.

Cyphers Incubator Company has just now entered its new executive offices at Buffalo and begun operations in its second factory.

The number of customers this company has among poultrymen cannot be estimated, but the amount of business they do may be inferred when we state that the new main office at Buffalo is 130x50 feet in size, in addition to the offices and reception rooms for the officers of the company and visitors, which add another 14 feet by about 180 feet, and this does not include the shipping offices nor the factory offices, which are in separate parts of the building. This new factory building has in itself a floor space of 202,900 buildings at Buffalo of 235,947 square feet. The Kansas City mill, operated by this company for the manufacture of poultry foods alone, possesses 30,000 square feet of floor space, and if we include the floor space occupied by the other branches of the company (which are operated by separate managers at New York, Boston, Chicago, Kansas City, Oakland, Cal., and London, England, etc., etc.), the surprising total of nine acres of floor space will barely cover it.

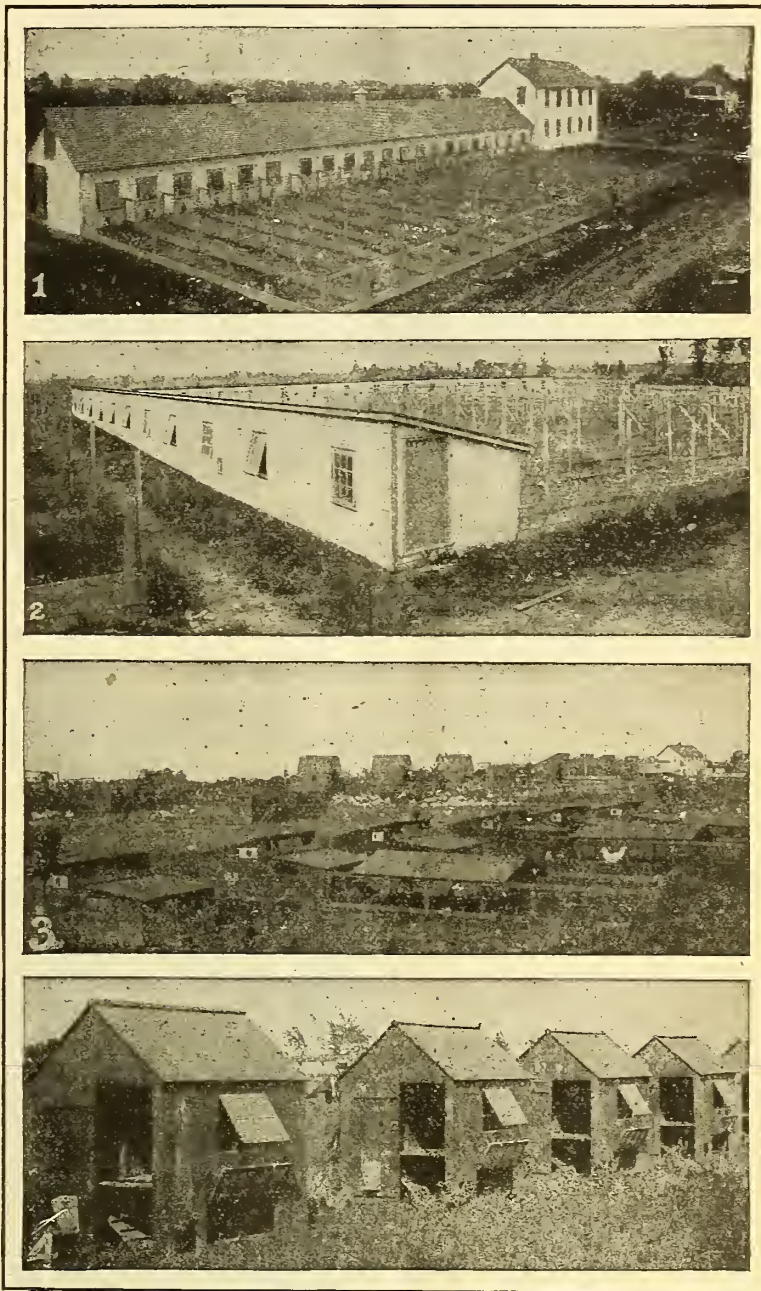

If you want to know how big is the business in which you are interested, send for this great 260-page book. Address Cyphers Incubator Company, Buffalo, N. Y., or the branch nearest to you, namely, New York, Boston, Chicago, Kansas City, Oakland, Cal., or London, England.

Poultry shows are schools of poultry culture in which the amateur poultryman gets his schooling, and, therefore, should be well patronized by this class of fanciers.

ANCONAS.

Finding that in the December issue of the American Poultry Journal a subscriber and reader of that journal is desirous of getting some information respecting Anconas, and myself having had thorough experience with them, I take them up as my article for this month, with great hopes that it will be judged to be meritorious enough to

conna first found its way to this country is doubtful, as the name has been given to various fowls of different origin. Some years ago the black and white Minorca were crossed together and the offspring thus produced were described as Anconas in the poultry books of the day. But about the year 1883 another variety was introduced direct from Ancona, north Italy. These fowls were exhibited at shows, where they attracted consid-

VIEWS OF CYPHERS INCUBATOR COMPANY POULTRY FARM.

- (1) The first Brooding House and Incubator Cellar. A second double the length is now being erected.
- (2) A quadrangle of Experiment Poultry Houses, 130 to 180 feet long.
- (3) A few of the Cyphers Brooders and Portable Houses in use on the farm.
- (4) Part of a row of Portable "Suburban" Poultry Houses.

be in the prize list, and hence published.

It is a fowl that is steadily increasing in public estimation—a light, quick, active bird, whose special object in life appears to be to lay a great number of eggs. This it will do in winter as well as in summer, frost and cold weather having no effect upon it. When the An-

con first found its way to this country is doubtful, as the name has been given to various fowls of different origin. They had yellow beaks and yellow legs mottled with black, the plumage splashed black and white, and in shape and type taking much after the Leghorn.

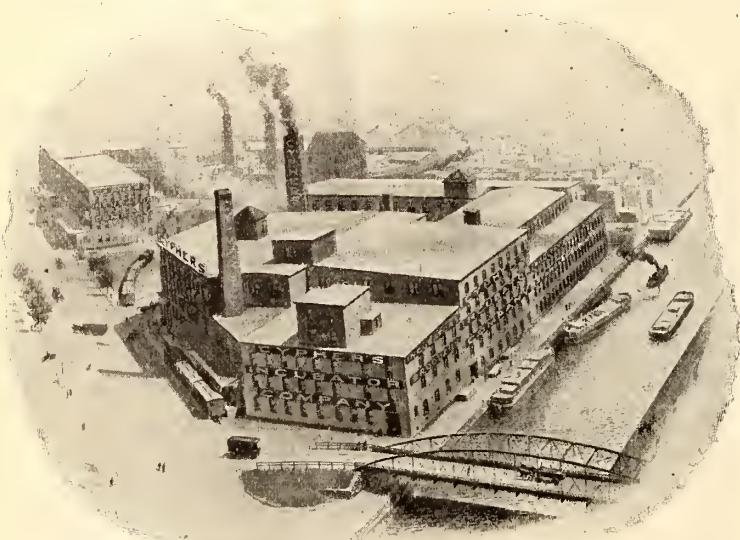

Except that Anconas require to roost in well ventilated houses, and they do not like continued wet, they are very hardy. The mature wonderfully quickly,

the pullets in many instances commencing to lay soon after they are four months old. They are not large fowls, and so are in little esteem for the table. But they are very plump and the flesh is of a nice quality. The eggs of some strains are decidedly small, though many hens will lay two hundred in the year. With the majority of the breeds of fowls

A DAY ON THE FARM OF WILLIAM MILLER, CRESCENT, MO.

(By a representative of the American Poultry Journal.)

Twenty miles from St. Louis, on the St. Louis & San Francisco Railway, is located the little village of Crescent.

CYPHERS INCUBATOR COMPANY'S NEW FACTORY, BUFFALO, N. Y. It covers a floor space of 202,900 square feet. (The old factory in the background will also continue in operation.)

at the present day size is considered an important feature, so attempts are made to make the Ancona as large as possible. This desire for size has led to a lot of crossing, particularly with the Minorca, and therefore the hardness of the bird as it originally came to us will probably suffer.

In 1899 Ancona breeders met and discussed the type of bird which should constitute the standard, as there was much difference of opinion on the subject. A scale of points was drawn up and agreed upon after much controversy. The color of the legs of the bird was a debatable point, whether they should be yellow or yellow spotted with black. The latter color was decided on. The question of plumage was settled in favor of black with uniform tippings of white on each feather. It had to be produced, and so recourse was had in some instances to other breeds and to further mixed parentage, the White Leghorn among them. This has led to Anconas being of two styles, the old style and the new style, as they are now called. The former are the best for utility purposes, the latter for exhibition.

A common characteristic of Anconas is shyness or wildness. They will become very tame in the presence of the person who feeds them, eating from the hand like a bantam. But if a stranger goes near them they will bolt or fly in all directions, making any other breed of fowl that is kept with them as wild as themselves. They can also fly like pheasants, and if kept in a confined space the run should be wired in at the top. They are inclined to be pugnacious with other fowls, the hens ill-treating any bird that admits their superiority, and the cocks fighting with much pluck; still they are pretty useful fowls and an acquisition to our list of poultry, even though the fancier is likely to spoil them by breeding for fancy points of feather.

A. V. Meersch.

This town has become famous since Mr. Wm. Miller established "Fair Lawn Poultry Yards." The writer has known Mr. Miller as being one of the foremost breeders of white Plymouth Rocks in the country, but never anticipated seeing such a large and well-managed farm. This farm consists of 70 acres of the finest well-drained land in St. Louis county and is devoted entirely to the breeding of high-grade White Plymouth

winnings are still in the minds of the breeders, but for those who are not acquainted with them will state that Mr. Miller won at the Illinois State Fair, September 28th to October 5th, 1906, the following: First, second and third cock, first hen, first and second cockerel, first, second and third pullet, first breeding pen. This has never been accomplished before by any other breeder. The awards were placed by Judge D. T. Heimlich, one of the foremost judges in the world. Again, at the Missouri State Show, December 11th to 14th, 1906, he made another grand winning, which consisted of the following: Four first, three second and six special in a class of 110 birds. He also won the silver cup for best shaped Plymouth Rock cock in the show, barred, white and buff competing, and the magnificent "Ivory Soap cup" for whitest bird in the show room. This bird was the much admired Maud M., that won also the first prize at the Illinois State Fair. The awards at this show were placed by W. S. Russell, a competent judge of national reputation. Mr. Miller informs me that all his birds for next year's breeding will score not less than 93 points, and up to 96½ points. Such matings will produce blue-ribbon winners. While Mr. Miller has made a grand success, he has to divide his success with Mrs. Miller, who is an enthusiastic fancier herself.

Visitors on this farm are always welcome. They will be well taken care of, for we guarantee Mr. Miller. He is one of our people.

Ira B. Sleet, of Warsaw, Ky., won at Switzerland County Poultry Association, Vevay, Ind., December 6-8, 1906, as follows: 1st, 2nd, 3rd pullet; 1st, 2nd hen; 1st cockerel; 1st pen; special for highest scoring bird in American class, score 96½, a hen; three specials given by White Wyandotte Club. W. C. Pierce, judge White Wyandotte class.

Robert Larmer, of Ravenwood, Mo., won at Grand River Valley Poultry Association, Maryville, Mo., December 3-7, 1906, as follows: 1st cock; 1st and 3rd cockerel; 1st,

CYPHERS INCUBATOR COMPANY MAILING DEPARTMENT, BUFFALO, N. Y.

Rocks. There are 28 yards mated for best results. These yards are 60x60, with a colony house in the middle. This gives each bird approximately 350 square feet of ground, which fact insures fertile eggs. The young stock have free range in a 25-acre orchard, with adjoining woods where large colony houses are scattered. The brooder house, a magnificent building, has a capacity of 1,500 chicks. Now, in regards to stock, his

2nd, 3rd, 4th pullet; 1st, 2nd, 3rd, 4th hen; 1st, 2nd pen. W. S. Russell, judge. Twenty-eight in Buff Rock class.

J. B. Hadaway, Brockton, Mass., won at the Brockton show in December, 1906, on Partridge Wyandottes: 1st cock, 1st, 3rd and 5th hens; 1st and 4th cockerels; 1st, 4th and 5th pullets; 1st pen; championship cup for the two best males and four best females; special for best shaped male; special for best penciled female; special for male with best comb; special for best colored female, and special for best pen.

SCOTCH COLLIE DOGS.

Dr. O. P. Bennett, Washington, Ill. (formerly Mazon, Ill.), has a litter of Scotch collie puppies for sale. His dogs are all registered and of the most approved strains. His kennels contain the blood of such noted sires and winners as Ch. Winnetka Ballyarnett Eclipse, Ch. Parbold Piccolo Parbold Polygamist, Parbold Pinnacle, Ch. Wellsbourne Conqueror, and many others. They are not only well bred, but are good individuals, and are the intelligent kind. He has both imported and American males and females.

Dr. Bennett can be found at the Chicago Poultry Show Jan. 24 to 29, 1907, as the doctor has been appointed to judge the poultry.

Dr. Bennett also breeds Superior Barred Plymouth Rocks. His winnings for the past years are too well known to require repetition. We are informed that the doctor will have a large string of Barred Rocks on exhibition at the January show.

The Continuous Hatcher made a creditable exhibit at the East St. Louis show. Mr. Hacker, the inventor of this wonderful incubator, moved the eggs, which were in process of incubation, from St. Louis to the show room, a distance of seven miles, on an express wagon, and the hatch was a surprise to all who attended the show.

This machine is constructed differently from any other because it will hatch duck and hen eggs at the same time also one may add eggs from time to time. The regulator has an expansion of five-eighths of an inch, which makes the regulation of heat perfect.

Money in Poultry.

Those interested in poultry and incubators will find it to their advantage to obtain Foy's new book "Money in Poultry," advertised elsewhere in this issue. It is one of the finest and most valuable books ever published. It is finely illustrated and contains a very large amount of practical information about the poultry business in general and is valuable as a reference book, telling the beginner how to start on a small or large scale, and how the largest pure bred poultry business in the world has been built up from a small beginning. Tells how to start right; how to make money raising fowls on the farm; how to line breed; how to win at shows; how to prevent and cure diseases; how to run an incubator and manage a brooder. This is the most valuable book for the beginner in poultry raising ever published. Revised and enlarged edition just issued. This book will be mailed for 4c, by addressing Frank Foy, Box B, Des Moines, Iowa.

We must close them out, hence your opportunity to get good, vigorous stock from prize winners at half price. First orders with remittance gets the cream, shipped same day. No personal checks unless certified. Address

DR. O. S. RIGHTMIRE Station A, Cincinnati, Ohio

Why You Should Buy The CONTINUOUS HATCHER

Because it is the simplest in construction and most certain in results of any incubator ever designed. The Continuous can be started with any number of eggs and eggs can be added until the machine is entirely filled. This enables users to incubate the eggs as soon as produced while they are fresh and the fertility is not destroyed by storage. Results more and better chicks. If the Continuous is filled entirely at the start, the infertile eggs may be removed and replaced by fresh eggs, keeping the machine always up to its full capacity, which means no waste in room or oil. The following letter speaks for itself:

Elm Wood Farm, J. E. Raleigh, Prop., Route 9, Cuyahoga Falls, June 2, 1906.

Hacker Incubator & Mfg. Co., St. Louis, Mo.

Gentlemen:—Mrs. Walter Conway's six turkey eggs have hatched five strong hearty turkeys, the sixth came out at night and got on its back and died. The eggs were put in the machine May 4 and hatched the afternoon and night of May 30, the machine making the hatch one day sooner than a hen that Mrs. Conway set on the same day eggs were put in the machine. Mrs. Conway's address is Cuyahoga Falls, Ohio. R. F. D. 9. These turkeys were hatched in both cases while the machine was making its regular weekly hatches of hen eggs. My last hatch was 74 chicks out of eighty eggs. Yours truly, J. E. RALEIGH.

Send for our free descriptive catalogue which describes fully the workings of the Continuous Hatcher.

Satisfaction guaranteed or money refunded.

A. B. WHITE - - - Nichols, Missouri

A VALUABLE BOOK FREE.

Every reader of this paper should sit down and write a postal card to the H. M. Sheer Company, of Quincy, Ill., requesting them to send their latest catalogue and book of free incubator and brooder plans. It is brimful of practical information and interesting reading, particularly for those who are interested in building their own machines. This company has prepared a set of plans that are so practical and simple anybody can build incubators or brooders from them which will have exclusive features not found on the ready made machines. You will be surprised how clearly these plans are described and illustrated, and how easily you can build a successful machine. Every step of the work is shown by over 100 photographic illustrations, leaving no chance for even those who know nothing whatever about incubators or brooders to go wrong. All parts not possible for you to make, such as lamps, regulators, doors, legs, hardware, etc., are supplied by this company at a very reasonable cost. Last year over 18,000 people were interested in these plans. We are advised that not one dissatisfied report were received and hundreds became so enthusiastic over their excellent success that they sent in letters of gratification and photographs of their "own made" machines showing the results of their hatches. The catalogue also contains illustrations and full description on the famous Acme lamp and regulator. This outfit is something far ahead of anything in the way of lamp and regulator on the market. Its great advantages

are the saving of time and labor and the annoyance so common with ordinary lamps and regulators. The tank holds a gallon of oil, automatically feeds the burner, and the combined damper and flame regulation relieves the operator of practically all the care. They can be attached to any make of machine very easily, and by any one, and will make even a poor hatcher do good work.

It only costs a cent to get this valuable catalogue and book of plans, and you will find it well worth sending for.

In writing kindly mention this paper and address your letter to the H. M. Sheer Company, ... Hampshire street, Quincy, Ill.

Ira Sitterly, of Gloversville, N. Y., won at New York State Agricultural Society fair, Syracuse, September 10 to 15, 1906, as follows: Golden Wyandottes—1st cock, 1st pullet, 2nd hen, 2nd cockerel. Golden Spangled Hamburgs—2nd cock, 1st hen, 1st cockerel. Golden Pencilled Hamburgs—2nd cock, 1st hen, 1st pullet, ten entries. Also won thirteen first prizes and two second prizes at Johnstown show, December 14, 1906.

Bonnie Brae Poultry Farm, of New Rochelle, N. Y., won at Poughkeepsie, N. Y., September 23 to 26: Single Comb White Leghorns—1st and 2nd cock, 1st pullet, 1st hen. Rose Comb White Leghorns—1st cockerel, 2nd hen, 1st pen. Pekin ducks—1st and 2nd old ducks, 2nd old duck, 1st young duck. Danbury, October 2 to 7: Single Comb White Leghorns—1st and 2nd cock, 1st and 2nd cockerel, 2nd hen. Rose

Comb White Leghorns—1st cockerel, 1st pullet. Pekin ducks—All firsts. J. H. Drenstedt judge at Poughkeepsie, Nichols at Danbury.

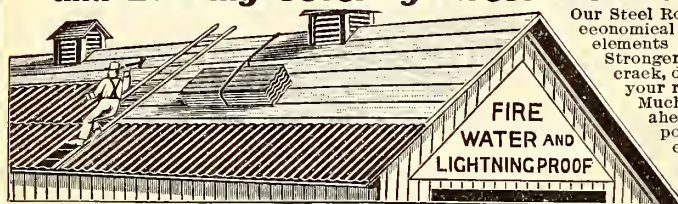

Mrs. Della Maxwell, Fayette, Mo., breeder of Barred Plymouth Rocks, was very much in evidence with "Louisiana," the first World's Fair hen at the late Missouri State Show. Mrs. Maxwell did not show for competition; this is owing to the fact that she has had enough honors. Her winnings at the World's Fair and other large shows are too well known to need repetition. One of "Louisiana's" granddaughters won the most coveted prize of special for the best Barred Plymouth Rock in the show passed upon by both Messrs. Russell and Rhodes.

The Glendale Poultry Farm, Box 1, Old Orchard, Mo., breeders of White Wyandottes exclusively, won again at East St. Louis. Their first cockerel was a very fine specimen. We understand they refused \$200 for this bird. In all probability this bird will be shown either at Chicago or St. Louis where no doubt he will win again. They have a few males and females for sale of the same breeding.

Mrs. W. H. Hand, White Hall, Ill., originator and breeder of the handsome strain of White Wyandottes, has a few very fine cockerels to dispose of. These birds have been line bred for six years. Mrs. Hand breeds all her own winners and has sold a long string of winners to other people. Every detail has her own supervision. Any one doing business with Mrs. Hand will receive fair treatment.

\$1.50 FOR 100 SQ. FT. STEEL ROOFING

Over a Million Square Feet at One-Third Reduction. Buy Your Roofing and Building Covering Direct from Us. We Save You Big Money

Just the thing for elevator siding, stores, churches and buildings of every sort. Easily laid. No special tools required. Hammer and nails, that's all. Absolutely new, fresh from our factory. All ready to put on when received. Can be laid over old roofs.

INCUBATOR JOHNSON'S PARTNER.

In some recent correspondence with M. M. Johnson, "the incubator man," he wrote the editor some things about his doings in the poultry world, which we think good enough to print. He also sent along photo of his partner, the cat, and his "Old Trusty" in operation. Most of the letter follows:

"You see, Mr. Editor, I have a poultry raising wife. I want to tell you that a poultry raising wife is good life insurance, and what's more, a man don't have to die to get the benefit.

"Mrs. J. is the only partner I recognize in my 'Old Trusty' incubator business. Those that want to have themselves adopted by a stock company corporation can do so, but not me, no, sir. Just until lately I have hardly given my partner credit for all she has done in helping to start an incubator business and continually helping until the business is in the lead.

"But that is not what I started out to tell you about. I invented the 'Old Trusty' Incubator, but my partner named it; be-

ter in your paper. You know I know a good many of your readers. Wish I could know them better. This might sort o' help along the acquaintance. Tell them, anyhow, I'm going to have a full-page ad in your paper pretty soon, maybe this next issue, which I want them to be sure and read. Yours truly, M. M. Johnson."

The "full-page ad" which Mr. Johnson refers to appears in this issue. We don't believe anybody will think it time wasted if he reads it.

WORMS AND BUGS AND EGGS.

Whoever wrote that little book called "Worms and Bugs," that so many poultrymen are now interested in, must have been a born poultry raiser. It is published by the F. W. Mann Company, Milford, Mass., makers of the famous Latest Model Bone Cutter, but we would like to know the name of the writer.

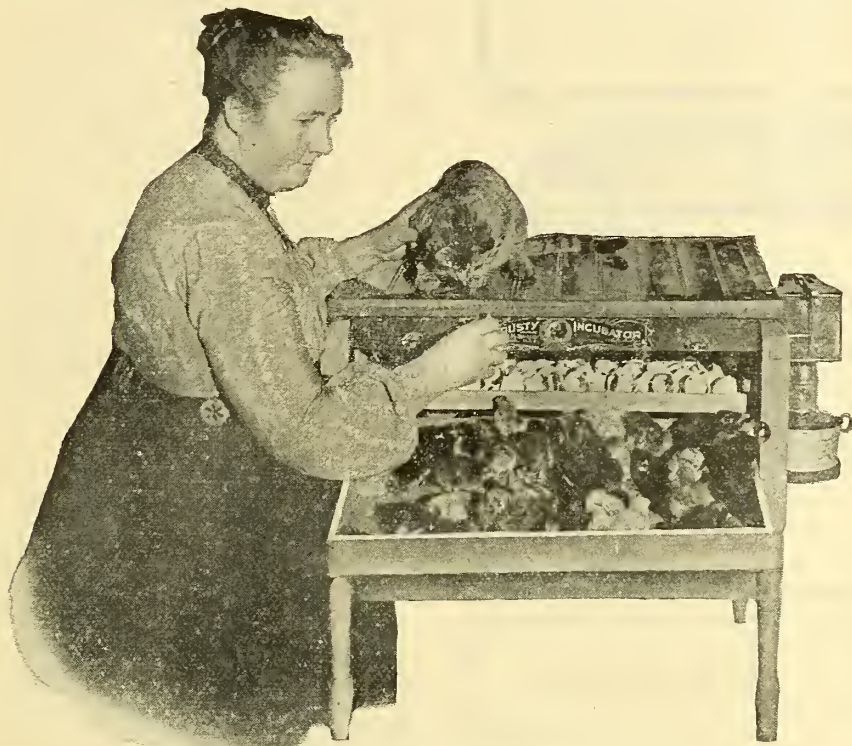

To our mind he gets right at the "meat" of success with poultry. There is an insatiable appetite in cock, hen and chick for

that will show this popular breed in their true ideal colors.

After the proof had received the severe criticism of this bunch of expert fanciers, Artist Schilling said he would be able to reproduce the desired color to perfection, and make it of the highest grade workmanship possible. Red breeders all over the United States will appreciate this color plate as heretofore there has been no established shade of Reds to guide the breeder in selecting his best birds.

The word red may be interpreted by different judges to mean any shade from a buff to mahogany, but this shows the ideal color aimed at by all breeders, and the color admired most in the show room. This picture will adorn the cover of the catalogue issued by the De Graff Poultry Farm, Amsterdam, which will be the finest illustrated poultry catalogue ever published and will sell for 25 cents each, and be of great value to any breeder of poultry. Mr. De Graff secured all first prizes offered on S. C. Reds and all specials offered. The Mohawk Valley is a veritable Little Compton for Red breeders.

R. E. Haeger & Co., Algonquin, Ill., report that they have the largest and best flock of Barred Plymouth Rocks that it has ever been their pleasure to produce, and that they have exhibition birds fit to win in any company. They also have 1,000 choice breeding birds that must be sold within the next ninety days. Write for their 34-page catalogue, which tells all about seventeen acres of Barred Plymouth Rocks. Mention American Poultry Journal.

Mrs. M. M. Johnson and her "Old Trusty" Incubator.

sides she invented the 'Old Trusty' Brooder and the best brooder, too, at that, on the face of North America.

"In the mail today I got a letter from Miss Annie Hoffarth, of Fowler, Mo. Among other things she mentioned a certain back east farm paper that put out a special incubator number. The paper was full of people's incubator experience, but she could pick out those that used the 'Old Trusty' from the way they wrote. She says: 'Those that use an "Old Trusty" and write for the papers always speak of the big hatches and the success in raising the chicks, while those that used other kinds wrote about moisture, ventilation and temperature. They sort of wrote from a prescription, so to speak, and did not get down to the real hatching and brooding question at all.' Yes, sir, that letter did me a lot of good; it separated the 'Old Trusty' way from the other way so easily and nicely that I got up and passed that letter around in the office. It illustrated something we all knew, but none of us knew how to say it like my friend Miss Hoffarth.

"I can't stop until I tell you about our 1907 'Old Trusty' catalogue. It's a book 6x12 inches, with 120 pages, besides the cover pages. It's chuck full of talk without a prescription for it. I wrote it myself and didn't compromise on anything about incubators or brooders. I have a book for you and every reader of your paper. If you don't get it, then send for it. Talk about pictures, well, sir, the book has over 200 of the handsomest photographs you ever saw.

"I'm not going to cry if you put this let-

ter, worms, grubs and bugs. Mother Nature knew what she was doing when she placed that appetite there. What does it mean?

That's the way the writer of the little book starts out. It is a matter of egg-making. Fowls are following nature's promptings and getting egg-making food. They know the things needful and they simply help themselves—that is, when they can. But what about the winter time? What of penned up hens? What should we, what must we do for hens when they can't get bugs and worms. Is there a substitute? The writer makes the most practical kind of a talk on the all-important subject of getting eggs, illustrating and proving by things every poultry raiser knows. It's the easiest, nicest kind of reading for chicken raisers. Nobody need be afraid of bumping up against big scientific terms, and yet he is being given the real philosophy of forcing hens to lay eggs. If you want to get into the secret of getting winter eggs you can procure one of these little books by writing to the Mann Company at the address given above.

Last evening was known at the show as "Rhode Island Red Night," and it would be hard to find a more enthusiastic lot of poultry cranks than the Rhode Island Red crowd that had a dinner at Hotel Stewart and then attended the show in a body.

Red breeders from all this part of the state came to see the large exhibit of Reds by Artist A. O. Schilling, of Rochester. E. T. De Graff, of Amsterdam, has been to great expense to have a color plate made

Gem Hatcheries
Latest, best. Only 30c each. This lady has used them 7 years, raising 1200 chicks yearly. Thousands doing same. Instructive booklet 5c. F. Grundy, Poultry Expert, Morrisville, Ill.

90 DAYS FREE TRIAL

Test the Merits of the Missouri Queen

and its superior heating system at your own home for 90 days and then if you are not satisfied that it is the most practical and successful hatcher, that it fulfills all the claims we make for it, you may return it to us and lose nothing by the transaction.

The Missouri Queen Incubator

THE QUEEN
OF ALL
HATCHERS

has many other superior features besides its heating system which make it such a successful hatcher of strong, healthy chicks. Its regulator is accurate and constant in its action and will not allow the temperature to vary the slightest fraction from 103°, when once adjusted. The ventilation is natural and self-regulating. In fact, throughout the whole construction of this machine we have spared no pains to make it the Queen of all hatchers. Write for descriptive catalog and free trial plan.

Waterman & Son, breeders of Buff Wyandottes, Barrington, Ill., at the exhibition of the Western Poultry Fanciers' Association, held at Cedar Rapids, Iowa, November 26-December 1, 1906, won on Buff Wyandottes, 1st cock, 1st and 2nd hen, 2nd and 4th cockerel, 1st pullet, 1st pen. Also special offered by the American Buff Wyandotte club for best shaped male and best colored female.

O. A. Bogardus, of Warsaw, Ky., won at Warsaw Poultry Club, Warsaw, Ky., November 21-24, 1906, as follows: Buff Orpingtons—1st, 2nd, 3rd cock; 1st, 2nd, 3rd, 4th hen; 1st, 2nd, 4th cockerel; 2nd, 3rd, 4th pullet; 1st pen. Black Orpingtons—1st, 2nd, 3rd, 4th cock; 1st, 2nd, 3rd, 4th hen; 1st, 2nd cockerel; 1st, 3rd, 4th pullet; 1st pen. W. C. Pierce, judge.

Prizes won by Harmon Bradshaw on S. C. White Leghorns at the Thornton, Ind., show Dec. 18-22, 1906: Cock, 1st (Bob III), 2d, scores 95%, 95%. Hen, 1st, 2nd, 3rd, scores 96%, 94%, 93%. Cockerel, 1st, 2nd, 3rd, scores 96%, 95%, 95%. Pullet, 1st, 3rd, scores 96%, 95%. First pen score, 192. Pierce, judge. Prize for highest scoring bird in show.

Ira B. Sleet, of Warsaw, Ky., won at Warsaw, Ky., November 21-24, 1906, as follows: 1st, 2nd, 3rd, 4th cockerel; 1st, 2nd, 3rd, 4th hen; 2nd, 3rd, 4th pullet; 1st, 2nd cock; 1st, 2nd pen; three specials offered by National White Wyandotte Club. W. C. Pierce, judge in White Wyandotte class.

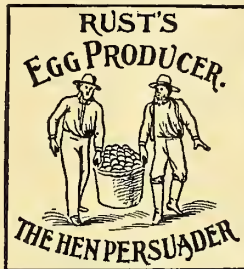

Sass Bros., of Ancona, Ill., won at Streator, Ill., December 11-14, 1906, as follows with twelve entries: 1st, 2nd, 3rd, 4th pullets; 1st, 2nd, 3rd, 4th cockerel; 1st, 2nd, 3rd hens; 1st, cock, 1st pen; \$5 gold special for 10 highest scoring birds and all specials offered by White Rock club. Geo. A. Huyl, judge.

O. L. King, Walnut Grove, Ill., the old reliable Barred Plymouth Rock breeder, reports that business is good, but says he has plenty of good birds to fill all orders. If you want something fine better write to Mr. King today and mention American Poultry Journal.

The Poultry Review, formerly published at Salem, N. Y., is now issued at Elmira, N. Y., where all correspondence should be addressed.

OF IMPORTANCE TO POULTRY RAISERS.

Every owner of fowls should send for the new illustrated booklet sent out by Wm. Rust & Sons, New Brunswick, N. J. It contains practical information of just the kind needed to make poultry keeping and stock keeping successful and profitable. It contains a list of the best sorts of fowls for laying, for setting and for table use. It tells which fowls lay white eggs and which lay dark eggs. It gives hints for egg producing, for feeding chicks, and description of gape worms; directions for preventing, detecting and curing the principal poultry

diseases, and other matters of interest to poultry and live stock keepers. The booklet will be sent free to anyone requesting it, also a very convenient and useful egg record good for one year. The little view shown herewith will be familiar to those who have noticed the Rust advertisement which will be round on another page. It is suggestive of the results obtained by feeding Rust's Egg Producer. This valuable preparation furnishes a great inducement to laying hens in the way of increased egg production, and anyone desiring to secure more eggs should try it. Ask your dealer about it. If he cannot supply you write direct to the originators and manufacturers, kindly mentioning this paper.

COMMON SENSE IN THE HENNERY.

The American hen is the greatest bird in the world. All the gold and silver mined in a year, added to the value of sheep and wool, doesn't equal the money's worth of poultry products. Biddy produces in 365 days' time. That sounds big, but it's a big fact and can't be expressed in small figures. If it's hard to believe, take the same truth in another way. Think of a railway train 900 miles long, composed of 107,818 cars. Well! If all the eggs produced on Uncle Sam's farm in one year were packed in crates containing 360 eggs each, it would take just such a train to transport them all between any two points. Now, what about our hen! Nothing small in the poultry industry, is there? No, there is not, and if every man with a hen used Dr. Hess Poultry Pan-a-ce-a, giving a small portion every day in soft food, the business would be far more colossal than it is. Pan-a-ce-a is the

keynote of success in poultry culture.

Some breeders, crusted with the barnacles of old traditions and prejudices, think hens and corn are the only two things necessary for making money out of eggs. Some, again, think there may be something in the "toxic idea," but lack sufficient faith to try it. And in the meantime, while these men are growing poorer, thousands of others, with a full knowledge of what hens require, are giving Poultry Pan-a-ce-a and coining money. Poultry Pan-a-ce-a is not a stimulant. It doesn't force the hen to a short period of large production, only to leave her exhausted and unproductive for a much longer time.

Poultry Pan-a-ce-a gets at the root of the trouble in another way. It makes the hen feel natural when her whole environment is contrary to nature. If at liberty to scratch and forage at will, she would find in Nature's lavish providing most of the things she needs to promote the healthful activity of every organ. But, being restricted in range, she needs Poultry Pan-a-ce-a to take the place of Nature's providing by making food available, and by strengthening and assisting the digestive process till the largest possible amount of nutrition which nature can use is wrung from the food eaten, and directed into proper channels for building healthy flesh or producing eggs. This statement of fact is not overdrawn—hens cannot lay when confined or at liberty, if forced beyond a certain point—unless a preparation of this kind is given.

The truth of all this is sufficiently evident in the number of deserted and abandoned "coops" one sees about the country, where people have literally killed the hen which laid the golden egg by requiring the impossible and unreasonable. Dr. Hess and Clark (who make Poultry Pan-a-ce-a) are so well assured of the real value of the compound, that they back it with their personal guarantee—no profit from using Pan-a-ce-a—no pay. If you try it and are disappointed, you get your money back, that is their offer.

Very likely your dealer has Dr. Hess Poultry Pan-a-ce-a; if not a postal order will bring it. Thousands more are using it this year than ever before. Try it yourself—get in line for prosperity.

WOODWORK PRICES REDUCED.

How Gordon, Van Tine & Co., of Davenport, Ia., Sell Better Materials at One-Half Retailers' Prices.

Here is an illustration how Gordon, Van Tine & Co., who operate the biggest woodwork, sash, door and general mill work factory in the country, cut prices in two for the consumer.

In the first place, they sell direct from their factory to the individual user, or contractor, or builder. To get an idea of the size of their equipment, you must know that they run the cars right into the shipping department. In fact, they can load 12 cars at a time in their shipping room. They load these 12 cars from both sides of the

car at one time—sometimes as many as 30 men doing nothing but trucking carefully packed building material into outgoing cars.

Compared with this system just look how sash, doors and woodwork is generally sold. Take, for instance, a four-paneled door of high quality; the dealer's price is \$2—the retailer pays his jobber \$1.15 for this door—the jobber pays the average maker 87c for it. Gordon, Van Tine & Co. sell direct from their immense factory the same door for 80c. In other words, they sell a door of warranted quality fine White Pine to the consumer for less than the jobber pays the average small maker for it. You save therefore the jobber's profit of 28c and the retailer's profit of 85c, besides the difference between Gordon, Van Tine's low factory price and that of the average factory, a total difference of \$1.20.

Now, this factory is located in Davenport, Iowa,—almost the center of the United States—and shipments are made to every city in the Union, safe delivery guaranteed. Every item in their immense free catalogue is as great a bargain for the very same reason as the door just mentioned, and remember that better quality goods are not made or sold by anybody.

This is why this concern can sell its immense output, the products of its own timber lands, its own logging camps, its own saw mills and its own factories direct to the consumer on orders made up from the catalogue and sent in by mail. If you are going to do any repair work or any building this spring, now is the time to get this catalogue of low prices and modern styles. Mention this paper and you will get prompt attention and the best treatment. Address Gordon, Van Tine & Co., Station B92, Davenport, Iowa.

We hear much about artificial incubation and the many appliances to bring about results. If, however, the theories of Prof. J. F. Siems, of Columbus, Neb., the eminent German poultry expert, are true, people are wasting large sums of money in buying incubators with their artificial heating systems. Hot air and hot water alike are unnecessary, according to him. "Back to nature" is his cry to poultry raisers, and the demonstration he is giving with his Natural Hen Incubator is being duplicated by thousands of others who are following his teachings. The heat of the hen is sufficient, he says, and accordingly he discards all other heating and ventilating devices. But he gets results nevertheless and hatches strong limbed, vigorous chicks. Mother instinct is another thing of Professor Siems and developing this, he argues, means hens that are better layers the year round. The proposition is certainly an attractive one in theory and the fact that a 200-egg size Natural Hen Incubator costs but \$3 will undoubtedly lead a large number of poultry raisers who have had but indifferent results from other incubators to try his plan.

Clement & Fike, Libertyville, Ill., the noted White Wyandotte breeders, have just issued their annual egg circular which they are mailing free to all who ask for it. If you want to improve your flock of White Wyandottes write them for their prices and mention American Poultry Journal.

The 1907 Ranney — Use It For Three Hatches

and if it does not give perfect, complete satisfaction in every respect, send it back at our expense and we will willingly and promptly return your money.

That is the only fair way to you. You must be satisfied, or *we* are not satisfied. We can afford to place the

Ranney Incubator

with you on these liberal terms because of its wonderful *goodness*—its reliability. In the years we have been making them only one has ever been returned to us and that through no fault of its own—a remarkable record.

Hatches equally well in any locality, any climate, any altitude, because it is the only machine having the Adjustable Ventilator—a small simple device at the fresh air inlet that perfectly controls the fresh air and moisture under *any and all* atmospheric conditions, without obstructing the out-flow of foul air.

Our Rebate Door (built like a refrigerator door) never swells and sticks nor shrinks and gaps; always air proof. Fresh air inlet is at bottom of case, well away from lamp—no fumes of oil or overheated air. The Ranney radiates heat downward on the eggs, just like the mother hen. Handsome mahogany finish case, and so strong that it will last for years. As simple to operate as it is sure in results.

Your Name Will Get \$2 Eggs
For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the world. I keep 2000 of the celebrated Chamberlain laying strain on my Experimental Farm, and to increase the sale of my Perfect Chick Feed, I will send to any one who will send me their name so I can send them my Perfect Chick Feed Catalogue, 2 sittings of Single Comb Brown or White Leghorn Eggs for \$1 for the 2 sittings. Only 2 sittings sold to one person. White or Barred Plymouth Rock, or White or Silver Laced Wyandotte Eggs \$1 per sitting. This is a rare chance to get a start of extra fine stock. Send money and have your orders booked at once. W. F. CHAMBERLAIN, (The Perfect Chick Feed Man) KIRKWOOD, MO.

POULTRY SHOW DATES FOR 1907.

[We would be pleased to have the Secretaries of poultry shows notify us of any errors or changes in the following list, as it is our desire to make this as near correct as possible.]

- Jan. 3-7—Albert Lea, Minn. D. E. Hale, Judge; R. B. Thompson, Secretary.
Jan. 3-10—Lenox, Mass. L. H. Peters, secretary.
Jan. 4-9—Detroit, Mich. Tucker, Schwab, Butterfield, Judges; T. F. Millsbaugh, Secretary.
Jan. 6-11—Bradford, Pa. E. L. Jones, secretary.
Jan. 6-11—Polo, Ill. Shellabarger, Judge; J. A. Davison, Secretary.
Jan. 7-10—Brantford, Ont., Can. James L. McCormack, Secretary.
Jan. 7-11—Aurora, Ill. Heck, Judge; John R. Meredith, Secretary, North Aurora, Ill.
Jan. 7-12—Wichita, Kan. Heimlich, Shaner, Atherton, Judges; Thos. Owen, Secretary, Topeka, Kan.
Jan. 7-12—Dauville, Ill. McCord, Myers, Judges; C. S. Johnson, Secretary.
Jan. 7-12—Denver, Colo. Russell, Rhodes, Judges; Fred H. Hunt, Secretary, 4139 Stuart St.
Jan. 7-12—Auburn, N. Y. Orr, Rigg, Trafford, Cash, Sites, Denney, Quilhot, Riddell, King, Jaquin, Gardner, Judges; J. H. Scott, Secretary.
Jan. 7-12—Evansville, Ind. Johnston and Ewald, judges; H. J. Reimer, secretary, 113 Heinlein avenue.
Jan. 7-12—Franklin, Tenn. T. M. Campbell, judge; E. C. Truett, secretary.
Jan. 7-12—Normal, Ill. Pierce, McClave, Tucker, Fite, Heyl, judges; A. L. Moore, secretary.
Jan. 7-12—Los Angeles, Cal. W. W. Browning, Henry Berran, S. Tyler, C. L. Hogue, Frank H. Thomas, judges; H. W. Kruckeberg, secretary, 123 S. Los Angeles street.
Jan. 7-12—Columbia, Mo. E. C. Branch, Judge; J. E. Peeler, Secretary.
Jan. 7-13—Macomb, Ill. Ira H. Sheets, President.
Jan. 7-13—Sharon, Pa. H. A. Emmel and A. F. Kummel, judges; C. H. Gauchat, secretary.
Jan. 7-13—Sedalia, Mo. J. W. Wale, judge; L. H. Archias, secretary.
Jan. 7-13—Oakland, Cal. Dixon and Venn, Judges; C. G. Hinds, Secretary, Alameda, Cal.
Jan. 8-10—Barre, Vt. May and Ballou, judges; James E. Mitchell, secretary.
Jan. 8-10—Lenox, Mass. Nichols, Shaylor, Judges; L. H. Peters, Secretary.
Jan. 8-11—Dallas, Tex. F. J. Marshall, S. B. Lane, Judges; Elbert Beaman, Secretary.
Jan. 8-11—Lake Geneva, Wis. D. E. Hale, Judge; F. M. Higgins, Secretary.
Jan. 8-11—Ames, Ia. O. J. Easton and Mills, Judges; Fr. N. Fowls, Secretary.
Jan. 8-11—Middletown, Conn. Graves and Bunnell, judges; Arthur L. Clark, secretary.
Jan. 8-11—Monroe, N. C. G. A. Brown and George W. Means, judges; T. P. Dillon, secretary.
Jan. 8-11—Peterboro, N. H. W. H. Spaulding, secretary.
Jan. 8-11—Springfield, Mass. Col. R. J. Hamilton, Secretary, P. O. Box 566.
Jan. 8-11—Edon, Ohio. Phil. Feil, Judge; John Gearhart, Secretary.
Jan. 8-11—Middletown, Ohio. Keller, Judge; Clarence Dodds, Secretary.
Jan. 8-12—Zanesville, Ohio. Ben S. Myers, judge; William E. Thomas, secretary.
Jan. 8-12—Sidney, Ohio. Cram and Gault, judges; Earl Lee, secretary.
Jan. 8-12—Blue Island, Ill. Lambert and McCauley, judges; Harry Neath, secretary, Chicago Heights, Ill.
Jan. 8-12—Enid, Okla. C. A. Emry, judge; Fred Roy Ziller, secretary.
Jan. 8-12—Monmouth, Ill. G. D. McClaskey, judge; S. L. Hamilton, secretary.
Jan. 8-12—Sharon, Pa. H. A. Emmel, judge; John S. Leslie, secretary.
Jan. 8-12—Washington C. H., Ohio. J. A. Bush, secretary.
Jan. 8-12—Naperville, Ill. B. H. Myers, secretary.
Jan. 8-13—Seattle, Wash. George D. Holden, judge; W. Anderson, secretary.
Jan. 8-13—St. Louis, Mo. Sharpe Butterfield, Judge; Henry Steumesch, Secretary.
Jan. 8-13—Findlay, Ohio. Ben Myers, Judge; Dr. F. R. Mann, Secretary.
Jan. 8-15—Montpelier, Ind. S. B. Johnston, judge; L. L. Howard, secretary.
Jan. 9-12—Cresco, Iowa. U. J. Shanklin, judge; Fred Salisbury, secretary.
Jan. 9-12—Tiffin, Ohio. Charles McClave, judge; V. Crabtree, secretary.
Jan. 9-12—Sharon, Pa. H. A. Emmel, A. F. Kummer, Judges; C. H. Gauchat, Secretary, 24 Hazel Street.
Jan. 9-12—St. Louis, Mich. W. E. Hain, Secretary.
Jan. 9-13—Chilton, Wis. Frank Heck, judge; A. Stansky, secretary.
Jan. 9-14—Painesville, Ohio. Lambert, judge; A. H. Ayer, secretary.
Jan. 9-14—Elwood, Ind. J. C. Long, judge; Charles R. Wilson, secretary.
Jan. 9-15—Detroit, Mich. Oke, Schwab, Butterfield, judges; T. F. Millsbaugh, secretary.
Jan. 10-12—Belle Fourche, S. D. W. G. Warnock, judge; J. H. Pearson, secretary.
Jan. 11-15—Allegan, Mich. Sites, Judge; W. H. Warner, Jr., Secretary.
Jan. 11-16—LaCrosse, Wis. Tucker, Judge; E. H. Hoffman, secretary.
Jan. 14-17—Utica, N. Y. C. R. Coppel, secretary.
Jan. 14-18—Port Huron, Mich. McClave, Traviss, Lynn, George Asman, judges; Robert S. Taylor, secretary.
Jan. 14-18—Siloam Springs, Ark. H. Elmer Spencer, secretary.
Jan. 14-19—Charlotte, N. C. George O. Brown, judge; W. B. Alexander, secretary.
Jan. 14-19—Cleveland, Ohio. Rigg, McClave, Sites, Orr, judges; F. L. Gruehl, secretary, 9902 Woodland avenue, S. E.
Jan. 14-19—Lincoln, Neb. Russell, Rhodes, Shellabarger, judges; L. P. Ludden, secretary.
Jan. 14-19—Nashville, Tenn. Denny, Marshall, C. N. Hausen, judges; John A. Murkin, Jr., secretary.
Jan. 14-19—Scranton, Pa. Drevenstedt, Pierce, Stanton, judges; A. W. Close, secretary.
Jan. 14-19—Fort Branch, Ind. O. P. Greer, Judge; Frauk L. Riffert, Secretary, Haubstadt, Ind.
Jan. 14-19—Gosport, Ind. N. D. Lingle, Secretary.
Jan. 14-19—Blackwell, Okla. M. S. Fite, Judge; George M. Carson, Secretary.
Jan. 14-19—Colorado Springs, Colo. D. T. Heimlich, Judge; G. W. Veditz, Secretary.
Jan. 14-19—Dubuque, Ia. D. J. Lambert, Judge; W. Bullen, Secretary.

KELLER'S WYANDOTTES GOLDENS, SILVERS AND WHITES

1000 head of the finest birds I ever offered at reasonable prices. If you wish either fine show birds or high grade breeding birds I can supply you. Our birds have won thousands of premiums in the largest shows of America, and more than 200 regular prizes at Madison Square Garden, N. Y. If you wish the best no one is better prepared to supply you in any numbers to suit you. I export more Wyandottes than any other breeder. Also Scotch Collie dogs of the finest. Large circular finely illustrated free.

IRA G. KELLER, Brookside Stock Farm, Box 75, Prospect, O.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** is furnished every advertiser during the time his ad is running. **Sixty thousand per month.** We guarantee an average monthly circulation of 60,000 copies of **AMERICAN POULTRY JOURNAL.** When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention **A. P. J.** It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

Rural Route 29 - - St. Louis, Missouri

The Full Nest Pays Best**No. 4 Midland Poultry Food Helps Hens Keep Nests Full**

The poultry keeper who feeds Midland No. 4 always gathers lots of eggs. It's a scientific ration prepared on purpose to make eggs. And it does it. It does one thing more, it puts fowls in fine plumage—helps them through the moult, and gets the hens to laying early. When you want eggs, the easy way to get them is to help your hens. Don't give them a haphazard mixture that you don't know anything about, then expect eggs in return. Hens require certain materials from which to make eggs. We include every one of them in Midland No. 4, and save you the trouble of mixing it. We prepare it so that the proportions are always scientifically correct—so that every time you buy a sack you know exactly what you are getting and just

what it will do—the formula never varies. And remember that No. 4 is a food—hens live and thrive on it, and lay eggs because it furnishes the things eggs are made of. That is why the largest poultry-raisers and egg-producers in the country buy it by the car load, year after year. It pays them—it will pay you too, no matter how many hens you may have—10 or 10,000. We have other foods for fattening fowls, for ducks, geese, turkeys—we'd like to tell you about all of them. Our free books, "The Science of Poultry Feeding" and "Poultry Fattening Perfected" ought to be in the hands of every person who raises poultry, whether for pleasure or profit. We'll send them to you free, and tell you how, why and where to buy Midland Foods. Write today.

White Wyandottes

MAPLESIDE STRAIN

If I can make one entry at Madison Square Garden, New York City, N. Y., and win first hen in a class of 51, and one entry at Boston and win 5th hen in a class of 40, together with four 1sts on four entries at Dover, N. J., don't you think I am competent of selecting birds that can win at your shows, or sell you breeders that will produce prize winning specimen? Drop me a letter stating just what you want. I am at your service with 12 years' experience, and have produced one of the best strains of Wyandottes on earth. Booklet, etc., free.

Box 202, WASHINGTON, NEW JERSEY

Dirk's Buff Wyandottes

At Youngstown, Ohio, Dec. 4th to 7th, we won State Cup offered by American Buff Wyandotte Club for best cock, cockerel, hen and pullet. Silk banner for best display. We won all prizes on cockerels, and specials for best colored and shaped male. More prizes and specials than all our competitors combined. This in connection with our winnings at Toledo and North Baltimore last winter proves that we have the quality. A few good breeding cockerels yet for sale. Am now hooking egg orders for spring delivery.

:

MACON, ILLINOIS

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per setting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG

IOWA FALLS, IOWA

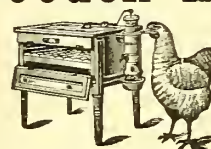

**START
A BUSINESS
OF
YOUR OWN**

With \$12.80

for a starter, you can soon build up a lucrative business or start a profitable side line. Hundreds have done it and are doing it. The Wooden Hen is the simplest and most wonderful incubator on the market. The 200-egg size costs but \$12.80, and positively will hatch a chick from every fertile egg.

**The
Wooden Hen**

is the cheapest and best hatcher made. It is especially adapted for starting in a small way to raise chickens. The supply is never up to the demand for broilers, and a 200-egg size Wooden Hen will turn out a hundred dollars' worth at a time, requiring only two months to reach the broiler stage. Send for our handsome new catalogue showing views in natural colors.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

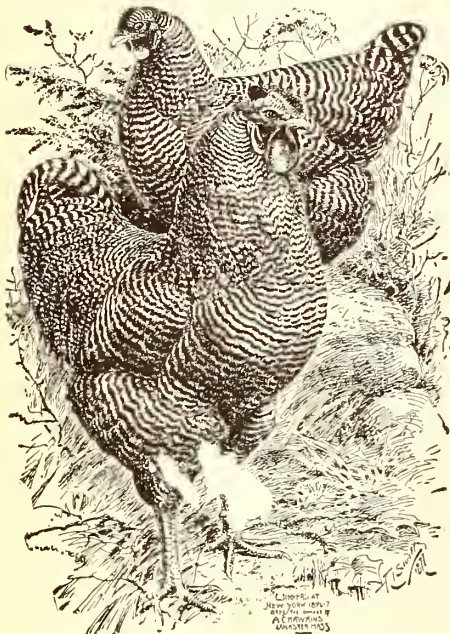

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

MRS. U. R. FISHEL'S Bronze Turkeys

are better this season than ever before. I have something like 300 choice breeders and exhibition birds to sell. These are all farm reared, strong, vigorous birds.

AT TENN. STATE FAIR, 1906

I showed four old turkeys, winning first prize old tom and first prize hen.

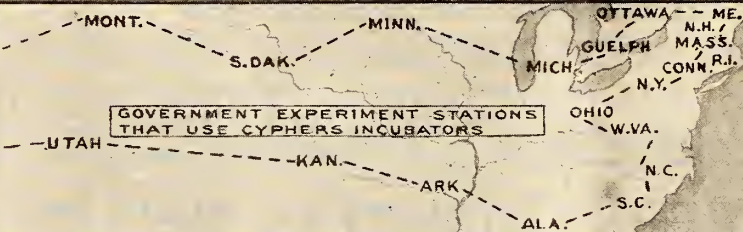

AT IND. STATE FAIR, 1906

I won every first prize offered on Bronze turkeys. At Chicago, Madison Square Garden, New York, Great St. Louis World's Fair, Cincinnati, Indianapolis, etc., my turkeys have won the majority of the prizes. If you want the best, write. Enclose stamp please. Eggs \$5 per 11

MRS. U. R. FISHEL, Box A, Hope, Ind.

THE WORLD'S BEST HATCHERS

RECOMMENDED
AND USED BY
GOVERNMENT
EXPERIMENT
STATIONS

THROUGHOUT UNITED STATES AND CANADA

CYPHERS Non-Moisture, Self-Ventilating, Self-Regulating INCUBATORS AND BROODERS

are in Successful Use on More Government Experiment Stations in the United States, Canada and other countries than all other makes of Incubators and Brooders Combined.

No Higher or More Reliable Recommendation Could Be Obtained Than the Following Reports from Government Experiment Station Experts—Men of Scientific Training, and Perfectly Disinterested in Cyphers Incubators except that they Use them in their Scientific Work and Experiments, **Because They Have Found Them To Be The Best.** These Reports Prove That Cyphers Incubators are Practically Automatic, Simple of Operation; Require No Supplied Moisture, and are Absolutely Self-Regulating and Self-Ventilating.

What Scientific Experts Say This Answers The Question — “Which Incubator Shall I Buy”

HATCH EXPERIMENT STATION.

Amherst, Mass.

Cyphers Incubator Co., Buffalo, N. Y.

We find your incubators give better hatches than any others we have ever tried. They are simple and easy to operate. Three 220-egg machines have been in use by students in the College, none of whom had ever before had any experience in running an incubator. Beginners have repeatedly secured excellent hatches with your machines.

Wm. P. Barber
Prof. of Agriculture.

UNIVERSITY OF MAINE.

Orono, Me.

Cyphers Incubator Co., Buffalo, N. Y.

We began using our first Cyphers Incubator six years ago and now have 8, 360-egg size. These machines do all you claim for them, and with a very small amount of care and labor. No one can ask for a machine that is more easily handled, or for one that will give better results. Having had considerable experience with incubators I regard the Cyphers as the best of any I have used.

W. M. Gould
Dept. of Animal Industry.

OHIO STATE UNIVERSITY.

Columbus, Ohio.

Cyphers Incubator Co., Buffalo, N. Y.

I think it almost impossible to make a machine that will keep a more uniform temperature, and that is what is wanted in hatching. I write this after using your No. 2 incubator for more than one year. It has given us good results.

Frank Puklin
Asst. in Agriculture.

CORNELL UNIVERSITY.

Ithaca, N. Y.

Cyphers Incubator Co., Buffalo, N. Y.

The Standard Cyphers Incubator came promptly. I am delighted with the way it behaves. It is a positive pleasure to handle an incubator that regulates so easily and accurately, and that, like David Harum's horse, "will stand without hitching." Because of its reliability we are using it largely for investigation work.

Samuel H. Rice
Asst. Prof. of Husbandry.

MONTANA EXPERIMENT STATION.

Bozeman, Mont.

Cyphers Incubator Co., Buffalo, N. Y.

Cyphers Incubators have been used by us for five or six years and we have found them to work satisfactorily without the introduction of moisture. In the matter of ventilation they require no extra care beyond that provided for by the manufacturers. The control of temperature may be said to be as near perfect as human skill combined with limited expense can provide. I believe they fully come up to the claims of the manufacturers.

E. B. Linfill
Director.

RHODE ISLAND COLLEGE OF AGRICULTURE.

Kingston, R. I.

Cyphers Incubator Co., Buffalo, N. Y.

I am pleased to state that your machines are the most popular ones with this department. To quote our Mr. Kirkpatrick's own words, "We certainly like them or we would not have all of our incubators of that make."

J. Willard Bolte
Asst. Professor.

NORTH CAROLINA COLLEGE OF AGRICULTURE.

West Raleigh, N. C.

Cyphers Incubator Co., Buffalo, N. Y.

We continue to have first-class results from your machines, and are always glad to recommend them especially to beginners on account of the ease with which they can be operated. I have never used any moisture in any of your machines and have had good hatches with them under widely varying conditions. Have found that the regulator looks after the temperature even when we have had a variation of 20 degrees in twelve hours in the temperature of the room.

J. H. Jeffery
Poultryman.

WEST VIRGINIA EXPERIMENT STATION.

Morgantown, W. Va.

Cyphers Incubator Co., Buffalo, N. Y.

The new-pattern Cyphers Incubator has been used here this season entirely by students who were totally inexperienced in the operation of incubators. All of the different hatches have been satisfactory, averaging about 85 per cent. I have used Cyphers Incubators several years. Each season we have raised 1,000 or more chickens and in this work we use by preference the Cyphers because it is so simple, so accurate and so reliable. I have found the Cyphers to be a non-moisture, self-ventilating machine, and have no hesitation in recommending it to all who wish to purchase a high-grade incubator. The chick drawers in your new style machines are a very decided improvement.

Harvey Atwood
Asst. Agriculturist.

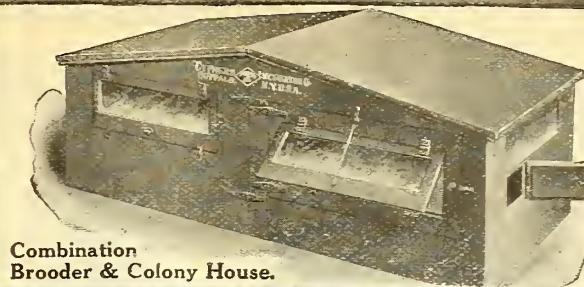

DOMINION OF CANADA EXPERIMENTAL FARM.

Ottawa, Canada.

Cyphers Incubator Co., Buffalo, N. Y.

Our experience with your standard Incubator has been most satisfactory for the following reasons: (1) Ease of operation; (2) Accessibility to all parts; (3) Regularity with which the correct temperature is kept; (4) Convenient arrangement of thermometer, trays, drawers for chicks to fall into, and lamp. These features are important, particularly to the amateur. Perhaps the most important improvement is the admirable system of ventilation. This all-important feature is frequently lost sight of in many machines on the market.

A. G. GILBERT,
Poultry Manager.

Combination
Brooder & Colony House.

UNIVERSITY OF MINNESOTA.

Crookston, Minn.

Cyphers Incubator Co., Buffalo, N. Y.

Your improved type Standard Incubators have given us uniformly satisfactory results throughout the past season. The best lot of chicks hatched by us came from the first hatch taken from the Cyphers operated in competition with five other machines representing three different makes. We operated each kind of incubator one to three times.

Sam Watson
Poultryman

AGRICULTURAL COLLEGE OF UTAH.

Logan, Utah.

Cyphers Incubator Co., Buffalo, N. Y.

I have used Cyphers incubators for a number of years at this Station, and can honestly say that I know of no better machine.

James Dryden
Poultryman.

SOUTH CAROLINA EXPERIMENT STATION.

Clemson College, S. C.

Cyphers Incubator Co., Buffalo, N. Y.

I am delighted with the Cyphers Incubator obtained from you. Your machine is everything you claim for it. No moisture is required and I am particularly pleased with the regulator; it is not only accurate but strong and durable. I do not hesitate to recommend it to anyone wishing to purchase an incubator.

Lucius M. Watson
Poultryman.

SOUTH DAKOTA EXPERIMENT STATION.

Brookings, S. D.

Cyphers Incubator Co., Buffalo, N. Y.

The Cyphers is, in fact, a non-moisture incubator, giving satisfaction even in our dry climate. From February to July we averaged 85 per cent of all fertile eggs incubated. So perfect is the regulator that during an entire hatch the thermometer varies less than one degree. I most heartily recommend the Cyphers to anyone desiring first-class incubators.

O. B. Saunders
Chief of Poultry Dept.

CONNECTICUT AGRICULTURAL COLLEGE.

Storrs, Conn.

Cyphers Incubator Co., Buffalo, N. Y.

Your incubators have been in use here since 1897, and I have found them simple for the students to handle and at the same time reliable. The regulator can be depended upon at all times and I have had good hatches when the room in which they were working was below freezing, as well as when it was from 75 to 80 degrees above zero. I consider one of the strongest points of your machines is their ease of operation. Satisfactory results are usually obtained upon the first trial.

C. K. GRAHAM,
Asst. Prof. of Poultry Culture.

For Reports From Other States See Our Main Catalogue

Write For Free Illustrated Catalogue of 260 pages, entitled "How to Make Money With Poultry and Incubators." It's a big one. We pay postage. It contains six of the most valuable chapters ever published on Poultry. Chap. I.—Magnitude of the Poultry and Egg Industry; Chap. II.—Review of Our Great Poultry Markets; Chap. III.—Profit-Making Broilers, Roasters and Capons; Chap. IV.—The Profitable Pekin Market Duck; Chap. V.—Successful Chick Rearing; Chap. VI.—Profitable Egg Farming. These People Make Poultry Pay

Mrs. J. Dietzman

G. L. Morlock

L. L. Carpenter

R. M. White

Russell, Ala., Mar. 29, 1906.
My first hatch in the 120-egg Racine incubator was 79 chicks—95 eggs; second, 100 chicks—108 eggs.

R. M. WHITE.

Hillsboro, Wis., Feb. 9, 1906.
My first hatch this season in the 225-egg Racine incubator was 198 chicks, and I raised them in the Racine brooder. I now want another outfit just like it.

MRS. J. DIETZMAN.

Sheffield, Pa., July 17, 1906.
I got 84 fine, strong chicks from 86 fertile eggs in my 120-egg incubator, first trial. All the chicks are very much alive at this writing.

G. L. MORLOCK.

McKaig, Md., Feb. 1, 1906.
Took off my first hatch January 17th in the 120-egg Racine incubator and got a 90 per cent hatch. Chicks are doing fine in the brooder. Regulator works like a charm. I selected the Racine machines after a careful reading of nine different catalogues, and am more than pleased with my choice. Am running another well known make of incubator, but the Racine is as far ahead of it as an automobile is ahead of a wheelbarrow.

L. L. CARPENTER.

Sparta, Wis., July 2, 1906.
I have had five hatches in my 120-egg Racine incubator this Spring—first 104 chicks, second 110, third 108, fourth 113, fifth 110, or 545 chicks from 620 eggs set. The best of all. I have raised nearly all of them in the 200-chick Racine brooder.

MRS. J. A. PAUL.

Sprakers, N. Y., Jan. 8, 1906.
In my first three hatches in the 225-egg Racine incubator I got 94 per cent, 96 per cent and 95 per cent hatches. The Racine machines are all you claim for them.

GUY W. RICKARD.

Watertown, Wis., Jan. 30, 1906.
My six hatches in the Racine 120-egg incubator were 68 chicks, 81 chicks, 93 chicks, 73 chicks, 105 chicks and 98 chicks. It beat every other make of incubator in this neighborhood.

JULIUS WILKE.

Alexandria, Minn., Jan. 31, 1906.
My first hatch in the 225-egg Racine incubator was 87 per cent. I am more than pleased with both the Racine incubator and brooder.

ALFRED A. SWAREN.

Loose Creek, Mo., May 16, 1906.
My first hatch in the 225-egg Racine incubator was 125 chicks; the second, 195 chicks. They are all healthy and grow fine.

MRS. CHAS. LOCK, SR.

Kansasville, Wis., Feb. 21, 1906.
I have been using one of your 225-egg Racine incubators some years, and last year hatched 1371 fine chicks in it.

ELLA L. CHOAK.

Kankakee, Ill., Mar. 22, 1906.
My last hatch in the 225-egg Racine incubator came off with 182 fine chicks. I have had remarkable success with this incubator for the past two years.

MRS. L. SHIMMIN.

Louisville, Ohio, May 9, 1906.
My first hatch in the 225-egg Racine incubator was 80 per cent strong chicks—not a cripple in the lot. The chicks grow rapidly in the brooder.

J. H. MILLER.

Hermansville, Mich., May 21, 1906.
I bought a 120-egg Racine incubator from a neighbor, and in my first hatch I got 94 fine chicks from 109 eggs.

MRS. EMILE LACASSE.

Caldwell, Kans., Dec. 5, 1906.
I am well satisfied with my 225-egg incubator and brooder. From 800 eggs, 129 chicks hatched, and I raised nearly all of them. I never will go back to the old way of hatching chicks.

JERRY LEHEDA.

Mrs. J. A. Paul

Guy W. Rickard

You Can Make Poultry Pay

First of all, get our remarkable, fascinating, capable book about incubators. It is the best book of the kind ever written, and we send it free. It is written for those who want to know all about incubators and what kind is best, and why, and it is written by the man who knows most about incubators. It tells all that an incubator should be, and why.

The writer of this book has spent 25 years making incubators. He has spent the best part of his life in perfecting them.

He is a poultry raiser, too; and he has experimented in his hatchery with every good incubator made. He has made hundreds of tests in a way that counts. The book tells you the results of all sorts of experiments.

The ordinary incubator catalogue is a rather dull affair. Claims are made without the reasons for them. The next catalogue you read disputes those claims, and makes others. You know less what you want than you did when you started.

Our Incubator Book deals with the subject broadly. It tells what features are good, and why. It tells what features are wrong, and gives reasons. The man who reads it learns as much about incubators as the man who wrote it knows.

And it is all told so briefly, so clearly, so interestingly that the book is fascinating.

The book is issued, of course, to sell Racine Incubators and Brooders. The writer of the book is the man who makes them. The book is our catalogue, too.

But the book isn't biased. It deals with the subject fairly. It does not denounce other makers. It

is written with the thought that when you see how much this man knows about incubators you will want the machine which he makes.

We have learned that when a man knows as much about incubators as he should know before buying, he invariably selects the Racine. Our sole object is to tell you the facts, and to so tell them that you will know them as facts.

We are willing then to abide by your judgment.

The Racine Incubators and Brooders are the final results of this man's 25 years of invention. They embrace all that his experiments have proved to be best. They avoid all that he has found to be wrong. We want you to read what this man says about incubators, and then judge if you want him to make one for you.

The Racine—despite its perfection—sells for less than any other good incubator. The reason lies in our factory facilities, and the immense number we make. It is sold on approval, and our guarantee is backed by more capital than is behind any other incubator concern in America.

Let the book tell you the rest.

Permit us to urge in your interest that you send for this book. No matter how many other incubator catalogues you get, by all means get this one, too. You will find it worth more to you—in a practical way—than all the others combined.

Without it you may make a costly mistake and not know it. With it you will know too much to go wrong.

But first get the book. Send no money for it—not even a stamp. It is free to you. Just send a postal card, but send it today.

LOOK FOR
THE
FLAG

When you buy a thermometer. No matter what kind of an incubator you have, to get the largest possible hatch, the eggs must be kept at the right temperature 103°. An absolutely accurate thermometer is vital. They won't stay accurate unless seasoned, which adds considerably to the cost.

Taylor Thermometers

are as accurate as thorough seasoning and careful testing and re-testing can make them. The white graduation on the black frame makes reading easy even in a dim light. An arrow emphasizes the 103°. Send 75c. for a Taylor Incubator Thermometer (prepaid). The saving on fertile eggs will pay for it over and over.

Taylor Brothers Company.

Put Feathers On Your Eggs

That's the way the old Mother Hen does, and it's Nature's own way, too. The hen knows more about hatching eggs than you do, if you use one of those artificial heated boxes with smoky, stuffy lamps. Such contraptions cost lots of money in the first place and don't give you satisfactory results in the second place. Let us add, in the third place, that there is only one absolutely correct method. We have it in the

J. F. SIEMS,
German Poultry Scientist.
Patentee Natural Hen Incubator.

Natural Hen Incubator

Two Hundred egg size \$3.00. Hen instinct controls the whole process from beginning to end of hatch. No moisture or lamp or regulating attachment to give trouble and failure. Thousands are discarding their hot and hot water failures for our system. Send today and make success sure. Agents Wanted. Catalog FREE.

NATURAL HEN INCUBATOR COMPANY,
B- 4, Columbus, Nebraska.

The Full Nest Pays Best

No. 4 Midland Poultry Food Helps Hens Keep Nests Full

The poultry keeper who feeds Midland No. 4 always gathers lots of eggs. It's a scientific ration prepared on purpose to make eggs. And it does it. It does one thing more, it puts fowls in fine plumage—helps them through the moult, and gets the hens to laying early. C. When you want eggs, the easy way to get them is to help your hens. Don't give them a haphazard mixture that you don't know anything about, then expect eggs in return. Hens require certain materials from which to make eggs. We include every one of them in Midland No. 4, and save you the trouble of mixing it. We prepare it so that the proportions are always scientifically correct—so that every time you buy a sack you know exactly what you are getting and just

what it will do—the formula never varies. And remember that No. 4 is a food—hens live and thrive on it, and lay eggs because it furnishes the things eggs are made of. That is why the largest poultry-raisers and egg-producers in the country buy it by the car load, year after year. It pays them—it will pay you too, no matter how many hens you may have—10 or 10,000. C. We have other foods for fattening fowls, for ducks, geese, turkeys—we'd like to tell you about all of them. Our free books, "The Science of Poultry Feeding" and "Poultry Fattening Perfected" ought to be in the hands of every person who raises poultry, whether for pleasure or profit. We'll send them to you free, and tell you how, why and where to buy Midland Foods. Write today.

RING'S LATEST AND BEST IN WHITE PLY. ROCKS

"Hendryx," score 96 $\frac{1}{4}$, was hatched March 15, 1906, from eggs bought of Ring. This is the highest score ever given to a White Rock ckl. in competition. "Hendryx" is no accident, but the result of careful breeding through generations of Chicago and Detroit winners, my records at these shows being unequaled, including 21 first prizes. First class show birds, breeding and utility stock. Some great bargains in W. Wyandottes to close them out. Ring's customers get their money's worth. Send for free catalog.

CHAS. H. RING : R. F. D., DECATUR, MICH.

First Prize Cock at Madison Square Garden, 1904. Bred and owned by Gardner & Dunning.

GARDNER & DUNNING'S BARRED PLY. ROCKS

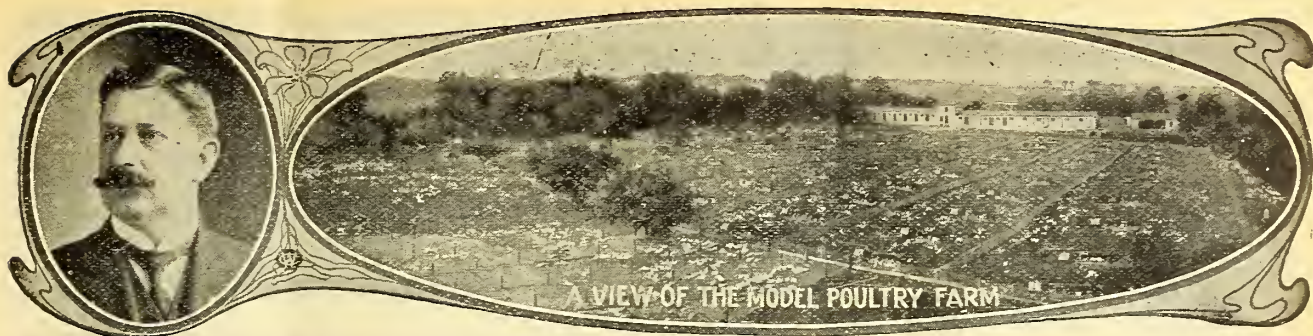

AT MADISON SQUARE GARDEN, January, 1906, in the largest and most magnificent class of Barred Plymouth Rocks ever seen in any show room in America, we won twice as many regular cash prizes as any other exhibitor. In this unparalleled competition, with every prominent Eastern breeder exhibiting, we won 26 points; our nearest competitor but 14. Our winnings were as follows: Cocks, 4, 6, 8 in a class of 46; Hens, 1, 2 in a class of 60; Ckls, 2, 3 in a class of 106; Pullets, 2, 8 in a class of 87; Pen, 3 in a class of 35; special for best shaped female; the American Ply. Rock Club Cup for best cock, hen, cockerel and pullet; \$25 cash special for best display. This record has never been equaled, and fully establishes our claim that our Barred Ply. Rocks are the greatest producing strain in America. We have not exhibited this season, but have sold winners for the largest shows in the United States and Canada. We have still a limited number of grand breeding and exhibition birds for sale.

Eggs for Hatching Our yards for '07 will contain the choicest and most carefully selected breeders we ever owned. Free mating list tells all about them, with prices of eggs, show record and letters from customers.

MODEL INCUBATORS AND BROODERS

Chas. A. Cyphers and a Message

February is here! The sun is beginning to burn a hole through the clouds that have persistently hung over us for two months, and progressive poultrymen are beginning to burn a hole in their spring work.

The layers are getting busy. These are the May and June-hatched pullets that helped to fill our laying pens—helped to progress that would have been impossible without them. But where is the poultryman who, as he watched his late pullets maturing in December, did not wish that he had hatched earlier last spring so that from his September and October-matured pullets he could have marketed eggs at the long prices that ruled all fall and early winter?

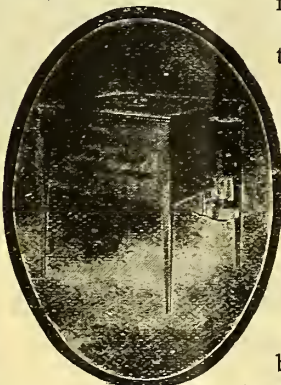

The tendency this year is to get to work early and secure more early birds than heretofore. Poultrymen met at the shows express general satisfaction with last year's work, but every progressive poultryman tries to button the work up a little tighter each year; to get the work done on a little better time schedule. All over your plant signs are saying, Get to work: summer will be here before you realize it. A month lost can't be recalled. Get busy!

And the greatest thing is to have the right equipment and enough of it! The most successful of you already have the Models. Decide on the additional number you will use this year and get your order in promptly. I can ship the day after your order is received.

If you have not had the success you should have had; if you cannot count profits proportionately as great as those of the Lakewood Farm—Crystal Springs Farm—Valle Crusis Farm—Blue Mountain Farm—don't be discouraged. We all make mistakes. If you are handicapped with a low-grade equipment that, no matter how hard you work, makes progress impossible, throw it aside. Charge up the cost to experience. Start the new season right with the Model equipment made by the man who knows what is necessary to hatch and rear chickens; and who, on the big Model Farm this summer, has hatched and reared more chickens than were ever before turned out in a full season, anywhere, at any time, by any one.

On the Model Farm we are sure of our equipment. The Model Incubators and Brooders will meet every demand we can make on them. We have over twenty thousand birds now,—many going to market,—more coming on every day. We are preparing to get out a lot in February and more in March and April that, together, will give us thirty thousand early pullets next fall. We want to reap the benefit of fall's long prices on eggs.

Send for the Model catalogue. Let us tell you why the Model Incubators hatch more and stronger chicks than any other machine.

BLUE MOUNTAIN POULTRY FARM

Chas. A. Cyphers, Buffalo, N. Y.

Stroudsburg, Pa., January 5, 1907.

Dear Sir:—I have been using your machines since 1896, and I still have one of the first machines you put on the market. It is in constant use, and still does good work. I am now using 47 Models, and they are the easiest to run and to clean up, after a hatch, of any I have tried. I hatched 43,000 ducks in them last season, hatching an average of 71 per cent. of the fertile eggs. Our last hatch was 279 ducks out of one machine. Wishing you a very prosperous New Year, I am,
Yours respectfully, Wm. H. Truslow.

Also send two dimes for a copy of my book, "Eggs, Broilers and Roasters." It gives the cost of production in all branches of the poultry business. It gives the market quotation week by week averaged for three years. It shows when a chick hatched any week in the year could be marketed as a broiler or as a roasting chicken, and the profit it would make. It also tells of the profits of egg production and how best to secure them. Write me today.

Your Hatch Will Be Right if your Thermometer is Right

An Incubator Thermometer is small in bulk and in price, but it is the most vital part of an incubator. It is the heat that hatches, but to hatch right the Thermometer must be right. It makes little difference what make of incubator you use, if your Thermometer is accurate and you keep the temperature at 103 degrees. To be absolutely safe, use the

HOEHN RED CROSS THERMOMETERS

The bulb rests upon the eggs so that the Thermometer gives you the temperature you want to know. It is easy to keep this at 103 degrees, because this point is emphasized by a narrow point. The black metal frame with white graduations and figures makes it easy to read. These Thermometers are all well seasoned and accurately tested before being shipped. Send 75 cents for a sample Thermometer (prepaid) or ask for catalog illustrating other styles. This catalog is free. It answers your questions about Incubator Thermometers.

**Get Our
Prices Before
You Purchase
Elsewhere**

Let us tell you how our superior facilities for the purchase of materials and the manufacture of machines will save you money and get you better value in your incubators and brooders.

Did you ever stop to consider that our knowledge and experience will pay **you** continued dividends from our machines? Just think of the waste to you if you bought a machine that was always 10 to 15 per cent short in its hatches.

We are not a new concern compelled to buy green lumber and make into machines next day. Our incubators will not warp and crack and leak nor "fall down" and waste your eggs, oil and time. They are built for service and will be found in use year after year. We put a good; honest weight of copper into our boilers and tanks. Our doors fit and close tightly. Our regulator regulates. Our lamps burn clear and brightly. When you get the Victor you get machines that will hatch and raise chicks.

Let Us Send You "The Victor Book"

which tells why Ertel machines make more money for their owners. You owe it to your own pocket to find out what our machines can do for you.

Our "Victor Book" tells all the facts about lumber, about copper tanks, lamps, burners, regulators, thermometers, which the man or woman who runs the machine wants to know. We are careful to tell the exact facts, because with every machine we sell, we send a Bond under the seal of our Company, agreeing to take it back and refund your money if it is not in every way as we said it would be. Ask anybody in Quincy who knows us or anyone anywhere who has ever had dealings with us whether it is safe to do business with us.

Just say on a postal "Send Victor Book" and we'll do it.

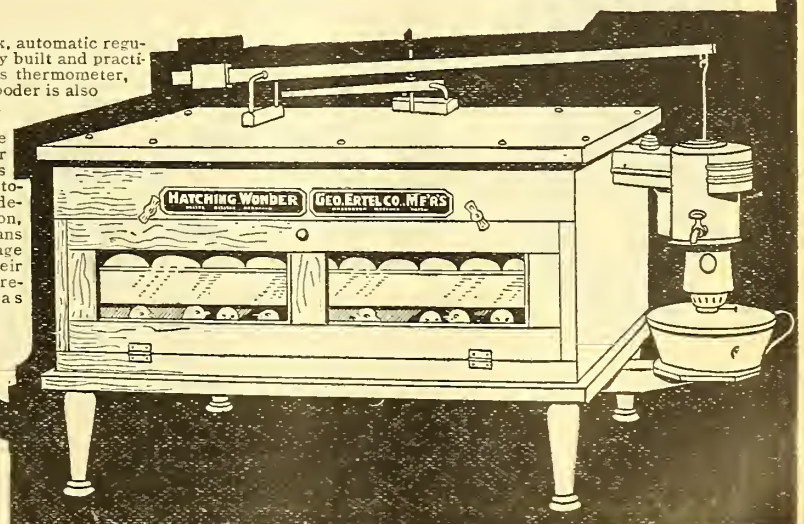

GEORGE ERTEL CO., Quincy, Ill.

40 Years in Business.

ESTABLISHED 1867

This 100-egg Hatching Wonder delivered for \$7.90

Hot Water heat, large aluminum-coated tank, automatic regulator, triple case, nursery. It is substantially built and practical in operation. The \$7.90 price includes thermometer, funnel and book of instructions. The Brooder is also a well built, practical machine and when the two are shipped together the price is only \$11.50 delivered east of the Rocky Mountains. The Incubator delivered west of the Rockies is \$9.90; Incubator and Brooder together, \$14.75. Our prices are delivered at your railroad station, not f.o.b. factory, which means you may have to pay cartage from the factory to their station. Money refunded if not as represented.

**Can Any
Incubator Do
More Than This?**

Summitville, Ind.
Geo. Ertel Co., Quincy, Ill.

Gentlemen—I want to say that the incubator I bought of you hatched every egg and raised every chick. You can guess how well they are doing when I tell you that at six weeks old their average weight is 16 ounces. S. C. B. Leghorns at that. I shall want a large incubator and several large out-door brooders in a short time.

Thanking you for past favors, I am,

Respectfully, JOHN R. BOYD.

MAKE YOUR OWN CUT GREEN BONE

It's a very easy, simple operation with a **CROWN Bone Cutter**. Green bone makes eggs, and stimulates the hen's productive organs. Cut bone fresh every day. The Crown does it quickly with no bother or muss. 25 years building cutters. Write for free catalog. **WILSON BROS., Box 600, EASTON, PA.**

HERE'S THE KEY TO SUCCESS

Hatch your CHICKENS under natural conditions, with the precision of the old hen, and without care or anxiety to yourself.

The Universal Regulator

is operated directly from the thermometer lying on the eggs; an electric connection being made through the mercury in the thermometer at 103°, raising the damper if the heat of the eggs goes above, and closing damper if the heat goes below that point a fraction of a degree.

Impossible to spoil your eggs.
Never requires any adjustment.
Hatches every egg a hen can hatch.
Produces chickens that will live.
Made to last a life time.
Guaranteed to be satisfactory.

Send postal asking for illustrated booklet.

THE UNIVERSAL SPECIALTY CO.,
PLAINVILLE, CONN.

BUY A QUEEN INCUBATOR DIRECT FROM THE FACTORY

"Queen" Incubators save Oil—
"Queen" Incubators save time and work and worry—

"Queen" Incubators are built to last a lifetime—

We give you a perpetual guarantee—
"Queen" Incubators cost no more than ordinary machines—

You pay no profit but the manufacturers' profit when you buy a "Queen."

We take all the risk—if they fail to work in a single particular we return your money as cheerfully as we ship the machine on your order.

We can make such a guarantee as this because we know absolutely that the "Queen" never fails.

If you will give us an opportunity we will prove to you that we have the Incubator you want—

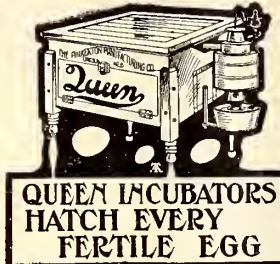

We know we have because we have tested the "Queen" in every imaginable way and it has withstood every test to our entire satisfaction.

"Queen" Incubators hatch more eggs, with less attention, less fuel, less worry, less work than any other incubator made.

A \$100,000 company stands behind every "Queen" Incubator sent out—

Reason will tell you that they must be right.

We have only one fear—that is that you may fail to have the superiority of the "Queen" called to your attention before you buy.

"Queen" Incubators are built in the finest Incubator factory in the world, by the highest grade mechanics that can be found.

"Queen" Incubators are built of carefully selected California Redwood, the highest grade of cold-rolled, heavy, sheet copper, perfect sheets of asbestos—Nothing goes into "Queen" construction but the best—The finish on "Queen" Incubators will do credit to your parlor.

If you make comparison between the "Queen" and other Incubators you will buy the "Queen." The superiority of the "Queen" is so evident that you cannot help it.

As a hatching machine they are all there but the cluck.

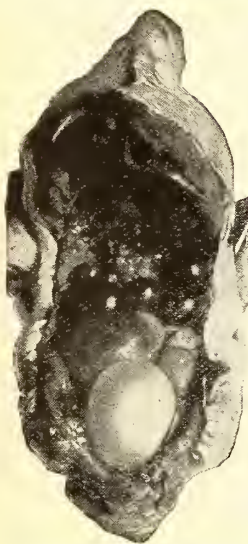

Send for our Free catalogue, choose the machine you want and order it shipped on your own terms—you name the terms we ship the machine.

PINKERTON MANUFACTURING COMPANY,

DO YOU KNOW The Potter System of Selecting Laying Hens ?

Don't kill a hen in this condition but learn the secret of selecting the laying from the non-laying hens.

Greatest Discovery of the Century in the Poultry World

Do you know how you can have \$2 profit not a \$1 loss, on every hen you keep?

- How to breed only laying hens?
- How to select your laying hens?
- How not to kill your laying hens?
- How to mate your birds for best layers?
- How to save feed and labor and money?
- How to keep the layers and kill the non-layers?
- How to tell the drones and the barren hens?
- How to select the best laying pullets?
- How to stimulate the hen's laying organs?
- How to estimate the number of eggs a hen will lay in a week or a month?
- How to keep fewer hens and make more money?
- How to keep your fowls and their quarters free from mites and lice?
- How to hatch chicks that will make laying hens?
- How to make poultry pay every month in the year?

DO YOU

want to make more money on your poultry? Do you want to be able to pick the layers from the loafers in your flock? Decide for yourself whether you need the valuable information we are offering. Thousands of poultrymen are using the Potter System to their profit and advantage. So can you. Write today for free circulars telling about it.

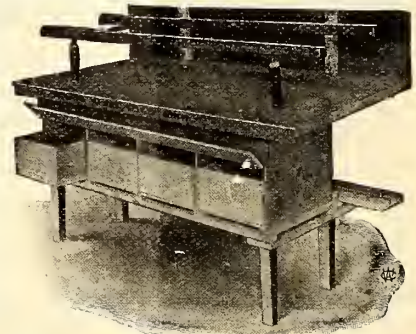

DON'T BUILD THAT NEW HEN-HOUSE

or think of fixing up the old one until you have seen our large new 64-page catalog on poultry house fixtures. The biggest and best ever issued; over 50 illustrations showing hen-house fixtures in three styles and twelve sizes. Also "Simplex" Trap Nests; W. P. attachment, etc. No poultryman can afford to be without this book. For eight years we have manufactured this line of goods. Thousands of poultry houses in every section of the country are equipped with Potter fixtures. You can have convenient and sanitary quarters, and you can save time, worry and money by using them.

Our Catalogue tells you how to keep free forever from these pests—LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for one red stamp to cover postage.

WRITE US TODAY

for free circulars on the POTTER SYSTEM and our new catalog. They will please and interest you.

T. F. POTTER & CO. - Box A, Downers Grove, Illinois

One half of all the chicks hatched never get more than three weeks from the shell

THAT'S the distressing part of the poultry business. It is no trouble to hatch chicks. All the trouble lies in the raising.

Little chicks die by thousands, of bowel trouble, of "sleepy disease" or some unknown cause.

The crying need is for some right ration as to what the weak, unused stomachs of the little chicks will stand and what it is necessary to put into them.

For there is no question about it—90% of all the deaths among little chicks are due to improper feeding.

Darling's Chick Feed

gives poultry raisers a feed that is adapted to little chicks' needs.

It is a scientifically balanced ration, not

prepared for broiler making, for fattening, for laying hens—not prepared or intended for any other use than just feeding chicks.

Stop the Losses

You can double your profits if you can raise practically all the chicks you hatch.

The secret lies in feeding something your chicks will digest and assimilate.

There is no trouble about their digesting Darling's Chick Feed. It is the one remedy for your losses.

Here is a good part of the reason why they are better than other feeds:

Darling & Company are not in the milling business. We are not manufacturing breakfast foods. Darling's Chick Feed is not a by-product nor waste from any manufactured article.

The best grains and seeds are selected. We take only such as are known to be adapted for feeding chicks. They are properly screened and cleaned. They are rightly balanced and they are reduced to proper size.

What Poultrymen Say

Give me Darling's Chick Feed and I can raise 95% of all the little chicks I can hatch. I have proved this. It makes them grow and they are spry. I don't want anything better.

James Gage, Elgin, Texas.

Our young poultry is doing nicely. You ought to see our young ducks grow.

E. Green, Ceylon, Pa.

My hens have laid more eggs and my chicks have grown better than ever before.

August W. Schroeder,
Chestnut, Ill.

I have ducklings eight weeks old that have been fed your feed that weigh 5 lbs.

F. E. Shaffer, Wakenda, Mo.

Feed for Growth

Darling's Chick Feed causes a rapid growth right from the start.

Being adapted to their requirements, chicks invariably develop a good, strong framework that makes for the healthy full-grown fowl.

They mature early and pullets begin laying much sooner than those fed in the usual manner.

Fowls, like other animals, require special purpose feeding to make winners.

If your object is laying hens the surest way to get them is to start the chicks on Darling's Chick Feed.

The same course will give you more weight in broilers and roasters, finer, larger, market fowls and do it in shortest possible time.

It is worth while. The returns you will get will outweigh many times over the little expense of special feed to start chicks right.

Price \$2.50 per 100-lb. Bag
F. O. B. Chicago or New
York, cash with order

Darling's Famous 100-lb. Bag Line.

"WHAT THE HEN THAT 'STOLE' HER NEST TAUGHT US"

We certainly created a lot of favorable comment in poultry circles last month with the announcement of the new improvement in the 1907 Prairie State Incubator.

The unique, yet thoroughly common-sense methods we pursued in our investigations for the purpose of improving this year's machine over its already successful record as a hatcher appealed to the poultry public with particular force.

It was a most agreeable surprise to them, and the wonder of it is that somebody did not think of doing the same thing long ago, as it seems now like the only common-sense method to pursue.

For the benefit of those who may not have read about the novel investigations we conducted the past year in our search for "more practical knowledge" on artificial incubation, we will briefly outline our experience. If you can get a copy of last month's issue, better look up our announcement.

You know Nature furnishes the basic principles of practically every science or art of today. In our study of artificial incubation we determined to go back to first principles—back to Nature, and that of course was the "old hen."

We waited an opportunity—until the old hen "stole" her nest, for we wanted Nature in its truest sense.

How We Tested the "Old Hen."

With the aid of the most accurate apparatus we then recorded the conditions exactly as they existed under the "old hen" during the stage of incubation and made a careful record of the temperature, humidity, etc. We also tested hens set in nests on the ground, on floors, in elevated nests and made systematic records for comparisons.

We obtained some mighty valuable information from Nature, and with this we were unusually well equipped to begin improving the Prairie State for 1907 so that it would obtain the same conditions in the egg chamber as we found exist under the hen as far as it were possible by artificial means.

Anyone can readily see the great advantage we obtained, and to prove still further the lessons we learned from the old hen, when applied to our machine, we made over 60 exhaustive tests to ascertain the actual, practical conclusion.

We wanted to make sure that the 1907 Prairie State would reproduce the

same hatching conditions as were found under natural incubation.

At the New York and Chicago Shows.

We are satisfied that those who saw our machine in operation at the New York and Chicago shows were thoroughly convinced that the Prairie State is the "nearest to nature" hatcher yet devised, and the chicks that were hatched during these two big shows are the best evidence that could be offered.

Testing
The "Old Hen"

Did you see 'em?

Didn't they look just like chicks taken from the "old hen"?

That's all because of the ideal conditions—the natural, hen-like conditions—under which they were hatched.

No wonder we were accused of showing chicks hatched by hens. Even the down on the chicks hatched in this year's machine is just like that on hen-hatched chicks—long, fluffy and thick. The chicks are larger, stronger, livelier, more active and full of healthy, nutritious blood.

Stop the Ten Day Death Loss.

That anemic (consumptive) condition so common with the usual incubator-hatched chicks and which takes off such large percentages during the first ten days is entirely overcome in the 1907 Prairie State.

This is a point we want you to remember—it means many dollars to you, for what gain is there to be had where the loss just after hatching is so great?

In the Prairie State this has been overcome by re-constructing the egg chamber so as to obtain "natural" conditions. Heat is supplied just right, ventilation is practically perfect and the proper amount of humidity is retained to provide the eggs with hatching conditions just like those under the hen.

These are things the old hen taught us. We have been manufacturing incubators and brooders for 26 years and

we freely admit that we have made greater advancement in solving the problems of artificial incubation the past year than ever before.

We have retained all the good qualities of last year's machine, and by adding the "greatest step" of this year we have a machine which not only possesses the highest hatching powers of any made today, but in addition a machine that brings off chicks stronger, bigger, full of healthy blood—just like hen-hatched chicks—than any other on the market.

New Hampshire College Agriculture Experiment Station

Durham, November 12, 1906.

Prairie State Incubator Co.
Gentlemen:—The Prairie State Incubator in use at this Experiment Station during the past season has given good satisfaction. The machine was easily kept at a uniform temperature and hatched out good strong chicks.

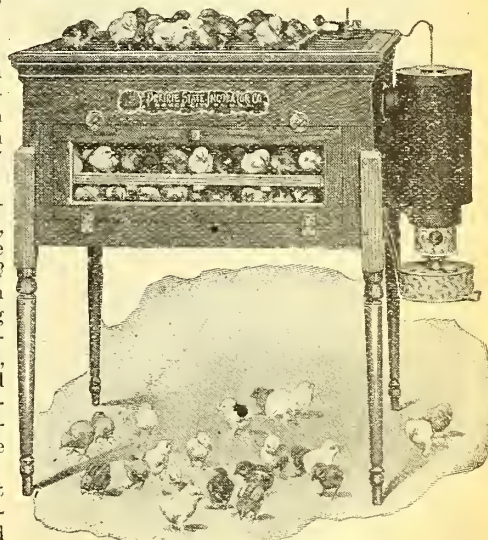

Yours very truly,
E. L. Shaw, Assoc. Agriculturist.

Now why trust to luck in buying an incubator? Why not buy the machine that has proven itself the "nearest-to-nature" hatcher yet put out? Why take second best when the best is available—is cheapest in the end—is dependable?

Remember, it isn't the chicks you hatch—it's the chick you sell or raise to maturity that shows the profit. The Prairie State hatches them strong enough to get out of the shell and get over the critical period.

Avoid Mistakes in Building.

Just send for our 1907 catalogue—it shows the detail construction of this great improvement, illustrates completely our tests of hens and incubators and will interest you more than any incubator catalogue you ever read. It's free also—our New Brooder catalogue.

H. O. SHAW, Box 103, Grinnell, Iowa.

Can You Tell Why Chicks Die in the Shell?

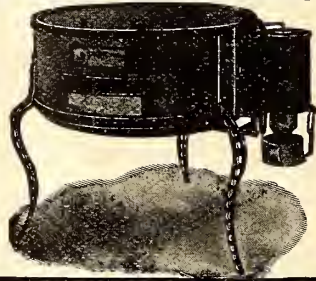

Perhaps not one person in twenty can. Why a chick which has developed almost to the point of leaving the shell should die is a mystery to many. Of course, there is a cause for this, and when that cause is understood the remedy ought to be suggested at the same time.

Heat, moisture and ventilation are the three essential elements to the hatching of chicks. If any one of these elements is lacking in the slightest degree, failure results, or at best but partial success will obtain.

The New Method Incubator

Manufacturers of the old style box incubators have always realized the weakness of their methods and to meet the complaints of customers have assigned as a reason why chicks die in the shell first one cause and then another—finally laying the blame on the incompetency of the user. But this did not solve the problem. In The New Method Incubator we have perfected a mechanical apparatus that correctly duplicates Nature's methods of incubation—we are able to control the three elements essential to hatching. The open circle self-ventilating nest, with its soft, downy pads, automatically regulates the moisture and ventilation perfectly, while the conical deflector distributes the heat evenly to every portion of the egg-chamber. These exclusive features make the New Method the safest, surest, simplest hatcher ever devised. New catalog describes them all. Write for it today—it's free.

New Method Incubator Co., 150 W. Main St., Morrow, O.

Something New Under The Sun

A Convertible Incubator and Brooder. Two Machines In One

As An Incubator.

Just what you want.

A winner from the start because it has every advantage every old style incubator has and in addition so many new things no other incubator or brooder has.

Here is a machine you can hatch the eggs in, and rear the chicks as near like the old hen does as it is possible by artificial means.

You don't have to transfer the chicks from the temperature in which they were hatched to another entirely different in character (if not in heat) to rear them with this machine.

The same conditions prevail as under the old hen. The same temperature, moisture, ventilation which hatched them can be used to rear them.

Can any other machine do that?

Some will immediately say, "I don't want to tie my incubator up as a brooder, I want it to hatch further settings."

Alright, you can do this too.

While the machine is a convertible one, from an incubator to a

brooder, it can be used as either continuously. You see that's where it is so far ahead of any other.

That's why we say it has all the advantages of either a regular incubator or brooder and has in addition the advantage of both, to say nothing of the feature of hatching and rearing just like the old hen does—with same condition throughout incubation and rearing.

Suppose you put a hatch in this machine and when it comes off you're not ready to put in another setting. All you need do until you want it for hatching again, is to remove the egg trays and you have as good a brooder as a hatcher.

Those who don't care to bring off more than a few broods in one season, will find this machine "just what they need." They'll find it a great saving in time and money.

They'll find it more successful because they will learn to operate one machine better than they can two different machines.

Hatch 'Em and Rear 'Em In the Same Machine

It will save them the expense of an extra machine to rear with. It will do better work because it does it nearer like nature does.

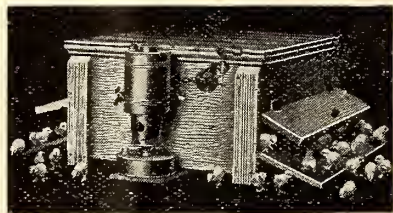

It's certainly a remarkable step in incubator and brooder building.

As for its hatching and rearing qualities, the fact that it was invented by a man who has had years of experience and "knows" his business from every day practice, guarantees its merit. Besides, if you do not find it equal in this respect to any on the market you need not keep it a minute.

It is a hot water machine. Has new patented tubular copper tank, so arranged that temperature can not help but be absolutely uniform. Outer tubes are closer to eggs—also chicks when used as a brooder.

Hover has felt cloth which lays on eggs and backs of chicks just like the "old hen's" body. This helps to retain the natural moisture in eggs—furnishing "contact heat" to both eggs and chicks as the hen does making it a "natural" hatcher than any machine on the market.

Lamp and boiler are enclosed out of danger from rats, dogs, cats, etc. Case is well made of

As a Brooder.

best grade lumber, has door on each side eliminating all corners in which chicks can crowd thus making an ideal brooder. Furnished with long or short legs.

The machine is equipped with the Famous Acme Compound Regulator and Acme Burner, manufactured by H. M. Sheer Co., which is a guarantee that they will do the work well.

Regulator enters end of machine, leaving top clear of all obstructions. While it is new it is not an experiment. Its principles are time-tried and successful.

Now here's an opportunity to get a machine that does the work of both an incubator and a brooder, at the cost of but one machine.

We guarantee it to be just as represented.

The Convertible hatches every hatchable egg and raises every chick it hatches.

Send for our Convertible

catalog today. It gives

full detailed descriptions,

illustrations and the remarkably low

price asked for such a remarkable machine.

RELIABLE'S SILVER JUBILEE

25 YEARS ON THE MARKET

1907

For 25 years the Reliable Incubator has weathered the storms of **actual test** in the hands of both expert and inexperienced operator and today it is acknowledged by those who know **from experience** to be the most satisfactory and practical machine made.

It stands to reason that with 25 years experience in building incubators and brooders we **know how** to build successful machines. It stands to reason if you buy a **Reliable Incubator or Brooder** you are not buying an experiment—you are getting the best that skill, experience and reputation can produce backed by 25 years actual test in the hands of users.

That's better than all the claims of all the incubator makers combined. What the **Reliable** has done during the past 25 years are **facts**. They are in use today by poultry-

men all over the world and they all tell the same story about **Reliable's** reliability. The secret of the Reliable's success is soon told. **Reliables are Right**. They are scientifically constructed and simple in operation. There are no complicated parts to get out of order and with reasonable care they will last for years.

They are made by skilled workmen from the very best of material in the largest and best equipped incubator factory in the world. Every machine sold has our positive guarantee, a guarantee backed up by a quarter of a century of experience and progress. Why take chances with other makes when the same price will buy a Reliable and you run no risk. Send for our 1907

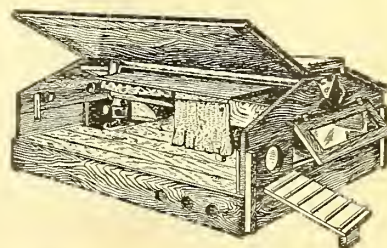

CATALOGUE

It's our Silver Jubilee issue celebrating our twenty-fifth year in the business. It tells all about the machines built by the Reliable Incubator and Brooder Co., and why they are better than others. It shows how our double heating system saves one-third the oil, preserves perfectly even temperature, does away with artificial moisture and makes draughts and hot spots impossible. It shows why Reliable Incubators hatch more chicks and why Reliable Brooders raise a larger percentage after they are hatched. If you are interested in poultry you will be interested in this book. It's a book that will save you money. The following are some of the many testimonials it contains:

E. J. Atkinson says: "192 chicks, 200 eggs. What do you think of that?"
 Marcissi Charbert says: "Discounts the hen 50 per cent."
 Fred N. Fargo, Dixon, Ill., says: "Never varied one degree in five hatches. Did better than hens."
 Aug. Horning, Castorville, Texas, says: "Using several Reliabilities. Average over 90 per cent."
 W. W. Finham, Northville, Mich., says: "The Reliabilities beat the world."
 A. H. Wakefield, Goodwin's Mill, Me., says: "Can't make a mistake in buying a Reliable."

KNUDSON METAL STAMPING WORKS
Box 10, Everest, Kan.

LICE PROOF

Strongest Fence Made

When you buy our **High Carbon Coiled Spring Fence** you buy strength, service and durability combined. Twenty years of experience—hard knocks, taught us that the best fence is made from heavily galvanized **Coiled Spring Steel Wire**

CLOSELY WOVEN FROM TOP TO BOTTOM

Our Fence is so closely woven that small pigs cannot "wriggle" through it. So strong the vicious bull cannot "faze" it. We have no agents and do not sell to dealers but sell direct to the user

AT WHOLESALE PRICES FREIGHT PREPAID

Coiled Wire provides for expansion and contraction and prevents sagging between posts. Every pound of wire used in the construction of our fence is made in our own mill from the best high carbon steel obtainable. We give

30 DAYS FREE TRIAL that our customer may be sure they are satisfied. We make a full line of **FARM AND POULTRY FENCE**. Our wholesale prices will save you money. Catalog Free.

COILED SPRING FENCE COMPANY
BOX 82 WINCHESTER, INDIANA.

In Petaluma Country.

The fact that beyond the Rockies, the western third of the U. S., there are more

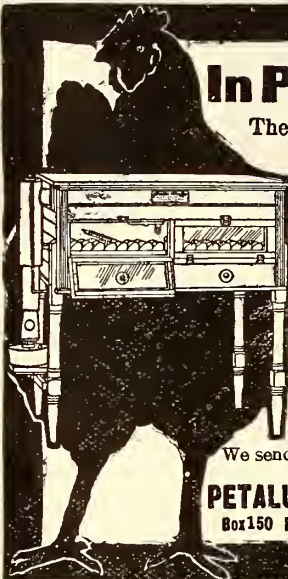

Petaluma Incubators

used than all other makes combined shows how they are regarded at home. The people there know them by their works, and they have all climates in the world, high altitude, sea levels, fogs, extremes of heat and cold, dry hot winds, rainy seasons, quick changes. It's the one machine that in all atmospheres establishes hatching conditions and brings everywhere the best results. "Petaluma" Incubators and Brooders are the oldest and most reliable machines on the market to-day. Self regulating and ventilating, supplying moisture where needed. Copper and redwood, the materials. Freight paid all over U. S. Read, "A Bit of Incubator History" in our new catalogue.

We send it FREE. Address nearest office.

PETALUMA INCUBATOR COMPANY,

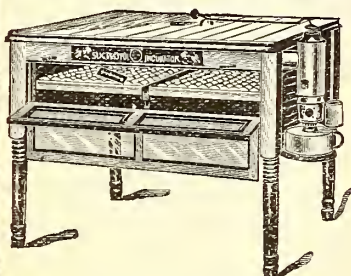

Box 150 Petaluma, Cal. or Box 150, Indianapolis, Ind.

If You're In Earnest

about poultry raising, outfit with approved incubators and brooders. All the failures come from people who go at the poultry business in a half-hearted way and try to "get along" with most anything. You'll not fail if you use

SUCCESSFUL

Incubators and Brooders

No one ever failed who really gave them a fair trial. They are record hatchers and brooders, not experiments or makeshifts. For many years they have been hatching more, stronger and better chicks

and raising more of them to maturity than any other machines made. They consume least oil, take least attention, are

MOST RELIABLY SELF-OPERATING

and produce uniformly best results under all conditions. We have the proof for every one of these statements. Write us for it. Incubator and Poultry Catalogue FREE. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

DES MOINES INCUBATOR CO.,

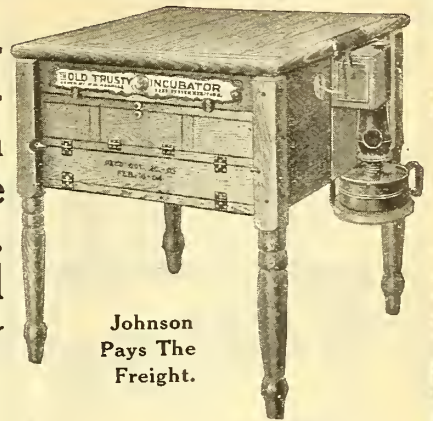

1 Second St.

DES MOINES, IOWA.

We have a full line of all poultry supplies, standard bred poultry and fine eggs, listed at lowest prices in our free catalogue. Send for it.

THIS is the Reliable Old Trusty Incubator that Made the Big Record. It has been improved in Some Points for 1907, but the Principles Haven't Been Changed. More Old Trusty Incubators and Brooders were sold last year than any other one Brand on Earth.

Johnson
Pays The
Freight.

THOUSANDS of people have bought Old Trusty Incubators during the past few years,—nearly 40,000 of them in 1906. Why? There must be a reason. All these good, average American men and women can't be very far wrong on this question. Poultry Lovers are a pretty level-headed set of folks. You can't fool 'em to any great extent. They know what they want. And they know when they get it, too! So, I say, the best thing that can be said about Old Trusty is the fact that it leads the procession in actual sales. My business has grown very rapidly. Two additions to the Old Trusty factory last year; working force about doubled; splendid new office building put up; new warehouses established at different points for quicker distribution,—these things tell their own story. They should interest you, as a possible buyer of an incubator, because they prove that Old Trusty is worthy of your confidence.

Old Trusty Is a Hot Water Machine.

It contains the most perfect hot water pipe system ever devised. Tank is made of 12-oz. hard rolled copper, twice as heavy as other boilers.

The warm water circulation in the boiler and through pipe system is rapid, which means an even temperature in the egg chamber at all times, and economy of lamp power. No cold corners,—no hot centers—in Old Trusty! The patent jacket around boiler saves 15 to 50% kerosene.

Joints are locked and heavily double soldered. All pipes are tested under 30 pounds pressure. Leaks are very rare. Only two have ever been reported to me out of the many thousands of Old Trusty machines shipped from my factory.

I use California Red Wood in Old Trusty, because it will not twist, curl, or warp. I'll give you \$5 for every knot you find. And this wood is also lightest weight, handsomest, and the best non-conductor of heat and cold. I have used hundreds of cars and I never saw a cracked or "checkered" board.

Old Trusty has double walls with dead air space between. Lid is double, with a combination of asbestos and fibre between. Same is true of the bottom.

Every Old Trusty machine is equipped with direct-acting, automatic regulator, attached and connected outside of the egg chamber. Egg trays run in double slides and are self-supporting, though nearly removable from chamber,—an exclusive feature of my incubators.

But I won't say more here about the description of Old Trusty. My free book tells the whole story, and its mighty interesting reading, too! Write for it.

I HAVE been making incubators for many years now. Made over 50,000 before I worked up to my present perfect Old Trusty machine. Without any foolish vanity on my part, I think this experience in studying incubation, raising and caring for poultry and actual manufacturing entitles me to a reputation as a practical incubator and brooder man.

You see I know my business. I've been clear through the mill and have learned by "hard knocks" how to make machines that will stand the test. I was born on a farm, and raised with the chickens and had to dig for what I have got. In my catalog you will find an account of my ups and downs before I finally met with success. During all the years I was working and planning to produce an incubator that would do to tie to, my best friend and business partner was Mrs. Johnson. Some of the best ideas in Old Trusty are hers. I tell you, Friends, it takes a Woman to work this poultry proposition out right. She is a natural born chicken raiser, and don't you forget it.

Well, we pegged away, experimenting, testing and improving our machines until finally we got one which suited us right down to the ground. It overcame every weak point that had appeared in other models. The result of our several years of painstaking effort looked good to me.

I said—"Let's give it a name," and Mrs. J. suggested that we call the perfect model "Old Trusty," the name of our faithful old dog who had followed our fortunes for several years, and is with us today here in Clay Center. That is the origin of the famous Old Trusty trade-mark so familiar to thousands of poultry raisers all over the country.

Old Trusty Free Trial Plan

Any incubator that isn't good enough to sell on a fair test plan, isn't good enough for you to buy. Isn't that good horse sense? If the maker isn't sure of his machine, of course he can't afford to take any chances.

Now, I don't ask you to buy a "pig in a poke." When you send me the price of an Old Trusty Incubator or Brooder, there is a string to the money and you hold the end of it. My free trial plan protects you, because I say to you like this: "Just try Old Trusty through one hatch—about 40 days—and note results. The machine must do what I say it will, or you are under no obligation to keep it." If not satisfactory—if you are at all uncertain—I will allow you a second or even a third hatch—60 to 90 days—in order that the test of "Old Trusty" may be absolutely conclusive. And then, if you're satisfied, keep the machine. If not, send it back at my expense. What do you think of that for a fair offer? Can you beat it for liberality anywhere?

I not only offer you a full, fair, free trial of "Old Trusty" before you buy, but I also stand right behind my machine with an iron-clad guarantee after sale is made. If, at any time within five years, "Old Trusty" fails to come up to representations, I will refund your money.

Johnson Says "Send for My Catalog"

You'll miss a big treat if you don't. This is the prize Chicken Book of the Year—the biggest and best bunch of good things for you Poultry Raisers that ever broke into print. It will seize you with a firm grip and hold your interest at white heat. Not a dull moment from cover to cover; 120 big pages that will tingle your blood and make you glad you're alive! 300 pictures, mostly photographs, of interest and practical value to the newest beginner as well as the old-time poultry man. Experiences of Mrs. Johnson and myself in the poultry business, scenes of life on chicken farms, practical rules and sound advice that will save you money—these are a few features of hundreds that make this book worth reading. It is free to you, Friend. Send for it today, and see for yourself whether my description is overdone. Address me personally.

Johnson, Incubator Man.

WHITE WYANDOTTE FORCE SALE

OUR WINNINGS of 1906 are unequalled by few, if any. We do not boast of winnings so old they are musty, but prove to you by our latest winnings that we have the BEST. To say nothing of the winnings our birds did in the hands of our many customers, we showed our birds at the great A. P. A. Show at Cincinnati, O., Jan. 16-20, '06, Tom Orr, Judge, and won nearly every prize offered, and specials for best cock, hen, cockerel, pullet and best display.

Indianapolis, Ind., Feb. 4-10, '06, W. C. Pierce, Judge, 1st, 2d cock, 1st, 2d ckl., 1st, 2d hen, 1st, 2d pullet, 2d, 3d breeding pen, 3 silver cups as specials.

Ind. State Fair, Sept. 10-14, '06, F. Shaw, Judge. In a very hot class we won 1st, 2d, 3d cock, 2d ckl., 1st hen 1st breeding pen.

Nashville, Tenn., Oct. 8-13, '06, F. J. Marshall, Judge. With 253 birds in the class, our birds won 1st, 3d cock, 1st, 2d ckl., 1st, 2d, 3d hen, 1st, 3d pullet, 1st, 2d breeding pen.

We have mated our breeding pens and find we are so crowded for room that we intend to offer our birds for sale at prices that will move them. Select the bird or birds you want and order direct from this ad and get first choice.

B A R G A I N S

100 Ckls.; all around good breeders intended to sell at \$10 and \$15, must go at **\$5 each.**

200 Utility Ckls., worth twice the money asked. Will close them out at **\$3 each.**

100 laying Hens; lay when eggs are worth the most. Sale price **\$2 each.**

50 Pullets, intended to sell at \$4. Will take **\$2 each.**

"My Papa Wants to Sell You White Wyandottes"

B A R G A I N S

50 Ckls.; pure white birds, extra good in shape, in fact fit to trot out in best shows. Worth from \$15 to \$25. Will sell at **\$10 each.**

50 Pullets: line bred, extra fine, some top notchers. Worth \$10 but will let them go at **\$5 each.**

50 Pullets; fine in shape and color, good breeders. Now selling them at only **\$4 each.**

We are here offering you a grand opportunity to get some of **The World's Best White Wyandottes** at a bargain. This opportunity is for this month only. Order direct from this ad and get the choice. We must have the room and this stock must go.

Eggs : Eggs : Eggs

As we have before stated, we have mated our yards and are now in position to fill orders. Price **\$5 per setting.** Send 10c for catalogue, mating slip and a reproduction of a pair of our winners in natural colors.

The Proper Way to make Poultry Pay

Intelligent feeding is of great importance in securing large profits from poultry. To do well, fowls need food elements which nourish the body, keep the system active and provide egg-making and flesh-forming material.

One of the most excellent foods in this line, and which is a pronounced success especially in cold weather when green feed is scarce, and gives excellent satisfaction is

Harvey's Cut Alfalfa Hay

It supplies fowls with the same food properties contained in the green feed, of which they are so fond. It furnishes the elements necessary for egg-production and digestion; makes bone and muscle and produces strong, vigorous fowls. A mash made of Harvey's Electric Poultry Food and Cut Alfalfa Hay is a splendid egg-producer. It's a profit-maker, for it makes fowls thrive, and is well suited to all kinds of poultry.

Send your name and address and receive a

2 HATCHES FREE AND A 5 YEAR GUARANTEE

This is the most liberal offer ever made on High Grade Machines. We allow you to thoroughly test a Gem on your own premises by bringing out two hatches before the deal is closed. In addition we guarantee the incubator for five years. What better or more fair proposition could we make? Remember

THE GEM INCUBATOR

is a favorite with poultry raisers and is used by thousands. Strictly high grade in material, workmanship and the way it works, it has improvements and conveniences no other incubator has and is a favorite with the women folks on account of Removable Chick Tray and Nursery. It is simple in operation, hatches strong, vigorous chicks, the kind that grow to profit. It's satisfactory in every respect. Read what users say about the Gem:

Gentlemen—I have used my Gem Incubator successfully two seasons, and it is entirely O. K. Have just hatched 107 chicks from 108 fertile eggs.

MRS. H. D. PEABODY, Wakeman, Ohio.
Gentlemen—I have made six hatches with the No. 1 Gem Incubator, and got 580 chicks, the last hatch was 111 chicks from 111 eggs.

MRS. F. UNGER, Lewisburg, Ohio.
Give it a trial—we know you will like it. Catalog free.

Send for the Sure Hatch Book

"The new Sure Hatch Book is the finest of its kind ever printed." That's what everyone says who has seen it.

We want to send you one of these Free books. You can't afford to be without one, if you have chickens on the place or a place to have chickens.

This book has 102 pages of reading matter and illustrations—Scores of Photographs—taken right on the farms where chickens make money. It is written in good plain English, by practical chicken men, who know more about chickens and incubators than they do about big dictionary words. Chock full of sound sense.

Gives, practical, helpful advice on everything in the poultry business—from the eggs to the dollar—and it is all made as plain as A, B, C.

Of course, this book tells about the

SURE HATCH INCUBATOR

with its highest hatching record and lowest selling prices. Guaranteed for 5 years and built to last a lifetime. Runs itself and pays for itself with one hatch—think of it! In just a few weeks every cent you put into a Sure Hatch comes back to you, and with a profit at that.

These are not "hot air" statements. For ten years we have been saying the same things about the Sure Hatch, and it has never failed to make good.

Its success has built the largest incubator factory in the world—over 50,000 square feet of manufacturing space—and for the same reason, our sales are greater than any other.

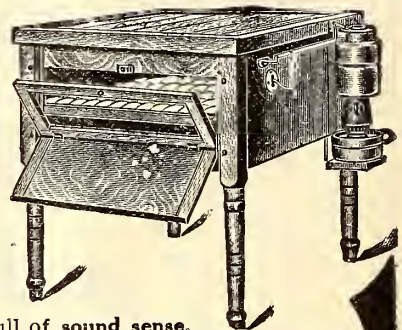

We are so sure that the Sure Hatch will "make good" for you, that we say plainly, if it doesn't, we take it back at our expense. Fair, isn't it?

Well, our new book explains everything. We pay freight. Write us today, and we will send you a FREE book by return mail.

AMERICAN STANDARD OF PERFECTION

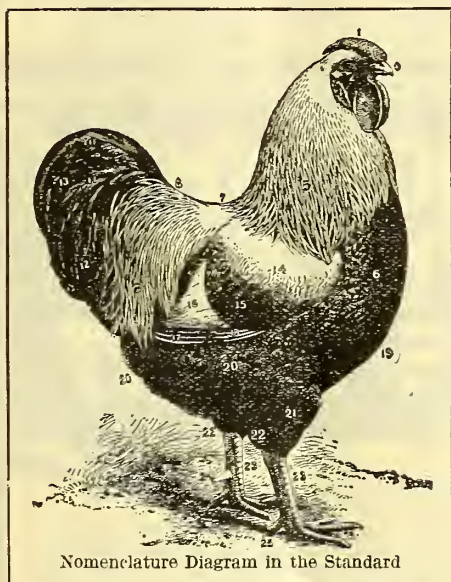

OFFICIAL GUIDE TO POULTRY CULTURE
Latest Revised Edition (1906)

304 PAGES; 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
WORK ON THE TECHNICAL POINTS OF
STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
MORE THAN THREE THOUSAND DOLLARS

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

a. A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.

b. The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.

c. Instructions to judges and the official "cuts for defects"—invaluable information for every exhibitor who wishes to be successful.

d. The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world's best poultry artists, and were revised and approved by members of the A. P. A. at a four-days' session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

THE AMERICAN STANDARD OF PERFECTION IS AN INDISPENSABLE
GUIDE IN THE BREEDING AND EXHIBITION OF PURE BRED POULTRY

**A NEW DEPARTURE IN
INCUBATORS**

It takes a lot of grit and well grounded conviction to go exactly opposite to long established theories, but we have done that very thing in The Handy Hatcher—we have successfully done what all other incubator builders have said would be fatal to the germs in the eggs. In our **NEW APPLICATION OF NATURE'S METHOD OF INCUBATION**

we go counter to all these old theories, but results have proven that the theories were wrong and our convictions were right. The very thing that is rigidly avoided in all other machines becomes the strong feature of our incubator. You'll want to know **how** and **why**. Write today—free catalog describes this wonderful invention which becomes at once the safest, surest, simplest, most perfect hatching device ever invented—the machine everyone can use successfully.

HANDY HATCHER CO.,

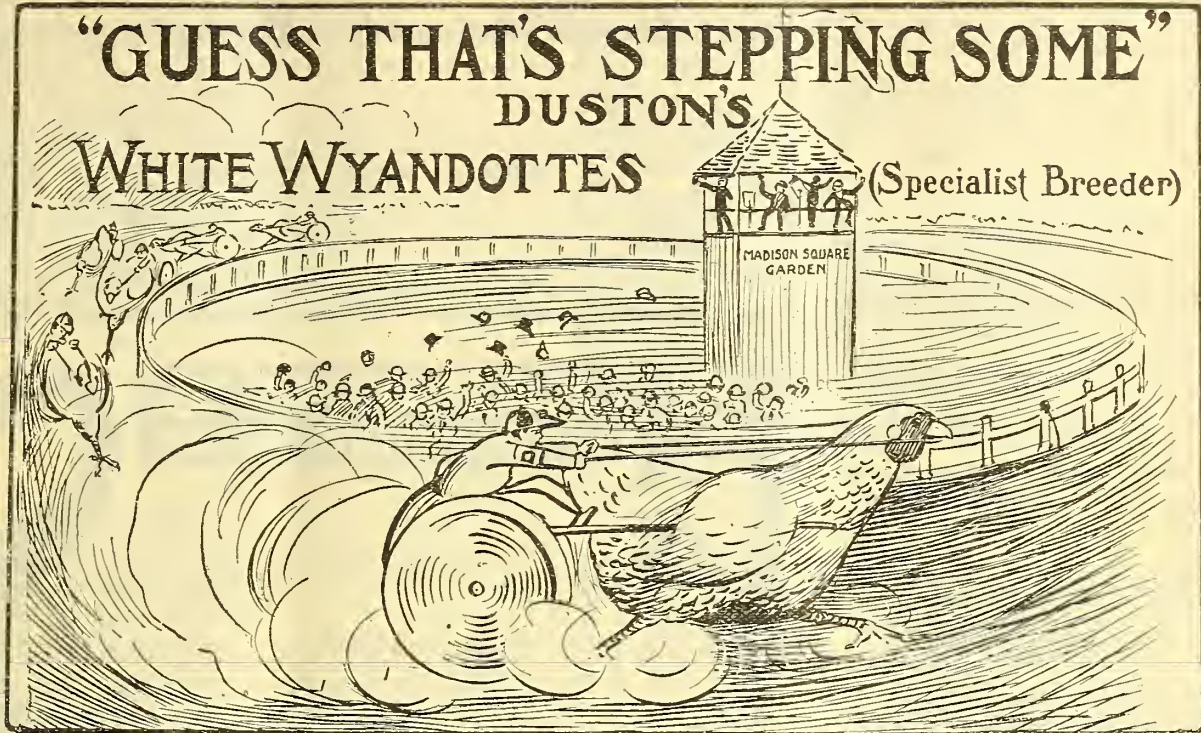

Box A

ROSSVILLE, ILL.**BUY NO
OTHER****"WYANDOT WHITE"
IS THE OIL
THAT'S RIGHT**

Pure air—even temperature—the two most important things in raising chicks. You can't be too careful about having **both** in your incubators and brooders and they both depend on the kind of oil you use. Dirty, foul smelling lamps have been the death of many a promising batch of chicks. It don't pay to work, watch and wait for weeks, pay out your good money for eggs and spend your time and labor only to have your chicks die in the shell or, if they escape that misfortune, to go out some fine morning and find them smothered to death in your brooder. You cannot afford to run any chances of losing your chicks. Pure air and even temperature are easy to secure and maintain. The problem is a very simple one—**use the right kind of oil**. Oil that won't clog the wick, that won't cause the lamp to smoke and that does not give off poisonous fumes. That's the kind of oil you get when you buy **Wyandot White Oil**. The

PATENTED PROCESS

which it goes through removes the acid and impurities found in ordinary oils and the result is an oil that burns with a clear, bright, steady flame. When you light the lamp and adjust the flame you can be sure that it will burn just that way as long as there is a supply of oil in the lamp. The flame won't grow less after burning awhile. It will keep the same intensity and even temperature all the time. It **MAKES LESS LABOR** for the lamps do not get dirty and foul smelling and are easy to keep in order. Try **Wyandot White Oil** and you'll see we've told you the truth. There are more good points about **Wyandot White Oil**. Write to us for full information and prices. **WYANDOT REFINING CO., Box A, Cleveland, O.**

DISTANCED

THE FLAG DROPS AND DUSTON

as usual the winner. The hottest show of all the world meets at Madison Square Garden, and my birds still maintain the proud distinction awarded them for the past twelve years by my fellow fanciers as the leading strain of

WHITE WYANDOTTES

of the world. After furnishing winners for all parts of the country, I won 1st hen, 2d, and 4th cocks, 2d cockerel, 3d pen, special for best display (by a liberal lead over all competitors), special silver cup for best cock, hen, cockerel and pullet, and many other specials. Don't that prove to you that DUSTON has "the goods?" He literally

BEAT THE WORLD

For this country and Canada is scoured for birds to win at the Garden. He can today fit you out with winners in all classes. C. H. COLEMAN

LOGAN, IOWA

No. 2. 232 Egg Cornell Incubator.

THE cheaper the article, the more extravagant the claims made to sell it! You know this as well as we do;—still we cannot blame you, if you are confused and all “At Sea,” when about to place your Incubator order.

We do not claim to make a machine that will **average** 100% hatches. Perfection is not a human attribute!

We do not attempt to **operate a poultry farm in direct competition** with you, our customer,—run it with **your money** and promise to pay you, in palliation, a small dividend. Are you going into the rearing of Poultry on the **fly-by-night promises** of dubious dividends, and let the other fellows **have all the fun?**

If you only want a few dollars' worth,—buy an old hen and 13 eggs for \$1. You will raise to maturity eight broilers at a total cost of \$2.25. The birds will find a ready market at fifty cents each,—the old hen will bring the same,—a return of \$4.50 from an investment of \$2.25. **A clear profit of 100 per cent.** Just think it over; then listen to **facts**.

OUR ARGUMENT IS THE FACTORY BEHIND THE HATCHER!

The **Cornell Incubator Factory**, (not rented, but built and owned by ourselves), as equipped to-day, is the **largest and most complete chick machinery factory** in the whole world.

If you doubt our statement, **come to see us**, at Ithaca. If we do not substantiate our claim by “**showing you**,” we will **pay your traveling expenses both ways**.

Our main factory building is 358 feet long, 44 feet wide and four stories high. The Mill contains the most “**Down to Date**” Wood Working Machinery money can purchase. Each machine is operated by an individual Electric Motor, of which we have 36, varying in size from 1-2 H.P. to 35 H.P.

Our new Sturtevant Dry Kiln of brick is 67 feet long, 36 feet wide, with a capacity of 250,000 feet of lumber each month.

Our new Boiler House of brick is 50 feet long, and 26 feet wide; and we have just installed an additional 80 H. P. Economic Boiler.

Our new Office Building of brick is 128 feet long, 26 feet wide and three stories high. Our Printing Office occupies the first floor and represents an investment of \$10,000. We have two Harris Automatic Two Color Presses, a Rotary Press, Paper Cutters and Folders, and are now printing our 1907 Catalogue.

With the **guns** and the **men behind the guns**, we are prepared to give you the **best** that is made in **Incubators, Brooders and Poultry Farm Appliances**; and we also add **fair treatment, free of cost**. It counts.

Our **Information Bureau**, in charge of a practical Poultryman, will assist you to **succeed in your business**.

Another point of vital importance to you. We did our experimenting years ago. We have **not changed** the position of even **one nail** in the construction of the **Cornell** during the past three years.

There's a reason for it! But why is it that the other fellows change regularly each season?

There's also a reason!

Write at once for our **Free Catalogue**. It describes **Cornell Chick Machinery and Cornell Methods**.

"Beats a Hen All Hollow"

"I am having splendid success with my Banta Incubator. Have had several hatches. Chicks are doing fine. My neighbor who bought one, just got 97 chicks from 103 eggs. I call that pretty good."—Thus Mr. Klotz, Winthrop, Iowa, writes us.

You can do as well. Another says: "The Banta Incubator is no more care than one setting hen." Still another says: "Received brooder in good condition. Put in my chicks. They are getting along great. It beats a hen all hollow."

It's the chicks they hatch and chicks they raise that make our customers swear by the Banta machines. Little cost, little care, make it easy and pleasant. Better write for

**THE BANTA Incubators and Brooders**

our new, **FREE** catalog. It tells all about Banta incubators and brooders. THE RANNEY AVERAGE

That's the average result of hatches figured on reports from users of the Ranney Incubator. We can give you the names of many who have obtained these results and better. Only results spell success.

Mr. J. B. Ranney for years closely studied the incubator problem and the different incubators on the market until he became thoroughly familiar with them. The result was that he has designed and patented a machine that embodies the strong points of each one and eliminates all of their defects. In addition he incorporated many exclusive features of his own. This could only result in one thing—an absolutely perfect incubator. The Ranney is the modern success.

The Ranney Incubator is the only machine having adjustable ventilation that makes it equally successful in any climate or locality—mountainous or swampy.

It has 3-inch walls all around, insulated with mineral wool and dead air space—it is absolutely cold-proof, even in zero temperature. The fresh air inlet is at the bottom of the case, not at the lamp, as in most machines. Hence the fresh air is never devitalized or fouled by fumes of oil. The Ranney is the only machine having detachable legs—you can set it up by tapping them in with a hammer, in a minute.

Our new catalogue, describing fully every detail, will be gladly sent you upon request. Brooders and all sorts of Poultry Supplies, always in stock. We give an ironclad money-back guarantee with the Ranney. (You take no risk).

FREE—Valuable 48-page book "Poultry Diseases and Useful Information." (Usually sells for 25c). Send 2c stamp for postage.

Volume 38.

Chicago, Ill., February, 1907.

No. 2.

THE MATING OF THE BREEDS.

The Merits and Shortcomings of America's Most Attractive Exhibition Fowl, the Buff Cochin—Some of the Reasons Why the "Fowl Which the Whole World Wants" Has Steadily Lost Ground in the Exhibition Room and in the Yards of the Masses of Poultry Raisers—H. N. Hanchett Tells How to Properly Mate and Handle the Breed So As to Produce the Desirable Exhibition and Breeding Specimens.

Paper No. 2—The Buff Cochin.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

Despite its greatly lessened numbers, both in the show room and breeding yard, the Buff Cochin retains the distinction of being America's most attractive exhibition fowl. The full-feathered Buff Cochin is unapproached in beauty and grandeur, grace and pleasing repose. Those who contend that no Standard breed or variety of fowls should be hampered with color disqualifications point with pride to the Buff Cochin, which, during the more than fifty years of its existence, has not been thus handicapped. The original Standard makers, and those who from time to time have revised the work, have not been as exacting with this breed as they have with all others, and have left the Buff Cochin Standard free from color disqualification. Yet the Buff Cochin today is the best colored of all buff breeds or varieties. A very large per cent of Buff Cochins come true to color, and it is that even, clear orange buff so much desired by all breeders of buff fowls.

It is within the memory of many fanciers now living that the Buff Cochin was the "fowl the world wanted." There have been, in modern times, several booms which have swept the country from end to end, but they have been as the summer's evening breeze compared with the whirlwind the Buff Cochin created throughout America, England, France and Germany not so very long ago.

Today in a large majority of American shows the stately and beautiful Buff Cochin is not seen. In the larger and more important exhibits the class barely fills, and often falling short. And still this breed is better today, as complying with Standard requirements, than it has ever been. This is the seemingly dual position of the Buff Cochin of today.

He who has not closely followed the progress of the Standard-bred poultry industry in this country and England during the past twenty-five years may be excused if he asks why this beautiful and strikingly attractive fowl has thus lost prestige—why the breed which once stirred the world and filled the cages in all poultry shows is now rarely seen in the exhibition halls.

An answer to this most natural question can be easily made: It is because the full-feathered Buff Cochin, as bred today and for the past fifteen or twenty years, has not proven profitable as a utility fowl in the hands of the masses; the cottagers and the farmers have been unable to handle this breed with profit, and it has been displaced largely by the American breeds.

This being a fact, the Buff Cochin is today largely in the hands of the fanciers, and some of America's most skillful and prominent fanciers are giving their undivided attention to the breed, drawing it nearer to the Standard requirements every year and, most of them, caring little or nothing as

to the utility qualities of their favorites. And yet we find occasionally a fancier who is making a record with his Buff Cochins equal to the best given us by the strictly utility breeds. We will not attempt to go into details for the purpose of ascertaining whether the nonproductiveness of the Cochin in the hands of the masses—the many keepers of fowls for eggs and table use—lies with the Cochin itself or is due to mismanagement of the people. We simply take the record as we find it.

There are no other fowls shown today so clearly approaching Standard perfection as the Buff Cochins exhibited at the larger shows. They are the highest type of the product of the fanciers. It has taken years of hard and patient work to produce this marvelously beautiful fowl, yet it is well worth the effort. To take from American poultry the Buff Cochin would be to rob it of one of its most interesting, valuable, attractive and altogether pleasing breeds. May the earnest men and women who have given the world the perfected Cochin continue to hold fast to the idea of the beautiful.

How to Make Buff Cochins.

The record of achievement bears us out in the statement that no man is better qualified to give advice as how best to mate Buff Cochins so as to produce exhibition and breeding stock than is Mr. H. N. Hanchett. He has given to the world some of its most valuable and perfect specimens of the breed. With him it is a labor of love. Mr. Hanchett says:

I took up the breeding of Buff Cochins with the fixed determination to produce if possible birds of true Cochin type, of larger size, with more abundant feathering, without sacrificing their practical qualities. How well I have followed this determination I leave the public to judge.

But just a word about the birds themselves. Buff Cochins are the fancier's fowl par excellence. Their rich, massive appearance, the beautiful color, the quiet, lovable disposition—who could resist the charm of this variety once he gets some choice specimens in his possession? Yet beauty is not all they have to recommend them. In yearly egg production they will be found equal to three-fourths of the breeds, and are extra good winter layers. Remember, please, that egg-production is not so much a matter of variety as the strain of that variety. Certain strains of Wyandottes, for instance, produce 250-eggs-a-year hens, while other strains of the same variety will be found about the poorest layers imaginable. We have owned a Buff Cochin hen that layed 50 eggs in 52 consecutive days. This, understand, is very exceptional, but we mention it merely to show that when proper care and method is employed in the breeding, Buff Cochins are profitable from a utility standpoint as well.

As table fowls they are among the best. The flesh is very fine in grain, tender, and of excellent flavor, and a bird of this variety never gets too old to make a toothsome stew.

Where one wishes to keep a few fowls on a city lot no breed could be more desirable. A three-foot fence will confine them, and if you want to see a beautiful sight just place a half dozen of these birds out on a green lawn.

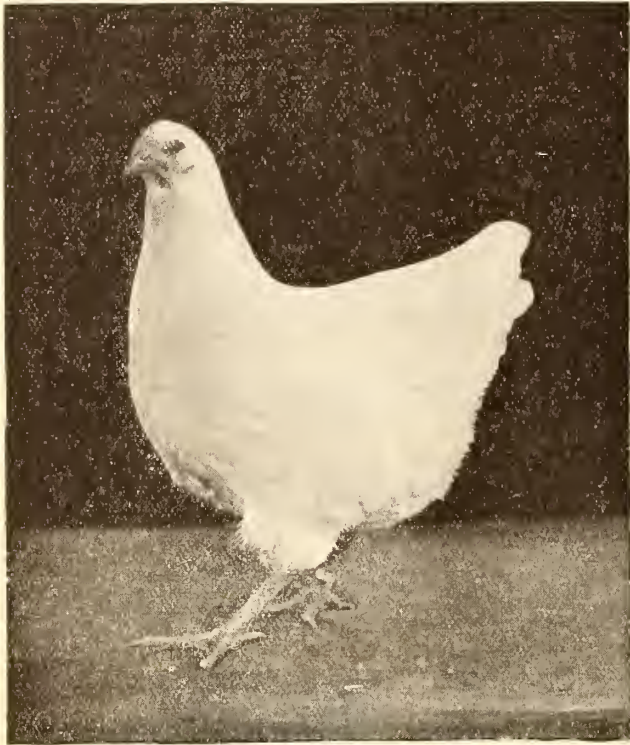

Selection of Breeding Stock.

Even where no particular method is employed in the selection of breeding birds a good bird will be found now and then, it is true, but the exception does not prove the rule, as the tendency is constantly toward reversion to the original types, and the "occasional" good bird would not have it in him to stamp his good qualities on his offspring. Hence, the importance of starting with stock from a family of fowls that have been bred up to a high degree of perfection. To the beginner I say: Buy the best stock you can afford, but

whatever you buy be sure it comes from stock of careful breeding; then you have good blood to build on and the right foundation for a flock of high-class birds.

We usually begin selecting our breeding stock in December or January, so as to have plenty of time to look them over carefully for a few weeks, removing specimens that may develop undesirable traits and replacing them with finer ones.

The important matter of size must be considered well if a breeder hopes to have birds up to standard in weight. It must be bred for the same as everything else. Reject each season all specimens that are undersized or stunted, particularly on the female side. I do not advise breeding from a male that is much over Standard weight, as such a bird is not likely to be as vigorous and therefore not as strong a breeder constitutionally as a 10-pound cockerel or a 11-pound cock. Size comes more from the female side than from the male line, so does type, while color and head points depend more on the male. The female, if up to Standard requirements in size, will increase the size of the progeny of an undersized male, but it seldom works out that way if the females are small. Of course care and feeding are important, too, as even stock bred from birds possessing large build will

Maud M., first pullet at Springfield, Ill., 1906; first Missouri State Show, 1906; first St. Louis, 1907. Winner of the Ivory Soap Special and White Plymouth Rock Club Special for best pullet. Scored 96 1/4 by Butterfield. Bred and owned by William Miller, Crescent, Mo.

deteriorate in size unless given proper nourishment toward the building of bone and muscle.

Constitution or stamina must be considered also. Now, dear reader, don't say it is foolish to consider so many things in the mating up of a pen of fowls, for years of study and experience have convinced the writer that there are many things outside the merits and defects (according to the Standard) of the birds themselves that must be reckoned with if we would secure the very best results from our matings, and this is one of them. One may be sorely tempted to retain as a breeder a bird closely approaching his ideal in type and color but plainly lacking in vitality, but it is a cold hard fact that such a bird is not apt to reproduce itself in his offspring. The bird with bright comb and visibly hardy constitution is the one that will transmit its fine points to the progeny.

Selection of the Male.

The male selected to head the breeding yard should be short and blocky and low down on legs, with full, round breast and back as short and full as possible. The big full-cushioned back, in males particularly, is hard to secure, but you can accomplish it by persistently breeding from the hens strongest in this section and gradually work it into your male line.

Another feature very important in selecting the breeding

male is shape of tail, which should be short and carried rather low. This gives the bird a shorter and blockier appearance. In carriage preference should be given to the bird that leans slightly forward, or well down in front, with the cushion well up.

As to color in the breeding male, we always use birds of medium shade, perhaps a shade darker than the color of a new gold coin. They should be even in shade and with a rich buff undercolor. Wings and tail as near solid buff as possible.

In fact, to the beginner who can make two matings we advise using in one pen a male showing a little dark in wings and tail. This will assure him plenty of good strong-colored cockerels in case the cockerels from his other mating should show some white, which is apt to occur in breeding from solid buff birds on both sides unless ancestry, stamina and all other conditions are taken into consideration when the mating is made. The male with a little dark in him will get you a good percentage of clear-winged cockerels, if well bred and properly mated, and their average excellence is likely to be higher.

Selecting the Females.

In choosing the females to go with such a male as I have described, select as large birds as possible and those blockiest in build and with the fullest, softest feathering. If possible pick birds with broad, full-cushioned backs and short tails, carried low, and deep round breasts. This latter feature quite naturally pulls the bird down and forward, giving the true Cochin carriage.

As to shade, if you have the correct color in your male select females that in color match the breast of the male closely. Avoid extremes in breeding for color; that is to say, do not mate very dark birds with very light ones, as the result is almost sure to be disappointment in the shape of very uneven individuals and an uneven flock. These females should be strong in undercolor to skin and solid buff in wings and tail if possible, though do not think that to make up a choice mating you must have all solid buff birds on both sides, for few indeed can make such a mating.

Exceptions to the Above Requirements.

A cock or hen that shows color defects, such as unevenness or light undercolor or a little black or white in wing or tail, when such specimen as a young bird was all right in color, should not necessarily be rejected from the breeding pen. An injury to a new feather just starting may cause it to come in white.

So far but few of us have been successful in breeding from solid buff birds on both sides; therefore, we say again: If you do make a mating of solid buff specimens, make another using a male of sound undercolor showing a little dark in primary wing coverts and main tail feathers to insure good cockerels, as mentioned before. The solid buff mating must be worked up to gradually; you must look well to the strength of color, be sure that both male and female are sound in undercolor, buff quills and all, and you must also be sure that no white has appeared in any of this line of birds for several generations back, which your pedigree records will show after a few years, or if you are fortunate enough to secure a pair or trio of birds from a breeder who has this carefully bred stock, you have the right kind of a start at once.

The importance of proper undercolor cannot be overestimated; we believe that as a rule it is given far too little consideration. Very dark undercolor in birds of dark shade has a tendency to produce birds with black in wings and tails. Light undercolor, unless the bird is bred from sound colored ancestry, is likely to throw white. Remember that buff is a made color and that just as soon as you succeed in getting all black out of your flock white stands ready to come in. The dividing line between the two is almost too narrow to stand on. Therefore we cannot emphasize too strongly the point of working carefully, yes slowly, toward the solid buff goal.

Grand pullets come from a mating of solid buff cockerel or even one showing a little white in wings, tails and undercolor mated with Standard colored females, but such pullets will not make good breeders.

It is true that if one leaves shape and feathering out of the proposition the perfecting of color alone is comparatively easy; but to carry all three along together is quite another matter. It is fighting three battles at once. Then, besides, there are the eye and comb, which are important sections.

It's a deep and intensely interesting study—too much for anyone to thoroughly master. We learn something new every day.

Do not get discouraged if you cannot make your first mating just as I have outlined in this article. The writer did not produce birds like those shown herewith the first

season, nor the second or third. But incorporate in your first mating as many of the features mentioned as possible. It is best to either mate in pairs or trios or use trap nests; then mark the chicks raised from each female and keep a careful record of each individual mating from season to season. "But," someone asks, "what if I am unable to find such birds as you have described in my flock?" Now we come up to the point of

Breeding Out Serious Defects.

Every breeder of many years' experience has had this to

E. C. ZOELLER, JACKSON, MICH.,
Michigan's Oldest Breeder of White Plymouth
Rocks.

content with, and we do not claim to be any exception to the rule. Here is the best way, according to our experience, to breed out some prominent defect. Let us suppose, for example, that you have a fine flock of Cochins except that they are stiff in hocks, which is a very serious defect. Select your best cockerel and, say, two of your softest feathered pullets that are otherwise good. Now go to some breeder whose strain of birds is strong in the matter of heavy soft feathering and purchase, perhaps, two of the softest feathered pullets you can. Mate these with your cockerel also, but either keep them in a separate pen or mark the eggs as laid and the chicks as hatched to distinguish one family from the other. Now from these first-year matings you will not get a very even lot of birds, for you have mated extremes, but the chances are they will be an improvement and it places you in position to make a mating the next season that will show marked progress. Now let us suppose that another season has rolled around and we are ready for the next year's matings. If the chicks from the new females produce the best general results select the best cockerel, one that shows the soft heavy feathering of the dam, mating him back to the two original females (one being his dam); then mate two or three of the best pullets back to their sire. You are now "line-breeding," which, if you have started with two good lines of blood, will enable you to show marked improvement each season and more rapidly approach your ideals than by any other plan.

Now to go back to the original pen. In case the chicks from your own trio proved much the best, mate the best and softest feathered cockerel back to your own original two females, and a marked improvement will have been made in the objectionable section.

Any of the numerous defects may be bred out in the same way. We give this detailed outline merely as an example.

While on the subject of feathering I want to call attention to a very important factor in producing soft full hocks to which little attention is paid, and that is the abundance of down or underfluff. If you will select as breeders the birds showing the most of this soft down in all sections the improvement in hocks will be very noticeable. A little study of the nature of the different feathers will make this easily understood. Take, for example, the stiff wing or tail feathers, there is no down on them to speak of. On the other

hand, look at the fluff feathers of a modern Buff Cochin and you find that they are almost nothing but down. You will see, therefore, that by selecting the birds showing the most down or underfluff, softer hocks each season must be the result.

Brother fanciers, put system into your work. This country today has all the "fair to good" birds it needs—and more, too—but there is now and will always be an active demand for the best, and this demand is certain to increase with the increase in population and wealth of the country.

It is this branch of the business (the production of the best) at which the writer has aimed from the time he purchased his first trio of Buffs. It is this branch of the business toward which we urge all readers of this article to aim and to work—whether for pleasure or profit. It is all the same, for the intense satisfaction that comes from producing something out of the ordinary is in itself one of the richest forms of profit.

"Dont's" for Buff Cochin Breeders.

Don't breed a cockerel that shows red on wing bows.

Don't breed from pullets showing white in undercolor of neck.

Don't breed from the birds that feather and develop slowly, as such birds will greatly reduce the vitality and early maturing tendency of the flock.

A Few Suggestions in Closing.

But each represents one of the little things that when all are taken together mean much.

Keep the Cochins active before and during breeding time. If preparing them for exhibition, keep them as quiet as possible.

Feed mash to your Cochins once a day, preferably at night. Mash promotes looseness of feathering.

A little sugar in the mash for late-hatched chicks will

First Prize Light Brahma Pullet at Mason City, Iowa. Bred by
Dr. N. E. Mighell, Marshalltown, Iowa.

develop them more rapidly. About a cup of sugar to three or four quarts of mash.

Separate your largest chicks from the smaller ones or the latter will not thrive. We yard the largest and give the smaller ones free range.

We clip away some of the fluff from both males and females in our breeding yards.

AMERICAN POULTRY ASSOCIATION MEETING.

Complete Reorganization of the Association, the Report of the Committee of Fourteen, Carrying With It the Adoption of a New Constitution and By-Laws, Accepted by Practically a Unanimous Vote—A National Representative Organization Thus Brought Into Being—Revised Edition of the Standard of Perfection, Containing Colored Plates, to Be Issued in 1910—The Market Side of Standard-Bred Poultry Receives Substantial and Merited Recognition—Fred L. Kimmey Chosen Election Commissioner.

(Written by Thos. F. Rigg, Associate Editor AMERICAN POULTRY JOURNAL.)

Adopted the report of the committee of fourteen, carrying with it complete reorganization of the association by the adoption of new constitution and by-laws, making the electorate of the association the full governing power, members choosing officers by ballot.

bership, every member having voice and vote in the selection of officers.

It was a representative gathering of fanciers and breeders, whose sole purpose was to enact legislation which would allow the American Poultry Association to fulfill its destiny. All so-called politics were eliminated. Personal interests and desires were set aside, and each and every member voted for what he considered best for the association and the cause it represents. These were glorious field days for the American Poultry Association.

The meeting was called to order Thursday at 10:30 a. m. by President Grant M. Curtis. Mr. Curtis reviewed at some length the history of the association. The association was organized in Buffalo, N. Y., in 1874. First show was held in Boston in 1849, next in New York City in 1854. The first poultry paper published in America was issued by the New York State Poultry Society in March, 1870. This journal lived but a short time. Today we have in the United States and Canada seventy-three journals devoted to poultry. The total poultry products of the United States amounted to \$17,000,000 in 1870. Now it amounts to more than \$500,000,000 annually. At the second meeting of the American Poultry Association in 1865 there were sixty-five members present. At but one meeting since—the Rochester meeting in 1889—has the attendance been as large. The membership of the association is now 863. Nearly one-half of this mem-

THE COMMITTEE OF FOURTEEN WHOSE REPORT WAS ADOPTED AT AUBURN, N. Y., JANUARY 10-11, 1907.

Reading from left to right, upper row: George D. Holden, Grant M. Curtis, F. D. Baerman, Theo. Hewes, H. B. Donovan, J. H. Sledd, Thomas F. Rigg, Lester Tompkins, D. Lincoln Orr. Lower row: H. V. Crawford, Fred L. Kimmey, Mr. Kimmey's grandson, and T. E. Orr.

Adopted resolution in favor of colored plate Standard of Perfection.

Resolved to an annual American Poultry Association show, in connection with some representative poultry exhibition, at which American Poultry Association medals and diplomas shall be offered; that at this meeting no legislative action of any kind whatsoever shall be taken.

Sense of the meeting that a poultry institute be held in connection with the regular annual meeting of the association.

The Standard of Perfection to be issued in revised form in 1910.

That the next regular edition of the Standard of Perfection, 1910, contain Standard for properly dressed fowls, with instructions to judges as how to judge dressed poultry, also eggs.

The thirty-first annual meeting of the American Poultry Association was held in Auburn, N. Y., January 10-11. It was the most important meeting of the association ever held. The adoption of the report of the committee of fourteen carries with it the complete and radical reorganization of the association, making it purely representative in form. Under the new order of things all officers are elected by the mem-

bership has been added during the past five years. It is no credit to us, the president held, that during the thirty-four years of the life of the association we have not made better headway. Had the membership of the association increased as it should, with the increase of population and the poultry industry, our membership would now be more than 75,000. The demand now is for a national representative organization, and this can be had by adopting and working on the report of the committee of fourteen.

Mr. Curtis urged united action and the going forward to the mountain upon which the association should properly stand.

The following named members answered to roll call:

District of Columbia—T. F. McGrew.

Illinois—Fred L. Kimmey, Miller Purvis, John Brinkama.

Iowa—Thomas F. Rigg.

Massachusetts—Lester Tompkins.

New Jersey—F. D. Baerman.

New York—Grant M. Curtis, Henry Trafford, George Peer, W. B. Wheeler, H. L. Pelton, Bruce R. Seaman, D. Lincoln Orr, A. Riddell, George Burgott, Mr. Wheeler, F. E. Dawley, F. W. Corey, J. E. Rice, C. King, M. S. Ellered, M. S. Gardner, D. Shea, H. H. Blackman, J. H. Santee, Mr. Gelkins, George Farniss, J. H. Scott.

Missouri—C. A. Morton, Ross C. H. Hallock.

Michigan—F. L. Sewell.

Ohio—C. M. Emerson.

Pennsylvania—F. Cook, T. E. Orr, H. A. McAleer.

West Virginia—H. Atwood.

Elmira Poultry Association—M. P. Reynolds.

American White Plymouth Rock Club—F. W. Corey.

Kentucky State Poultry Association—C. A. Morton.

American Plymouth Rock Club and American Silver-Laced Wyandotte Club—C. A. Morton.

American Buff Wyandotte Club—J. H. Scott.

Indiana Fanciers' Association—Theo. Hewes.

Auburn Fanciers' Association—J. H. Scott.

On motion of J. H. Santee the chair appointed a committee on credentials consisting of J. H. Santee, T. E. Orr and F. L. Kimmey.

T. F. McGrew moved that the reading of the minutes of the previous meeting be dispensed with.

F. D. Baerman objected.

After some discussion George Peer moved the previous question and the motion of Mr. McGrew carried.

On motion of Mr. Kimmey the bound copy of the proceedings of the last meeting, as compiled and issued by the secretary, was made the official report of the proceedings of said meeting.

Adjourned to meet at 1:30 p. m.

Thursday Afternoon Session.

Met pursuant to adjournment, Grant M. Curtis presiding.

The report of Secretary-Treasurer T. E. Orr showed that during the period covered since last report the association had received \$15,479.80. Have on hand \$6,000 drawing 4 per cent interest, and \$850 in current funds. Report accepted and adopted.

On motion of George Peer, seconded by Theo. Hewes, the general meeting adjourned and the executive committee met, voting in the following new members:

Associate—Auburn Fanciers' Association, Auburn, N. Y.; Ohio Valley Poultry Association; New York Poultry, Pigeon and Pet Stock Association; Cleveland Fanciers' Club, and Hartford (Conn.) Poultry Association.

Life—E. E. Winchell, Hartford, N. Y.; J. H. Hallock, Hartford, N. Y.; A. O. Schilling, Rochester, N. Y.; D. N. Honlow, Hartford, Conn.; R. L. Hutchins, New York, N. Y.; William Miller, Crescent, Mo.; Robert Slocumb, Washington, D. C.; J. D. Jaquerier, Watervliet, N. Y.; J. H. Harrison, Iion, N. Y.; J. H. Leonard, Iona, N. Y.; A. E. Hamilton, Angola, Ind.; I. A. Freeman, LaGrange, Ohio; Joe Coleman, Belleville, Ohio; Seth Greer, Tacoma, Wash.; Elmer Dixon, Oregon City, Ore.; George M. Benham, Canandaigua, N. Y.; Henry Durr, Tacoma, Wash.; Theo. Faulstich, Dayton, Ohio; Albert F. Dikeman, South Peabody, Mass.; F. O. Megargee, Scranton, Pa.; F. B. Gibson, Elizabeth, W. Va.; D. D. Slade, Lexington, Ky.; George Fox, Torresdale, Pa.; Reese V. Hicks, Madisonville, Tenn.; J. L. Anderson, Seattle, Wash.; Chas K. Graham, Storrs, Conn.; James L. Nix, Homer City, Pa.; A. L. R. Mantz, San Jose, Cal.; C. D. Minton, Salem, Ore.; Percy A. Cook, Scotch Plains, N. J.; P. D. Lawry, Ithaca, N. Y.; S. W. Crosby, Newton Falls, Ohio; B. C. Thornton, Short Hills, N. J.; Charles McAlester, Seattle, Wash.; James Carfeman, Leipsie, Ohio; B. C. Fineche, Short Hills, N. J.; M. Andersen, Seattle, Wash.; A. F. Kummer, Butler, Pa.; T. C. Hubbell, Ellisburg, Wash.; George C. Eaton, Norwich, N. Y.

The executive committee adjourned. General meeting called to order by the president.

Dr. Santee presented a majority report of the committee on credentials to the effect that the votes held by F. W. Corey and others as representatives of units of specialty clubs be denied.

T. E. Orr offered a minority report that their votes be allowed.

This brought to issue the question as to whether the law of the association allowed a member to record one vote as representative of a club and additional votes of one for each five members of a club.

Mr. Kimmey and Mr. Santee spoke in support of their report.

The majority report was held to be wrong by Miller Purvis, F. D. Baerman, T. E. Orr and D. Lincoln Orr.

The majority report was adopted.

F. L. Kimmey, chairman of the committee of fourteen, submitted the findings of the committee, the proposed consti-

tution and by-laws, and moved their adoption, the report being read by D. Lincoln Orr.

Thomas F. Rigg seconded the motion of F. L. Kimmey.

F. D. Baerman presented a minority report, signed and supported by himself only. He offered it as a substitute for the majority report.

The Chair held that the contents of the report were not germane to the subject matter of majority report and ruled that he could not accept same.

Mr. Baerman appealed from the decision of the Chair. The Chair was sustained, Mr. Baerman being alone in voting in the affirmative.

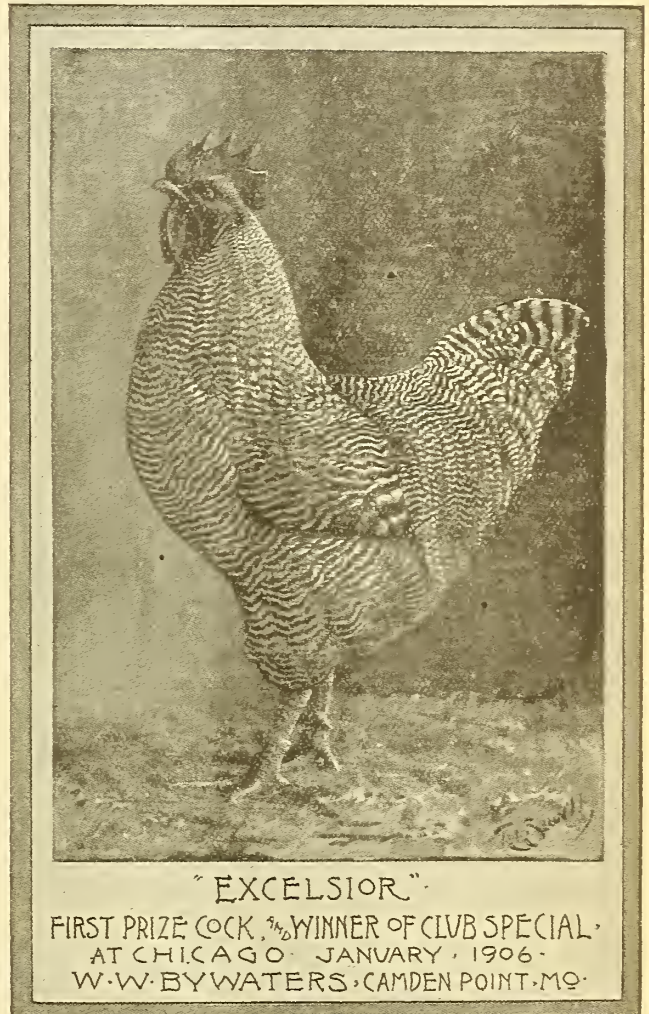

The report of the committee was accepted and adopted, there being but four votes in the negative.

Adjourned until 7:30 p. m. on motion of T. F. McGrew.

Thursday Evening Session.

Met pursuant to adjournment, president presiding.

C. M. Emerson urged that the association adopt an emblem which could be worn by each member, something which all

The above Barred Rock male, "Excelsior," winner of the blue ribbon at the 1906 Chicago exhibition, was one of the best males of this variety we have had the pleasure of handling. He had the narrow, straight barring so much to be desired and the bars were of equal width. We congratulate W. W. Bywaters, Camden Point, Mo., on being able to breed such an extraordinary male and also on the many other high-class Barred Rocks on exhibition at that show.—F. L. SEWELL.

would prize and be proud to possess. He moved that a committee of three be appointed to report to the executive board as to a design of same. Carried. The Chair appointed C. M. Emerson, F. L. Sewell and Thos. F. Rigg as such committee.

The admission to the Standard of the Silver Penciled Rocks was called for on motion. Secretary Orr said all requirements had been met by those making the application for such admission.

The Chair said the motion could not be entertained. We are now working under the new constitution, which holds that no new breed or breeds can be admitted at any time other than when the Standard is revised. This will be in 1910.

The matter was referred to a committee consisting of F. L. Kimmey, Geo. Burgott and J. H. Santee.

The committee reported that the breed be accepted, but that it be not placed in the Standard till 1910. Report of the committee was adopted.

The matter of the Percy Cook alleged infringement on copyright (Standard) was referred to a committee consisting of Geo. Peer, D. Lincoln Orr and J. Y. Bicknell. The committee reported that the whole matter be referred to the executive board. Report of the committee adopted.

Adjourned to meet Friday morning at 10:30 o'clock.

Friday Morning Session.

Secretary Orr announced that application for admission to the Standard of Perfection had been made for the following breeds: White, Black and Golden Fluffs, Buff Geese, Lakenfelders, Fayerolles and B. Red Turkeys. Referred to executive board.

James E. Rice offered the following resolution and moved its adoption:

"Whereas, The poultry interests of the United States, aggregating over \$500,000,000 annually, are not receiving their just share of attention from the agricultural colleges and experiment stations; and,

"Whereas, We believe that the few efforts which have been made and are now being made to teach poultry husbandry and to help solve the difficult problems concerning poultry keeping have resulted and are resulting in great good to poultrymen generally and are therefore entitled to our support and encouragement; and,

"Whereas, Any efforts which are put forth to enable poultrymen to obtain a better knowledge of their business will redound to the general good and prosperity of all interests related thereto; and,

"Whereas, Other branches of agriculture and animal husbandry are receiving a much larger share than is poultry husbandry of the moneys appropriated by national and state governments for instruction and investigation, as has been shown at this meeting by indisputable figures; and,

"Whereas, The amount of money thus appropriated, other things being equal, should be in direct proportion to the extent to which the industries contribute to the wealth and prosperity of the state or nation; and,

"Whereas, Poultry husbandry, old as an art, but new as a science, and therefore little understood, is in need of even greater financial support; therefore, be it

"Resolved, That a permanent committee on 'education and experimentation in poultry husbandry' be established, and that on such committee three members of the American Poultry Association be appointed at this meeting by the president to formulate a report on the condition of education and experimentation in poultry husbandry in the United States and Canada to present to the association at the earliest possible date, not later than February 1, 1907, and at each annual meeting thereafter, a written report embodying its findings and recommendations, this report to include a statement of the values of the principal agricultural products in each of the states and provinces, together with the amounts of money expended for instruction and investigation in these respective branches of agriculture in the various states and provinces, together with any further information or recommendations pertinent to the subject; and be it further

"Resolved, That the executive board be empowered to publish and distribute this report to each member of the association, the officers of each of the agricultural colleges and experiment stations in the United States and Canada, and to all papers and periodicals interested in poultry husbandry."

The chair appointed upon the adoption of the resolution the following named gentlemen as a committee on statistics: J. E. Rice, C. K. Graham and H. Atwood.

Thos. F. Rigg offered the following resolution and moved its adoption:

"Whereas, It is among the declared objects of the American Poultry Association to encourage poultry exhibits held under the rules and regulations of this association, and to promote the interests of poultry breeders in general and of members in particular; therefore, be it

"Resolved, That the executive board be and is hereby authorized and directed to accept invitations to hold an annual American Poultry Association show in connection with poultry, pigeon and pet stock exhibitions held in different cities in the United States and Canada under rules and regulations of this association, at which American Poultry Association medals and diplomas shall be offered, and that said committee make the necessary arrangements for holding these annual exhibitions;

"Provided, That no expense shall be charged against the funds of the association further than the authorized expenses of the secretary, who shall be present in the interest of the American Poultry Association, and cost of cups, medals and diplomas to be offered as American Poultry Association specials; and be it further

"Provided, That these annual American Poultry Association shows shall be held only during the months of November, December, January and February; be it further

"Resolved, That poultry conventions or institutes shall be held in connection with these annual American Poultry Association shows, which shall be open to all poultrymen, at which addresses shall be made, papers read, with discussions and debates, the executive board of this American Poultry Association to make all arrangements for the program; and be it further

"Resolved, That no legislative action of any description shall take place at these winter meetings of the American Poultry Association."

The resolution was strongly supported by Theo. Hewes, D. Lincoln Orr, Geo. Peer, T. F. McGrew and others, and was unanimously adopted and referred to the executive board.

Theo. Hewes nominated Fred L. Kimmey for the office of election commissioner. Motion seconded by Miller Purvis.

E. G. Wyckoff nominated D. Lincoln Orr.

Mr. Orr declined to allow his name to go before the meeting, stating that the demands of his private business were such that he could not take time to perform the duties of the office should he be elected.

On motion of Theo. Hewes the secretary was instructed to cast the vote of the association for Fred L. Kimmey for election commissioner.

Secretary Orr reported that the vote had been cast as directed, and the chair announced that Fred L. Kimmey was duly elected election commissioner.

The secretary announced that he had received application for branch membership as follows: New York Branch, Washington State Branch and Long Island Branch. Referred to executive board.

Fred L. Kimmey spoke at length upon the advisability of placing colored plates in the next regular issue of the Standard of Perfection and moved that a committee of three be appointed to take up this most important work. The chair appointed Fred L. Kimmey, T. F. McGrew and Thos. F. Rigg as such a committee.

Franklin L. Sewell moved that the next regular edition of the Standard of Perfection contain cuts of properly dressed fowls and instructions to judges as to how to judge same. Motion carried, and the Chair appointed F. L. Sewell, Henry Trafford and Ross C. H. Hallock as such committee.

T. F. McGrew offered a resolution thanking the Auburn fanciers for the kindly treatment accorded the visitors. Motion adopted unanimously.

The committee of fourteen at a meeting held in Auburn the day previous to the meeting of the American Poultry Association thus strengthened the safety of the ballots of members, adding these two sections to the article describing the duties of the election commissioner, the same being incorporated in the report offered by Mr. Kimmey for the committee and read by D. Lincoln Orr:

"Section 45. The opening, counting and recording of election ballots shall take place at a specified place and hour, which place and hour shall be announced by the election commissioner in the printed notice that is to be enclosed by him with each ballot mailed to all members, and each candidate shall have the right to be present in person or by accredited representative to witness opening, counting and recording of all ballots, and each candidate or his representative shall be furnished a report of all votes cast, as opened, counted and recorded in his presence; provided, that should one or more candidates not be present at the place and time specified, this shall not postpone or delay the opening, counting and recording of the votes as thus provided for.

"Section 46. The board of review shall furnish the secretary-treasurer a report of the names of all members whose votes have been received and counted at each election, specifying the office which each voter cast his vote to fill. If any votes (or vote) are not counted by said board the names (or name) of these voters shall be made a separate part of such report, with the explanation of why these votes (or vote) were not counted, and the secretary-treasurer shall include this report in full in the official proceedings of the meeting at which the findings of the board of review are received and acted upon."

Adjourned.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Mrs. Jessie E. Andrews, Kirk, Colo., and the second prize to E. E. Lawrence, Spafford, N. Y.

MAKE YOUR FOWLS TAME.

Now, I think this is a very important duty, which is too often neglected by the farmer especially. He perhaps has a nice flock of well-bred fowls, or, in fact, pure-bred birds, which are very valuable and also beautiful, but so wild that you have to slip cautiously around to get a very little glimpse at them. Then when the poor birds had heard the sound of some approaching footsteps they raised their heads, cackled and ran as though they thought themselves to be the victims of some Christmas or New Year's feast. Now, why should they do this? Simply because sometime preceding the occurrence just mentioned some member of the family has perhaps frightened the fowls by shooting into the flock or by becoming vexed at some of them has thrown at them to frighten them away from something they did not want disturbed.

Of course, the farmer who, having not dealt very extensively in the poultry business, may not have yards fixed conveniently enough to keep the birds from destroying such as vegetation when they are allowed free range. But I think it would be much more profitable for him to keep his fowls tame by merely fencing such things and avoid frightening them as much as possible, for it is a great mistake to treat them in such a manner that they may become wild. The wild animals of the forest—for instance, the squirrel—will become very tame if gently handled, but on being frightened at different intervals will become quite the reverse.

The domestic fowl is gentle by nature, and if taken when but a small chick and handled gently and affectionately until grown it will remain so. I should like to ask a question here: Why cannot the affections of a fowl be gained the same as that of a colt or lamb, and if thus received why will they not try to please their master in the same manner as that of the animal? Then why will they not do more for you and why will you not be more successful with your poultry raising if your fowls regard you in this manner than if they try to avoid your presence? Now I believe this is why the fancier and extensive poultry raiser receives a greater income from the same number of fowls than most farmers do, simply because he keeps his poultry quiet in disposition and nature, and he treats them more in the same manner as the farmer does his animals.

Now to gently place into the belief of some of readers that it is much pleasanter for the fowl to receive your kindly attentions and that they enjoy being noticed and caressed in the same manner as does the horse, which we all know is one of the most affectionate of all animals: I will here take the time to relate a small incident which occurred between myself and some of my pullets a few days since. I have fifty-one Barred Rock pullets, of which I am very proud; and it seems that they certainly know it from the way they seem to enjoy having myself come into their midst and admire their beauty. I walked into one of their coops some time ago and finding some of my beauties upon their nests, I walked up to them, as I always make it a practice to do so, stroking their glossy feathers and saying a few kind words to them; then on leaving the first one she perched herself upon the edge of the nest and began singing merrily as could be; another turned her uplifted head in my direction with a continuous chatter of her own language, and still another would chatter away while I was nearest the nest. Then on my moving farther from her she would raise her musical voice up to a much higher note until I should advance nearer to her again; then she would continue in the same low tone as before.

Now as all had been perfectly quiet before I made my appearance inside the coop, and this was their only way of drawing my attention and making me welcome, it seemed that those birds were trying to tell me in their own language that they were enjoying my presence. It seemed as though they thought themselves to be pleasing me, and, as they undoubtedly were, this caused a greater interest to develop between myself and the birds, and it is quite true that one is more sure of success in a business where their interests are great.

When the hen is gentle we can handle her at will, and instead of her jumping and squalling, trying to get loose and perhaps scratching your hands with her long nails, or in the first place not letting you get a hold on her at all, she will remain perfectly quiet and will not frighten the rest of the fowls with her fierce frightening cries. Then again it is often the case that on the farm the mother hen is given a large brood of chicks to care for, and I have

WHITE WYANDOTTE MALE.

Bred and owned by Edward E. Ling, South Portland, Maine.

always noticed that the quiet, gentle hen is selected and given the brood in preference to the wild one. Now, why do we not have them all quiet; it is quite an easy matter to do so by simply treating them all kind and gentle, and with good and regular care; and also by handling them often that they may see there is affection existing from their master for them as well as for the animals about the farm.

Now I will say to these of you who have poultry that is wild, just try taming them, and see if it is not a great deal pleasanter to work with your poultry. Try plans of gaining their friendship by going among them quietly and often, and I am sure that at the end of this year you will find that your success has been far greater and that your poultry work has been much more of a pleasure than ever before.

HOW TO GET AND GROW STRONG CHICKS.

It is not too early to prepare and have everything ready for the new crop of chickens; in fact, some are already at it and getting busy every day.

In order to have the young chicks thrive, especially early

in the season, it is necessary to have the breeding stock in a strong, healthy condition; therefore it is important to take all the care possible in wintering and selecting the breeders.

In making up your breeding pens pick out all the active, vigorous females, choosing two-year-old hens to mate with a one-year-old male bird. Use the other females for setting.

After mating up the pens, feed to nourish and strengthen the birds, but in no case try to overstimulate them or force heavy laying.

Careful feeding, with plenty of exercise and free range when possible, will insure strong fertility and vigorous chicks.

Having natural strength in the chicks to build upon, it is an easy matter to grow them up profitably. We rarely lose 15 per cent.

We use hens exclusively for hatching and brooding chickens. There is no better mother for a brood of chicks than a hen if she is of the right kind.

We manage to set from four to ten hens at a time, testing out the infertile eggs as soon as possible and resetting a part of the hens when necessary. In this way each hen can be given a good brood when the chicks are hatched and the other hens may be reset or broken up. I have known many persons to give twenty-five chicks to one hen. This is wrong. Twelve to fifteen chicks are a plenty and we have had the best success when the smaller number were given. Too large a number overtaxes the mother hen and quite a number get chilled or sicken and die, so all stand a poorer chance and do not make the growth they should.

Do not be in a hurry to move the little chicks from the nest and disturb them as little as possible while hatching; but as soon as the chicks become restless and try to climb out of the nest move the hen and her brood to a good, roomy coop; give them plenty of water and grit but no food for twelve to twenty-four hours, although it is well to feed the hen some whole corn, as this keeps her contented to brood the chicks.

Our coops for early chicks are put under cover, either in some barn or colony house, and the coop is set up eighteen inches from the floor on legs, and a small yard is set in front of the coop on legs for the little chicks to run and feed in for a week or so.

As soon as the weather will permit we move the hen and chicks to a fresh coop outdoors and give them their liberty to roam where they please after a few days' confinement to get them used to their new home so they will return nights. Some people confine a hen and her chicks to the coop for weeks. We think this is a mistake, for they will do much better to have their liberty after the first week if possible.

Of course, one must keep a sharp lookout for varmints when the chicks are running at large, but the right kind of a hen will protect her brood against most enemies. We have had them fight off crows, rats and even cats. It is important to keep coops clean and chicks free from lice, for the first few weeks at least. All the time would be better, but remember the first half of a chicken's life is the most important and requires the most care.

Spafford, N. Y.

PROFIT IN SMALL BREEDS.

The question as to which is the best breed of fowls to keep for profit, has so many times been asked, and answered, in the only way such a question could be answered, that it is unnecessary to dwell on that subject to any great extent.

We all have our favorites, and by sticking to the breed that best suits our particular fancy and conditions, our chances for success will be greatly increased. But there is one item which is very seldom taken into consideration by the average poultryman when comparing the profits of the different breeds, and which plays a very important part when figuring the balance on the credit side of the ledger, and that is, the amount of food consumed, to produce a given value in eggs.

I am speaking now from the standpoint of egg production, for I believe, and I am not alone in this belief, either, that the greatest profits are in this branch of the poultry industry.

Some writers advocate this or that breed, as they will produce more winter eggs, when they are selling high.

This is all very true so far as it goes. But my fellow poultryman, do not be led to believe that hens of any breed will lay in winter, as they do in summer, as some

writers would have us believe, even though every condition be made most favorable.

If it were possible to make hens lay in winter as in summer, then the winter eggs would be worth no more than summer eggs. Neither would there be any demand for summer eggs for packing, which always stimulates the summer markets.

The largest profits do not always lie in the greatest amount of money obtained for an article; the cost of production affecting the net gain very materially.

Now I think no one will dispute me, when I say it will require nearly double the amount of feed to keep a flock of hens weighing from six to ten pounds each, than would be required to keep the same number weighing say three and one-half or four pounds each, and at the same time these smaller breeds cannot be excelled when it comes to shelling out eggs.

Another point in favor of the smaller breeds is that less room is required, both in the pen and in the yard. And a larger number can be kept on the same area. The Hamburg has always been my favorite, and they are certainly the lightest feeders and greatest hustlers, of any breed that have ever come under my observation. And they combine beauty and egg production to a marked degree, having long been known as "everlasting layers."

If you are already established in the poultry business, and are satisfied with the breed you have, do not change; stick to them, resolved to give them a little better care in the future, and success will be yours.

But if you are just about to begin, with a view to egg production, try some one of the smaller breeds; and I believe at the end of the year, when you come to balance up receipts and expenditures, that the results will not prove disappointing.

Will L. Clark.

Sullivan, O.

FERTILITY OF EGGS.

How to Produce Eggs that are Strongly Fertile and Full of Vitality—How and What to Feed the Fowls in the Breeding Pens—The Proper Care of Eggs to be Used for Incubation.

Written for American Poultry Journal by Rev. C. E. Peterson, Penbrooke, Maine

The month of February is the month in which most of the breeders for next season's work are selected and mated.

In fact the selection has gone on for some time, as every man who knows which is which and has an eye for the promising young birds, will by this time know pretty near what he intends to do.

The fertility of the eggs from each pen mated is, of course, of great moment, and therefore we will give this matter our first consideration, for however good the birds may be in feather they cannot reproduce themselves except the eggs are full of vitality, for the vitality in the germ is the foundation strength of the growing stock, and the beginning of all successful life both in man and animal.

Now the fertility of eggs depends chiefly on two conditions being observed and neither one can be disregarded: the stock birds must be in good health and the number of females allowed to each male not more than he can manage and keep himself in sexual vigor.

The number of hens that any cock-bird may be allowed naturally depends upon the age and vigorous propensities of the bird, and whether he is on free range or confinement, whether he is of an active or slow dispositioned breed, and the time of the year in which he is mated to his companions.

For instance, a Leghorn male will very frequently give proper attention to fifteen females in a fair-sized pen where a Cochin would often times produce a number of infertile eggs mated to the half of that number, and if the Leghorn was on a free range when spring opens up he would manage from twenty to thirty without the slightest trouble.

To give an exact number for any breed is worse than useless and misleading, but as most of our matings are made up for best results, both as to fertility and strength of the product hatched from the eggs, much must depend on observation, for it is pretty nearly as bad to undermate as to overmate, for in the first case a strong male bird will worry the females till he gets them down on the legs, and in the second instance he will weaken himself.

It is not often mentioned that a male may run with fifty females and yet a good proportion of the eggs will be fertile, because he will only give attention to the few hens in the

flock that are productive, and the hens themselves will keep out of his way.

Now why I mention this is because oftentimes the small breeder has only one splendid male bird, and he would like to mate him to as many females as possible and get as many fertile eggs as he can get.

Now early in the season it is not likely that all the females will be laying, but that they will come on, as is always the case, little by little, and at this time it will cause no trouble if a strong male is mated to a greater number of females than is usual, as his attentions will only be given to the layers.

If the whole flock is shelling out as fast as they can this course cannot be followed, but that is rather the exception than the rule during the months of February and March.

As to health the birds must be in the full possession of it, as no results can be expected where the breeding stock lacks in this respect. The females should be in a good active condition, in good flesh, but not in fat; a flock of over-fed lazy hens will not be likely to benefit the egg basket, and after having taken on a surplus of fatty matter it is hard to get rid of, as it will cause inactivity, which is sure death to the successful establishment of the breeding pen.

Some of the smaller breeds do not get fat, never mind how much is fed them, their active disposition will hinder that condition, but all the larger breeds, including all the American varieties, will fatten easily if over-fed, and as a consequence become useless as breeders. When the stock is in full lay they will not fatten readily if the proper food is given them. The period which needs the most care in this respect is when the stock is ready to lay, yet lingers and sings, as pullet will for some time several weeks before she drops the first egg.

Too much attention cannot be given to the matter of plenty of good water and green food. I believe that not only the number of eggs laid, but the fertility of them, largely depends on providing well for them in this respect, and observations shows up how important this matter is.

The largest egg yield is given us early in the spring when the snow leaves and the grass becomes green and tender. Now all we have to do is to watch our birds, and we will find that they will leave their usual rations and fill themselves full with the first spears of the growing grass, which simply shows that their system craves this food more than any other, however good it may be.

Now green food can be provided early in the season by getting the snow off the ground in some southern exposure, and there are a number of succulent vegetables that will provide green food most all winter, and enough to supply a few breeding pens with plenty.

Cabbage is not too dear at any price, as it provides well the craving of nature for green food, and there are none better. A few apples will be relished and provide a change. Beets, turnips, carrots, in fact everything in the way of eatable roots will answer, but the green leaf of the cabbage and the early spears of the grass is most preferred.

Soft food we deprecate in the breeding pen. It is not conducive to exercise and impairs digestion more or less, and is a means of forcing for eggs, which, of course, should never be done where the eggs are to be used for hatching. A natural coming into laying by the females will when they get started induce a steady supply, and they will be strongly fertile, with a germ that has a kick in it, and which will produce a chick that comes into the world with a good intention to live and begin life without that tired feeling that generally ends fatally. A few words here may not be out of harmony with our subject, namely, the proper care of eggs to be used for incubation.

Much complaint is heard every season from persons buying eggs for hatching that they have had very poor results, or none at all, which is generally the cause of improper care of the eggs, if previous condition of the stock is all right.

A suitable place should be selected, not too warm and not too cold. If very warm during the day and very cold at night is the conditions under which the eggs for hatching are kept the result most likely will be addled eggs when put under the hen or in the incubator.

An even temperature of from 40 to 50 degrees is the most suitable in which to store eggs for any length of time that are to be used for hatching.

And if early in the season eggs should be collected often, in fact before they turn cold, as they chill easily early in the season when it is still freezing weather.

Every year we have marked eggs that were very cold to the touch with a C, which stood for chilled, and up to date none of them, though the germ would start, ever produced a chick at hatching time.

The practice of continually turning eggs that are to be used for incubation we consider useless. It simply disarranges the contents of the egg and injures the fine membranes of its composition. We have discarded this useless and positively harmful way, so long believed to be necessary, like a lot of other foolish superstitions prevalent among poultrymen.

Handle the eggs carefully and place a cloth over them, which will hinder evaporation, and leave them alone.

Before leaving this matter it more than likely will be said by some that the hen turns the eggs every time she lays one. She does no such thing; she will go on the nest very carefully, lay her egg and leave the nest without hardly disarranging an egg. It is only when she is incubating the eggs, when the germ has started, that she turns them. We have already hinted that close housing is not desirable, even though in some parts of the country cold weather persists during February and March. Give an abundance of fresh air, but remember that fresh air is not drafts going from one end of the house to the other.

A yard of strong vigorous birds will want to get out on the coldest day, and they will do very much better for it. Coddling is not conducive to strong fertility, as all it does is to engender laziness, and this last is simply the beginning of the end, the end of eggs in any great numbers, and those gotten will not produce strong chicks.

A hen which has no more ambition than to stand around and shiver with her feathers on end when she ought to be scratching ought to be taken out of the pen and kept for herself, and given no other food then she will dig good and hard to get, and this treatment will reduce the flesh, or fat I should say, and generally succeeds in making a hustler out of a good for nothing, and yet the hen is not always to blame, for they are very much like humanity, in getting as much as they can and for as little labor as they can, and many a flock of otherwise good fowls has been made useless by over-feeding and coddling.

Open up the windows, give air, plenty of it. When you do there will be no wet walls in the poultry house, nor a lot of sneezing hens or hang-arounds, but birds that will go singing to their work, and look health and activity all over, and that means plenty of eggs, and fertile eggs, and strong chicks.

Whatever system of feeding is employed stick to it, providing it contains all the necessary nutrients for egg production, and if the hens are laying pretty well, whatever you do don't shift from one kind of feeding to another, for you will simply stop the hens from laying.

They do not take readily to a radical change of food, and though I believe in variety, this can be done by adding a little today and some other little tomorrow, but if you want to try the "dry feed plan" begin it with the chickens and not with a lot of hens, for they will not take to it readily and will certainly leave you without eggs, for a spell at least.

There are so many poultrymen so fond of trying things, but it is unwise to try anything except we try it in the right way, and when eggs are wanted for hatching, and lots of them, that certainly is not the time for experimentation.

I have said nothing about the value of egg foods and stimulants, and simply because we never use them, for whatever may be said for them as a help in the production of eggs we deprecate very much any efforts to increase egg production in the breeding yard, as to let nature have her own way there is the very best means to produce what we desire, namely, strongly fertile eggs, full of vitality.

A healthy fowl needs no stimulants, and fowls that are not in health have no business in a well-ordered breeding yard.

As to the ages of the birds, we have something to say which is of vital importance if continued success is to be maintained.

Young and immature birds are not fit to breed from. There is no power on earth that can retain the strength, size and vigor in any breed if a succession of cockerel and pullet matings is resorted to.

I always maintained that a pullet would make a fit breeder if she was hatched late in February or the first day of March the following season, that is, when she is a full year old, but pullets younger than that make poor breeders, and how frequently these little runts are used, hatched late and used early, and all the care, and all the choice feeding you may resort to will never make matters right.

Young full-sized hens, one and two years of age, will give results both as to feather and egg production which younger birds will seldom if ever do.

The same holds good to the male bird. Nothing less than a full year old, and not then, except he is well furnished with hackles and sickles, and at least a half spur, the emblems of sexual maturity.

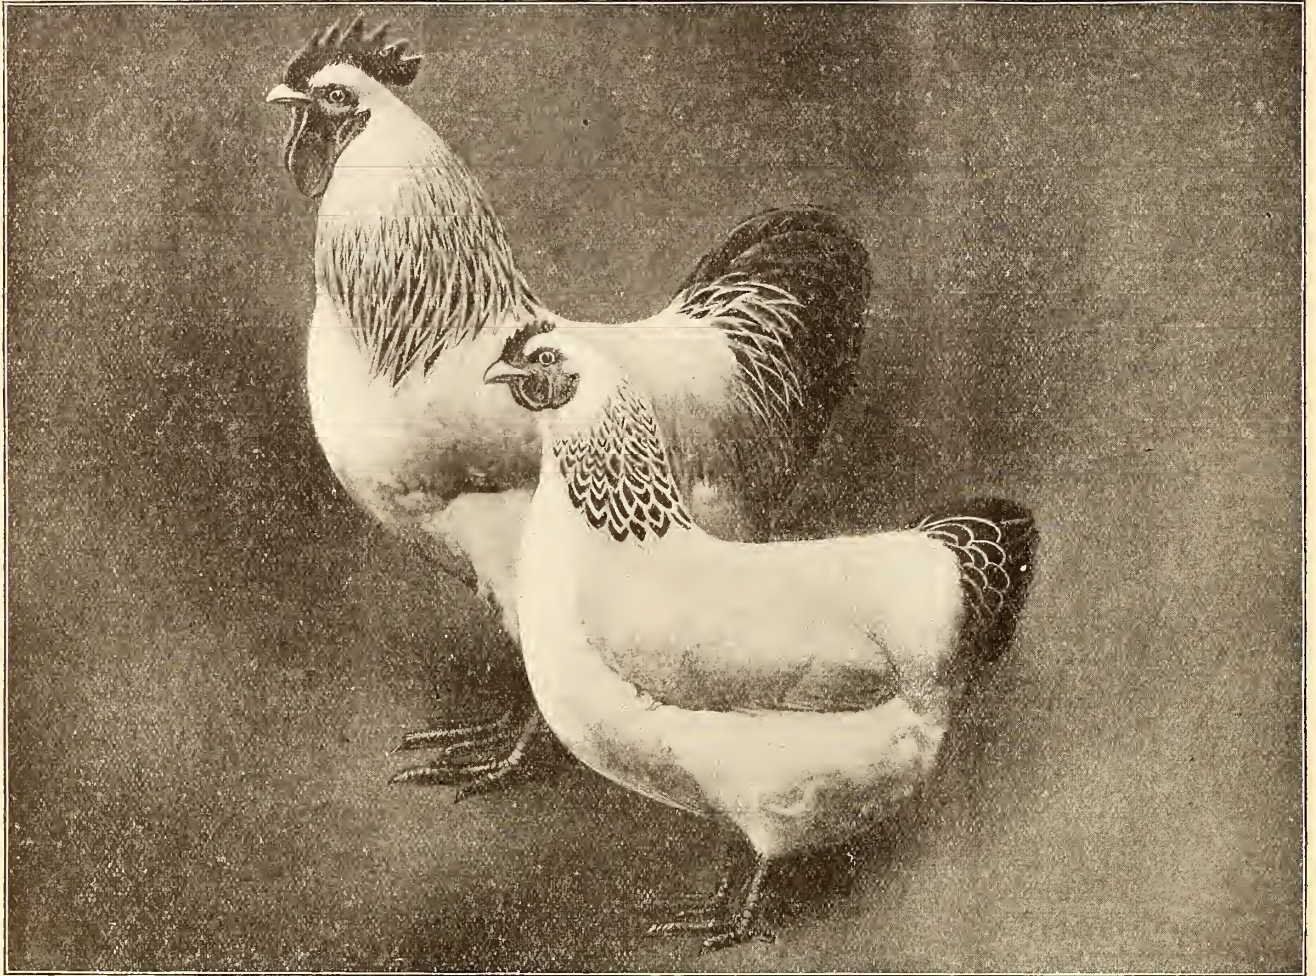

A NEW BREED OF FOWLS.

The Light Plymouth Rocks—What Breeds Were Used to Produce These Handsome Birds—The Originator of the Black Wyandotte is Now Giving His Attention to the Developing of This New Variety.

Written for American Poultry Journal by F. M. Clemans, Mechanicsburg, Ohio.

Our illustration is from a photograph of a pair of Light Plymouth Rock chicks bred by Mr. F. M. Clemans, of Mechanicsburg, Ohio. Mr. Clemans has been a fancier for twenty-five years and was once a prominent one, and a staff correspondent of the Journal. Of late years other business

Plymouth Rock, Light Brahma and Columbian Wyandotte. I am informed of two other breeders who are working along other lines to the same end, and for them and any others I wish only the best success, and would like for all to coöperate for the best interests of the breed. I think the name I have given them the most expressive that could be given and almost a description in itself. My Standard is a simple one and is as follows: All Standard requirements in all points except color of plumage to be the same as for Barred Plymouth Rocks. Color of plumage to be same as required by the Standard for Light Brahmas, except that shanks must be clear of feathers. They breed so true to points (as much so as nine-tenths of the breeds now in the Standard) that I feel justified in offering eggs for hatching this season for the first time, and do so quite confident of the best of results. By this do not infer that I claim the breed is per-

LIGHT PLYMOUTH ROCKS.

Bred and owned by F. M. Clemans, Mechanicsburg, Ohio.

interests have prevented his being active in the fancy, but he has always kept some fine fowls, enjoyed experimenting with crosses and read the poultry journals. A genuine fancier is always a fancier. He was an early breeder of Wyandottes and originated the Black Wyandotte—an excellent breed, but handicapped by its color. If we are not much mistaken Mr. Clemans now has a candidate that will be “heard from” and that in years to come will be one of the most popular of the American class. Why do we predict this? For the reason that, as its name indicates, it combines the beautiful plumage of the Light Brahma with the smooth shank, quick growth, medium size, single comb and practical market quality of the Barred Plymouth Rock. There are thousands of fanciers who will place the old Light Brahma at the head of all breeds in beauty of plumage. There are few who will honestly place any breed ahead of the Barred Rock as a practical money-making fowl. If these two desired characteristics can be found combined in the new Light Plymouth Rock the foundation for our prediction seems sound. Regarding the blood lines, etc., Mr. Clemans writes as follows: “I have used the blood of the Barred

feeted, as there is ample room for the fanciers’ art, but it gives me great pleasure to show yard visitors the uniformly clean, yellow legs, neat Rock combs, strong markings in hackles and flights, neat lacing in tail coverts, and generally true Rock style already at hand on which to build a breed with a promising future.”

Always make it a point to warm up the brooder several days before wanted for the newly hatched chicks—a week before, if possible. This will give time enough to note how much, if any, outside changes in temperature affect the temperature in the brooder. Too much care cannot be exercised in this particular. Irregularity in the temperature of the brooder is almost certain to work havoc.

Look out for cracks in the walls near the roosts. Cold breezes are likely to give you cases of head colds or roup. Canker appears in some instances.

The purchaser of early eggs for hatching should not expect a large percentage of fertility.

MATING RHODE ISLAND REDS.

A Lesson in the Breeding of Rhode Island Reds, for the Benefit of the Amateur—"Merit" is Bringing the Rhode Island Reds into Public Favor—Difficulties to be Overcome in the Breeding of this Variety.

Written for American Poultry Journal by E. E. Beck, Hammond, Ind.

Although only recently admitted to the Standard, Rhode Island Reds are today one of our most noted breeds, and many of us Red enthusiasts believe they will in the near future rank first in public favor. Ten years ago the Reds were known only in a few of the New England States. Today there are flocks of Reds in every one of the forty-six states and in the several provinces of Canada. During the past year there have been exportations of stock and eggs to England and other lands. Now, what has caused this remarkable growth? The question is easily answered. One word only is needed, and that word is "merit."

The main purpose of this article is to give those who are beginning with Reds some information in breeding them which I have gained by six years' experience. If this information will start the amateur on the right road and will enable him to pass over easily some of the obstacles in breeding Rhode Island Reds I shall be gratified.

First of all, it should be borne in mind that all breeds, even if properly mated, will produce only a limited number of choice exhibition specimens. It is from our best birds, mated for best results, that we expect the largest number of good specimens and the fewest culls.

Among farmers a common practice of mating fowls is to let three, or four, or more roosters run with thirty, or forty, or more hens; or if the breeder lives in town he will put in his breeding pen one male with six, or eight, or ten females, and let it go at that. This is not the practice of the progressive and judicious breeder. Such a one will study carefully his breeders, individually and collectively. Care must be taken if the male has any defects or faults, that all his mates do not possess these; because if these defects or faults are not counterbalanced in mating they will be found in a worse form in the young.

In choosing the male for the select breeding pen let him be a brilliant, rich, even colored one; let there be as little contrast between the color of the hackle and wing bows as possible. He should be rich in under color, have a black or greenish black tail, and absolutely no white anywhere.

Just what is the right shade of red has ever been a contention among Red breeders and it will perhaps be some time before this question will be settled. This diversity of opinion among judges, too, keeps the exhibitor trembling until the awards have been made. For the male the Standard calls for a red "so brilliant in luster as to have a glossed appearance." Last winter at one of our largest shows in the West a bird with buff, or rather a dull, brassy surface color, was given the blue ribbon in preference to those having the shade of red described in the Standard. If we have decided on a certain shade, that shade ought to be the only one by which all the awards should be made.

By consulting prominent New England breeders and by my own experience I have learned that those brassy colored males will not do for breeders if we expect to keep our Reds red. Every year I get a good many letters from breeders who complain their females "are running light in color," "they are more like buff than red," etc., etc. To all such I say, keep plenty of black in wings and tail and use dark surface colored males for breeding purposes. Of course, do not expect to get such birds back to Standard color in a single season. Let this be done gradually.

The Standard calls for black ticking on the tips of the lower hackle feathers of the females. I find a good many females do not have this ticking. I try to correct this defect by using a male with slight lacing in the hackle. At first I was bothered a good bit with bad combs. (I breed the Rose Comb variety exclusively.) In some the spike was wanting; in others the spike was "driven in," and then I always got some single comb sports. By careful mating I have overcome these defects, except occasionally I get a single comb, as do all Rose Comb breeders.

Let us next consider the wing of the Rhode Island Red. This is a difficult matter to get right. Note the Standard: "Primaries, lower web black, upper web red; secondaries, lower web red, upper web black; flight coverts black." I find a good many specimens with scarcely any black in wing flights, while others have that detestable white. I do

not know whether this white can be bred out or not. Certainly not if breeders continue to use birds having this defect. A good Rhode Island Red wing is certainly a thing of beauty; and when the budding fancier has mastered this point in breeding Reds he is well along on the road to success.

The Standard calls for a red eye. This is easy to get, and it shows careless breeding to have a breeder send out a bird with "fish" or hazel colored eyes. Feathered shanks are harder to get rid of, as this Cochon characteristic crops out in a good many specimens. White on earlobes is a characteristic inherited from the Leghorn, but it is easily eliminated by careful mating. I like to see rich, yellow shanks, with plenty of red pigment down the sides of those of the male.

The reader will note so far I have confined myself largely to color and feather markings, but shape is quite important in a Red. It is one of the distinguishing features, and the breeder should see that the birds of his breeding pen have long straight backs and full deep breasts. Reds should have length, breadth and depth.

Now that the best male and three, or four, or five of the choicest females of the flock are in the breeding pen, properly mated, remember there are other things of as much importance as mating if good results are to be secured. The birds must be healthy and vigorous, so that the eggs will contain strong germs. Exercise and right kind of food and care are necessary. In short, the birds should not be de-

First prize R. C. R. I. Red cockerel at Indianapolis, Ind., 1906. Bred, owned and exhibited by E. E. Beck, Hammond, Ind.

prived of anything that will add to their comfort and thrift.

While as a fancier's foll the Reds have made rapid strides in recent years, there is yet much to be done before this grand breed reaches that degree of perfection its friends are striving to attain for it; but in time the goal will be reached in the same way that other improvements have been made, namely, by careful and systematic mating.

EGGS IN WINTER.

The popular subject of conversation among country folk, or at least among women folk in the country at this season of the year is poultry and eggs. A few days ago I heard the following:

"Do you get any eggs these days?"

"Very few. Do you?"

"Not an egg. I never do in the winter. I don't expect to get any. I believe hens will lay just so long and then quit; and mine laid right well all summer and reckon I oughtn't to expect them to lay all the time."

"No, I suppose not, but I do wish mine would lay while the price is up and quit when eggs are cheap in the summer."

How I do long to tell them a thing or two about chickens, and advise them to subscribe at once for a good poultry journal so that it would be repeated over and over again

Ideal White Plymouth Rock pullet Mary E. II. Bred and owned by U. R. Fishel, Hope, Ind., the largest White Rock breeder in the world.

with variations by different poultry raisers till it should become impressed indelibly on their minds—if they had any—that it is possible to have hens lay in winter and if they do not they are not much profit. But one spoke so positively, as if she had solved the problem, and both seemed so resigned to the inevitable, and being a sort of modest creature and not very well acquainted with either, I did not venture to say a word, although notwithstanding the cold, and the deep snows we had had in Iowa there had not been a day during the winter that I had not been rewarded for my care of my hens by from one to two dozen eggs.

In one instance I was a near enough neighbor to know that the poor biddies had not had a drink all winter except what they got from puddles or the horse trough when it was not frozen solid, as it had been the greater part of the winter. In the other case the chickens were never fed, but were expected to forage for a living, which was a sort of "a feast or a famine" existence, for they ate with the hogs and got more corn than was good for them and when the "fattening hogs" were sold or killed they did not get enough.

There is nothing on the farm, or in town, either, for that matter, that pays as well for the time, money and labor expended, as chickens. It is work which is especially suitable for women, as it demands daily attention and some painstaking care in looking after the "little things," and it gives them the outdoor air and exercise which they so much need to keep them in good health, but do not get regularly unless they have some such employment.

In the first place a comfortable house is necessary. One six feet high in front and four feet at the back is about right. The kind of lumber known as "shiplap" is good enough, and a lining of tarred paper. One window in the south so the sun can shine in on days when it is too cold to let them out. A scratching pen is well worth the cost, but if one does not have that, there are on most farms sheds and barns where the chickens enjoy scratching and which answer the purpose.

If a deep snow comes a place about the sunny side of the hen house should be swept clean before the chickens are let out to feed, also a path to sheds and the feed scattered among litter of hay, straw or leaves, so they have to work for it.

Chickens will not lay unless they can get at the bare ground and get grit unless it is otherwise provided. They must also have water. It is surprising to see how much they drink in a day.

If it is freezing weather it is necessary to give them fresh water slightly warmed three times a day. If they do not have this they will eat quantities of snow, if there is snow on the ground, which causes bowel trouble.

A good feed for hens is small grain in the morning, such as oats, wheat, barley or millet, scattered in litter, such table and meat scraps and the chopped parings of vegetables at noon, as accumulate during the day, and corn in the evening just before sundown, always being sure to close the chicken house door to avoid cold winds and draughts, which are the cause of many of the diseases of poultry.

The short hay and broken bits of clover, timothy seed, etc., which can be taken from the mangers where horses and cattle eat, every few days, are very acceptable to the hens, as well as such cabbages as failed to "head," surplus beets and the like, which the wise poultry keeper always stores in the cellar for this very purpose.

"Eternal vigilance is the price" of many things besides "liberty."
Margaret Flindt.

A SUGGESTION TO THE FANCIER.

To the fancier who is now mating the pens that are to produce next season's winners, a few suggestions may be in order relative to control of color in white birds, particularly White Wyandottes and White Rocks.

It would seem a thorough knowledge of the principles of breeding, an intimate knowledge of the characteristics of the breed and a close acquaintance with each individual's ancestry, combined with a fancier's instinct and nerve, ought to be a very satisfactory equipment for success. Yet the writer's observation leads him to believe that skilled breeders often lose entire sight of the significance of some things in their matings.

The presence of ticking in the plumage of our whitest birds is always one of the most insidious and fatal difficulties to be overcome. As if to compensate for an overvirtue, the whitest plumage is often most filled with ticking.

When ticking is obviously present in the individual to be mated, such specimens the most uninitiated can see and dis-

card from the breeding pen; but the true fancier must be able to take hints at even tendencies long before they become realities.

The color pigment which produces dark feathers and ticking in white plumage in certain individuals does not at times show in plumage at all, but, nevertheless, lurks in the blood and is in reality deeply substantiated in the individual.

One of the evidences, though a minor one, of established tendencies to dark pigment in plumage, is often seen in the cuticle of the leg scales; discolorations so slight as to be easily overlooked were not the hint reinforced by suggestions in other sections.

The writer has in mind a cockerel bred from dam and sire that were both very white but badly ticked. This cockerel was superb in shape, head and legs, dead white in plumage, seemingly a phenomenon, considering his ancestry. We were congratulating ourselves upon his possibilities as a breeder.

The horn of the upper beak had a very dark line the length of one side and also same dark line in nails of one foot, seemingly a very insignificant matter. We mated him with good females, devoid of ticking and waited developments. Such a worthless lot of ticked birds we have not seen for many a day, wholly useless as breeders as far as color went. Knowing the history of previous matings, it was easy to account for our results. The defects of previous matings, held in abeyance in this individual, cropped out with redoubled energy in our last mating, following the law of least resistance. But the point is this individual cockerel had and every individual has the stamp of breeding tendencies to ticking and to every defect written in unmistakable language, if we can but read.

In the struggle for survival of the fittest, the forces in agreement were so strong as to dispell all ticking markings, leaving only in beak and nail tracings of former tendencies, which came forward again at first encouragement.

Another and I believe much more insidious hint to ticking of plumage is found in the discolorations often seen in wing quills, as viewed from the upper side.

Some of the wise ones tell us these discolorations are merely blood clots, gathered in the rib of wings. "A chemical analysis has proved this matter," a well known breeder calmly and sincerely told me a few years ago, as an explanation of this not uncommon occurrence.

If a chemist ever made an analysis of wing quills, he assuredly confused with the true discolorations an old feather vein often seen on low side of wing quills. To the writer's mind these same discolorations are the most insidious and prepotent tendencies to ticking in plumage of white birds that have ever come to his notice.

Almost invariably a slight discoloration or mark in the beak will be supported by same degree of markings in wing quills and less often in tail quills, when the general plumage is comparatively free from ticking.

In our own mind we have come to positive assurance that a white bird, having considerable such discolorations in wing quills, is useless as a breeder, however good otherwise he may be. Time and again has this matter been demonstrated from all points of vantage and in many combinations. In fact, to my mind, such markings are more to be avoided in a breeder than abundant ticking itself. For while the latter is but a characteristic acquired from a very recent ancestor, and in the individual not always fully established, the former, so to speak, is bred in the bone, a product and concentration of a long line of ancestry, and bound to insist in every mating.

The writer calls to mind a White Wyandotte male that won as cockerel and cock in Madison Square Garden two years in succession. He was a beautiful, almost ideal type of Wyandotte, dead white in every section and in shape and head a perfect dream. The reputation of the owner as a White Wyandotte breeder was largely established by this bird's super-excellence. The quills of both wings were heavily lined with dark.

The owner himself told me that for two years, as a cockerel and a cock, this magnificent bird proved wholly useless as a breeder. Although mated with clear females, not one chicken from this mating was a show possibility, in color a ruinous mass of ticking.

It takes nerve to throw out of the breeding pen a Madison Square Garden winner. It takes keen insight to see the latent tendencies of breeding. The men in this country who possess such insight and nerve can be counted on the fingers of half a hand. Superiority in breeding is rare only because superiority in man is rare.

60,000 A. P. J.'s for February, 1907.

State of Illinois, County of Cook, ss.

Chicago, Jan. 24, 1907.

J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding sixty thousand copies of the February, 1907, issue.

Subscribed and sworn to before me this 24th day of January, 1907.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

A National Representative Organization.

The legislation in the American Poultry Association at Auburn, N. Y., January 10-11, will, we believe, place the association in the position it should occupy, and bring into existence a national representative organization. Upon the adoption of the new constitution and bylaws Thursday, January 10, at 4:15 p. m., the old association which for thirty-seven years had served the poultrymen as well as it could within the limits of its proscribed power, went out of existence, and the new organization, born of wisdom and faith and the necessity of the times, came into being.

On Wednesday, the 9th inst., the committee of fourteen, which drafted the new constitution and bylaws at a meeting in Mount Clemens last August, met in Auburn for the purpose of finally considering this document. The mem-

bers of the committee present were: F. L. Kimmey, Grant M. Curtis, Theo Hewes, Thos. F. Rigg, Lester Tompkins, T. E. Orr and F. D. Baerman. It was decided that the committee would stand firmly by the original draft and that the members would enter the general meeting, saying: "Gentlemen, here is our report. It is not a perfect document, but it is the best that we can do. Upon this rock we stand."

An effort was made by the friends of candidates for secretary to defeat the measure, and thus bring about the election of officers at this meeting. But they were driven to cover by the united indorsement of the report by the earnest and wise friends of the association, and upon roll call there were but four votes recorded against the measure and progress.

Will the American Poultry Association as thus reorganized meet the demands of the times? We believe it will and that every branch of the great and important poultry industry in America will be benefited thereby.

It is gratifying to the American Poultry Journal, the pioneer in color printing of representatives of fowls, that when next issued, in 1910, the Standard of Perfection will contain colored plates of the various breeds. This is progress indeed, and will meet with the approval of all fanciers.

The American Poultry Association is going on to better things. Let the membership carefully and wisely guard the offices of the association and all will be well.

Our Colored Illustrations.

Viewed in the light of the demand in the poultry world for colored illustrations of fowls, the announcement of the great work we are planning assumes greater importance as the time draws near for the publishing of it. There has long been a demand for colored illustrations of fowls. We have recognized this and for nearly a year have been preparing illustrations in colors of every recognized variety of poultry, turkeys, ducks and geese raised in the United States, including male and female of each variety.

The demand for colored illustrations has been publicly recognized by the American Poultry Association at its recent meeting at Auburn, and it is to be congratulated upon this progressive step ahead, and when in 1910 a new Standard will be issued and illustrated in colors by authority of the association it will increase the value of the Standard ten-fold.

For a number of years progressive poultry papers had been recognizing the value of colored work and at different times had produced some splendid illustrations of the more popular varieties of fowls. The law of supply and demand works its way surely in every line of endeavor. The demand is so strong and insistent from the poultry field of today that a supply is inevitable, and to meet this demand and to work for the best interests of the great poultry business with which we are connected we propose to furnish our readers with a most delightful treat. All this work is educational in its scope, for we confidently believe that when colored illustrations of all varieties are accumulated together, perfect in form and feathering, that thou-

sands of our readers will become enthusiastic fanciers through this opportunity of seeing what the fancy has to offer them. Never have all recognized varieties been pictured together in one harmonious group or series of groups. While individual specimens have been illustrated in colors, this will be the first time in the history of the poultry business that this stupendous undertaking has been brought to a successful conclusion.

We cannot announce definitely when the first installment of these illustrations will be furnished, but it will be in a short time, and we trust that our readers will look forward with pleasure to this greatest event in the poultry world of today.

Mid-West Branch American Poultry Association.

Life members of the American Poultry Association, representing the states of Illinois, Indiana, Iowa, Wisconsin and Michigan, met in the Seventh Regiment Armory, Chicago, Saturday, January 26, for the purpose of organizing a branch association of the American Poultry Association.

Fred L. Kimmey was chosen chairman and Thos. F. Rigg secretary of the meeting.

Addresses were made by President Grant M. Curtis, Theo. Hewes, W. S. Russell, C. L. Duffield, Miller Purvis, J. M. Williams and others urging organization of a branch association composed of members of the five states above named.

Organization was perfected by the election of officers, as follows:

President—Thos. F. Rigg, Iowa Falls, Iowa.

Secretary-Treasurer—Fred L. Kimmey, Chicago.

Executive Committee—Illinois, Miller Purvis; Indiana, Theo. Hewes; Iowa, F. H. Shellabarger; Michigan, J. M. Williams; Wisconsin, E. G. Roberts.

This ought to be the strongest branch of the association in all America.

Our Subscription Prize Offer.

The attention of every friend of American Poultry Journal who is interested in its growth and the many thousands of its subscription agents who are scattered all over the country is directed to the several advertisements in this month's issue, showing how easily last year one man in our subscription contest got our \$100.00 cash prize. This season we have made the work of procuring subscribers for American Poultry Journal a very profitable undertaking for the person securing subscribers for us. We have issued what is perhaps the most complete list of premiums that any Poultry Journal ever offered, and any of these premiums can be secured by very little effort and by devoting but a very little time to the work.

Among these premiums will be found all the necessary and essential articles for the use of poultrymen, beside a very complete assortment of articles of all kinds for use in the home—in fact, a home could be furnished complete from the premiums that we offer. We make a better and more liberal offer this year than ever before, as we not only offer premiums to everyone

who sends in five subscriptions or more, but we also offer grand prizes for those who send us in the largest lists of names, and the subscriptions so sent in will be counted on both offers. The grand prize is headed by our premium of \$100.00 cash for the one who sends in the largest number before May 18, 1907.

Full particulars and all needed supplies can be secured by addressing American Poultry Journal Publishing Company, Room 510, 325 Dearborn St., Chicago.

Feature the Poultry Show.

It is the belief of a very large number of most prominent and successful fanciers and exhibitors that the time has arrived when the poultry show should be featured by a prominent display of dressed fowls, of eggs, and of the various packages of dressed poultry as made up for shipment long distances. The poultry show of today is conducted upon practically the same lines as the show of a quarter of a century ago. We now have larger exhibits and somewhat better birds. Otherwise there is no difference in the modern poultry show and that of the past.

Standard-bred poultry is accepted by all markets as the world's best poultry. The fanciers created these breeds and varieties and perfected them, and they must now meet the condition as it exists. The use of and demand for market poultry is the base upon which the Standard-bred poultry business rests.

What could be more fitting than a well arranged display of dressed fowls and of eggs at the poultry show? The demand of the times is for such a department in every prominent show, and the show management which does not realize this and heed the call is temporarily blocking progress.

American Poultry Association Matters.

President Grant M. Curtis will not be a candidate for re-election. Mr. Curtis has ably, fairly and carefully served the association, his administration being one of activity and results. C. A. Bryant, of Massachusetts, is, it appears, going to have no opposition in his candidacy for the office of president.

T. E. Orr, who has held the office of secretary-treasurer since 1901, and whose service has been invaluable, declines to stand as a candidate for re-election.

Rose C. H. Hallock, of Missouri, and

"RANKIN'S ROYAL"

Barred, White and Buff Ply. Rocks and White Wyandottes are bred to win, bred to pay, bred for quality and business in every way. Hundreds of selected specimens, line and pedigree bred by my trap nest system, from America's greatest sires and champions for sale on approval at guaranteed honest prices. Eggs \$1.50 to \$10 per 15; \$7 to \$50 per 100. Seriously, you can't afford to place an order (large or small) before writing me.

H. P. Rankin, Box 61, Hartington, Neb.

W. S. Russell, of Iowa, are active candidates for the office which Mr. Orr will vacate.

The places of holding the annual meeting for the next three years must soon be decided. Niagara Falls seems to offer the most inducements. It is centrally located, in the very heart of that portion of the country containing a large majority of the membership of the Association.

An Indispensable Book to Every Poultryman.

No one in the poultry business, either interested from the standpoint of the market, poultryman or fancier, can afford to be without a copy of American Standard of Perfection. This is the official guide for the raising of poultry. In it is described the perfect bird of every Standard variety. These descriptions outline the model from which all poultrymen should pattern their fowls. The closer that the breeder can conform to the requirements of the Standard the greater success he will have in breeding and sale of fowls.

Perfect shape, weight and markings are clearly set down, every section of the bird fully described and a liberal number of the older and more popular varieties illustrated in black and white, as well as individual sections of the bird.

Every year we add thousands of new subscribers to American Poultry Journal. Many of these wish to learn the poultry business who are entirely ignorant of those things that the older fanciers are thoroughly familiar with and in which they are well grounded. But the beginner—the seeker after practical knowledge—desires to know the best source of information for perfection in the business. To such of these we unhesitatingly and emphatically say that the first book to be purchased should be the American Standard of Perfection, and we refer our readers to our advertisement on page 119, wherein the Standard is more fully described.

Hon. H. U. Crawford.

H. V. Crawford, secretary of the New York Poultry and Pet Stock Association, has been elected mayor of Montclair, N. J., by a handsome majority. Montclair is one of the exclusive resident cities of New Jersey. Mr. Crawford ran down to Montclair from the New York show New Year's day, remaining long enough to take the oath of office. The New York "Herald" of January 1 said:

"Mr. Crawford is not a novice in official position. He was elected a member of the Council in 1896 to represent the Third ward, and since then he has been returned at the expiration of every term of two years to succeed himself. Mr. Crawford is a native of Monroe, N. Y., the son of Dr. Samuel M. Crawford, one of the best known citizens in Orange county. His grandfather was colonel of the Second New York Cavalry in the War of 1812. It was natural, therefore, that when the civil war broke out young Crawford, though a mere lad of sixteen, should run away from school and enlist for three years in the Fourth New York Cavalry. Three

Walter P. Baynes : Salem, Ind.

times he was captured and was imprisoned in Libby and on Belle Isle.

"At the close of the war Mr. Crawford took up his residence in New York, and for many years conducted a drug store. He was elected a school trustee of the Fifth ward. About fifteen years ago he removed with his family to Montclair. Besides attending to his official duties Mr. Crawford has found time to devote to the raising of pet stock, and for fifteen years he has been the manager of the annual exhibition of the New York Poultry and Pigeon Association in Madison Square Garden.

"He has always been a consistent republican. Last month he was elected mayor by a vote of two to one against a worthy democrat, and he did not expend so much as a dollar to obtain his election."

The American Poultry Journal congratulates the taxpayers of Montclair. Mr. Crawford will "make good."

Death of George A. Loth.

Mr. George A. Loth, secretary of the Minneapolis Poultry Association, died at his home in Minneapolis, Wednesday, Dec. 26, 1906, after an illness of only two days.

Few men in the northwest were better known than Mr. Loth, and no one has done more for the advancement of thoroughbred poultry in that section of the country.

Throughout the northwest Mr. Loth was best known as a breeder of fancy chickens, and he had a national reputation as an authority on fancy breeds. He was one of the leading judges in poultry exhibitions, and his services were always greatly desired by associations. He had the best reputation of any man in the country on the matter of "mating" poultry for breeding purposes, and he was often sent for from great distances and his expenses paid to have him do some specially fine work in that direction.

It was he who mated the first matings from which resulted the Buff Indians, although the work was done for other parties. He bred the finest strain of Cornish Indians ever raised, and "Loth's Indians" were known the world over, the eggs from his stock being shipped to England and France. His great winning male bird Pretender was considered the finest one ever bred. He was one of the original fancy poultry exponents of Minnesota and he assisted more than any other man to put Minnesota in the front rank of the fancy poultry states.

Mr. Loth was secretary of the Minnesota Poultry association, and under his manipulation some of the finest shows were held that were ever known in the west and Minneapolis gained national fame as a chicken show city. At the last show admiring friends presented him with a handsome gold watch and chain appropriately inscribed.

He is survived by a family of wife and five children, who have a fine home, but, unfortunately, no life insurance is left because of the fact that he was not an insurable risk.

There is a fellow in the advertising department of a New York daily who should be transferred to the staff of humorous writers. The morning of the last day of the New York show

each exhibitor received a letter, as follows:

"Now that the poultry exhibition is about over, the most important point to be considered is, what is to be done with your stock on hand? It will probably hardly pay you to ship it back home. Besides, that's unnecessary. Advertise it in our classified 'Bird and Poultry' column."

* * *

The only man who on the floor at the annual meeting of the American Poultry Association opposed progress stated that no branch of the association would be organized if the proposed constitution was adopted. In less than thirty minutes after the adoption of the constitution more than a score of New York fanciers met and organized the New York branch, electing officers as follows: President, F. E. Dawley; secretary-treasurer, Prof. Rice; executive board, Geo. H. Burgott, M. S. Gardner, Henry Trafford. These are indeed hard times for the obstructionist.

* * *

Dr. U. B. Aldrich very effectually set aside the indictment made by a western breeder that the eastern breeders of Rhode Island Reds are insisting upon a type of Reds which sooner or later will be replaced by the type now demanded by Western breeders. Dr. Aldrich is right. There is but one type of R. I. Red demanded by the better breeders East and West. The Western breeder who raised the false alarm is doing the breed harm, not good.

* * *

The American Poultry Association will never be able to bring about a reduction in the charges made by express companies for carrying standard-bred poultry by passing resolutions of censure. The express companies are governed by business men. Let the association appoint a committee composed of men competent to show the wrong as it exists, this committee to take the matter up with the express companies in a business way.

* * *

A market poultryman in New Zealand writes to his home paper that he has gone out of business because the railroad transportation charges are so high that he cannot get his fowls and eggs to market at profit. Sounds quite natural and homelike, doesn't it? And they have government ownership of railroads in New Zealand, too.

* * *

Some day, when the men who legislate for the American Poultry Association and arrange its Standard of Perfection are more thoughtful than those now in control of the affairs of the association, the best show specimen will be also the best breeding specimen. Why not?

* * *

President Curtis presented to each member of the American Poultry Association present at the Auburn meeting a souvenir of the first edition of the American Standard of Excellence, issued by the association in 1874. It is something which each member highly prizes.

* * *

The thoughtful reader will observe that this issue of the American Poultry Journal is a news number. All prominent events taking place in the poultry world during January are fully covered.

* * *

The men who are offering to do the

work of Secretary-Treasurer of the American Poultry Association "for less money" are putting out mighty poor campaign material.

Mr. H. V. Crawford has again demonstrated that the way to conduct a successful poultry show is to run it from one end only—not from the sides and the middle.

The Auburn fanciers kept the pledge, and all visiting fanciers were royally entertained by M. S. Gardner and his fellow-townsmen.

If you have not resolved to place fewer birds and better quality in your breeding pens for 1907 than ever before, do it now.

Question: Just when and where did the obstructionists get off the track?

The next issue of Farm Poultry will point out wherein it is wrong.

A study in shape and form on utility lines—the Black Orpington.

WEIGHT OF BLACK MINORCAS.

It is the pressing duty of every lover of the S. C. B. Minorca to awaken to the fact that the heavy weights now required by the American standard of perfection will hurt the laying qualities of these greatest of egg-producers.

It is a well known fact among egg-producing poultrymen that no variety of chickens will lay more eggs during the year than the S. C. B. Minorca, and

it is acknowledged by all that they lay the largest egg, averaging 32 ounces to a dozen.

The S. C. Black Minorca, under the original weights, was almost a perfect type of egg-producer. Why, under the same name, are we trying to introduce a type that is clumsy, lazy and beefy? The active hen is the one that lays, and under the new weights the wonderful laying qualities cannot help but be injured. As exhibition birds they are losing that typical shape and beauty that made them the pride of the show room.

Large breeders can easily produce these heavy birds, but new beginners find it discouraging, and many hesitate to take up these splendid birds on account of the heavy weight. There is a petition being prepared to ask the American Poultry Association to lower these weights. We produce and exhibit these heavy birds, but we do not like them, and we wish to protest against the injury done to these grand fowls. If the American Poultry Association lowers the weights they will simply be righting a great mistake. All those interested in this important matter should use their influence with the American Poultry Association.

A. B. Kaye.
Kaye's Park, Walworth, Wis.

BLACK MINORCAS.

My attention was drawn to an editorial of Geo. H. Dexter, of Everett, Mass., in one of the poultry journals touching upon the weights of the Black Minorca chicken, which interested me

so far as this particular breed is concerned.

It intimated that the present weight is a penalty for the breed and that there is a movement on foot to get up a petition of the breeders of Black Minorcas and submit same to the A. P. A. at their next regular meeting, to reduce the weight to its former sizes.

I think that the present weight is an injustice to the fowl and has made same look clumsy, which does not get the favor of the general chicken breeding public.

I am heartily in favor of getting up a petition and having the breeders of Black Minorcas sign it, requesting the A. P. A. to lower the weight of all Black Minorcas to the following weights:

Cock, 8 pounds; cockerel, 6½ pounds; hen, 6½ pounds; pullet, 5½ pounds.

These weights would favor the breed and also do away with other irregularities which the breed is fast assuming, and would put the breed on the level with all other breeds as far as general appearance and utility are concerned.

I would invite correspondence relative to this matter from all Black Minorca breeders, expressing their views on this subject, and if favorable to the reduction of weights, would ask that this be mentioned.

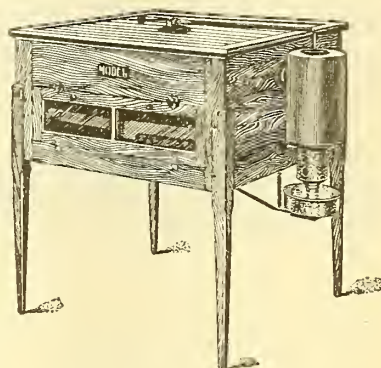

Wm. Mehler.
1011 E. Green street, Louisville, Ky.

Theo. Hewes, 2055 Hillsdale avenue, Indianapolis, Ind., announces he will sell eggs from his prize winning Columbian Wyandottes for \$10 per setting. He made some splendid winnings at the recent Chicago show. It will interest our readers to know that the Oak Hill Poultry Farm that has been advertised for some time in American Poultry Journal belongs to Mr. Hewes.

"MODEL" INCUBATORS AND BROODERS

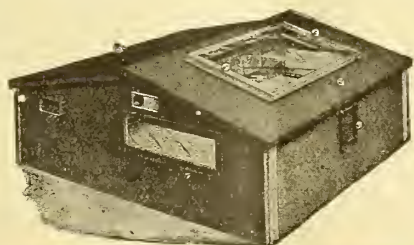

Manufactured by Chas. A. Cyphers

The time is at hand to purchase your incubator. Great care should be made in the selection of same, as your success this year depends largely on starting your chicks right. We have thousands of letters from satisfied customers. Are you one of them?

Chicago Poultry Supply House, Inc.

Everything For The Poultryman : 407 Dearborn Street, Chicago, Ill.

Rouse's Perfection Brooder

Start This Season Right

Did you have trouble last year in raising your chicks? Do you know how to overcome this difficulty this season? By using Phillips' Chick Mixture, Chick Feed and Cut Clover you will find that you reduce the death rate and raise a larger per cent than heretofore. If there are any questions arise which you cannot solve, write us and tell us your troubles. We have practical poultrymen who have had years of experience in all branches. This advice is furnished to you free.

NEW YORK POULTRY SHOW

MADISON SQUARE GARDEN

JAN. 1-5 1907

NEW YORK

Written by Thos. F. Rigg, Associate Editor A. P. J.

Poultry in open classes.....	2,341
Bantams	365
Exhibition yards, 248 (five birds in each).....	1,240
Turkeys.....	67
Ducks and Geese.....	158
Pigeons, etc.....	1,934
Total	6,105

The eighteenth annual exhibition, New York Poultry and Pet Stock Association, held at Madison Square Garden, New York, January 1-5, 1907, again brought together many hundreds of the best known and representative fanciers of the world and an exceedingly large number of choice specimens of fowls of every known breed and variety. In its entirety and in each individual class it was what it has been for years—America's largest and most important poultry show. Nearly 684 breeders of America and England were represented by stock in the exhibition coops. This support indicates clearly the opinion of exhibiting fanciers, their opinion of the New York show, their patronage of such a fixture being based upon business principles. As a social function no other poultry show in all America can compare with the Madison Square Garden exhibit.

This exhibit was a very forceful and convincing object lesson, and the very great importance of the poultry industry and its close relation to the people was plainly shown.

As usual, all went smoothly. The perfected system of management, conceived and put into force by Mr. H. V. Crawford, secretary, was flawless in its operation. This is the eighteenth annual show which Mr. Crawford has conducted, and the great Madison Square Garden show of today is a creature of his executive ability, sound judgment and a nature which adheres rigidly to the right as he sees the right; and it is to the fanciers and breeders who have had faith in the man and trusted him throughout that credit also is due.

Each and every breed and variety of Standard-bred fowls were represented and the contests for the winnings were spirited. The value of a winning at the New York show can hardly be estimated. May each and every exhibitor

at the New York show have a successful and prosperous year, and may all return to the garden January next with the best birds they ever produced.

BARRED PLYMOUTH ROCKS.

Cocks, 30; Hens, 39; Cockerels, 42; Pullets, 54; Pens (24), 120; total, 285. Henry P. Schwab, judge.

Grove Hill Poultry Yards—1, 3, 4 cock; 1, 4, 5 cockerel; 4 pen; 5 hen.

Pinetop Poultry Farm—3 pullet.

Whitcomb Farm—2 cock; 1-2 hen; 1-2 pullet.

C. H. Welles—3-4 hen; 2 cockerel; 4-5 pullets; 1 pen.

Fairbanks & Hovey—2 pen.

L. P. Barr—3 pen.

F. D. Ham—5 pen.

Barred Rocks are always a large and very important class at Madison Square Garden. This year the number shown was a little less than that of last season, but it is the opinion of breeders present that never have more extra good Barred Rocks been penned in the garden upon any one occasion than graced the coops last month.

Nothing of the strife which characterized the contest last year was in evidence, the only members of "Big Seven" represented being C. H. Welles, Hawkins and Grove Hill Yards, Mr. Hawkins having one entry in the cock class. E. B. Thompson, Bradley Bros. and Charley Latham were present, enjoying the sport and keeping sharp eyes on birds which came from their yards.

In each and every class there were specimens of phenomenal merit, the winning cocks and hens being exceptionally well thought of by all competent breeders present.

WHITE ROCKS.

Cocks, 31; Hens, 41; Cockerels, 68; Pullets, 53; Pens (24), 120; total, 313. A. C. Smith, judge.

E. H. & S. H. George—5 cock.

Greystone Poultry Farm—1-2 cock; 3 cockerel; 4-5 pullet; 2-3 pen.

Owen Farms—3 cock; 2 hen; 1 pen.

Geo. W. Hillson—4 cock.

S. J. McQuilliande—4-5 hen.

Rock Hill Poultry Farm—3 hen; 4 cockerel; 1 pullet; 5 pen.

C. C. Fairbank—1 hen; 4 pen.

James Forsythe—2 cockerel.

Gray & Chalker—5 cockerel.

H. W. Strong—1 cockerel.

Peapack Farm—2-3 pullet.

One of the largest and by far away the best class of White Rocks ever here shown. This variety is appealing more strongly to the fanciers and market poultrymen every day. No other breed or variety seems to be forging ahead so rapidly except, perhaps, the Columbian Wyandotte. Type has been greatly improved during the last five years, and

this betterment is seen to a great degree annually. In color requirements they are easily the most satisfactory of all breeds or varieties.

BUFF PLYMOUTH ROCKS.

Cocks, 8; Hens, 10; Cockerels, 19; Pullets, 16; Pens (5), 25; total, 78. W. C. Denny, judge.

Geo. Fox—1 cock; 3-5 hen; 3-4 cockerel; 1-4 pullet; 1 pen.

C. A. Mack—4 cock.

F. H. Ricketts—2 cock.

Crestwood Farm—5 cock; 2 pullet.

Exmoor Farms—3 cock; 2 hen.

P. W. Noyes—4 hen.

James Forsythe—2 cockerel.

E. A. Willis—4 cockerel.

R. A. Tuttle—3 pen.

Monmouth Poultry Yards—2 pen.

Nelson Brussie—4 pen.

S. E. Gesner—5 pen.

Not the showing in quantity which this variety deserved at the hands of its friends. In each class was found a number of extra good birds. The winning Buff Rock of today is a bird differing in color marking to the one which found favor with the judges a few years ago; now but little attention is seemingly paid to undercolor. A specimen with buff surface color, even though the undercolor be pure, appears to have the call. If this be continued much longer the variety will greatly suffer—this is a self-evident fact.

WHITE WYANDOTTES.

Cocks, 38; Hens, 42; Cockerels, 54; Pullets, 54; Pens (20), 100; total, 288. W. R. Graves, judge.

W. Dawson—1 cock.

A. G. Duston—2 cock; 1 hen; 2 cockerel; 3 pen.

Rock Hill Poultry Farm—3 cock; 1 cockerel; 2-4 pen.

Horace Havemeyer—5 cock; 3 hen; 4 cockerel; 2 pullet.

West Mt. P. Yards—5 hen.

Jessie B. Riggs—4 hen.

F. P. Pulsifer & Co.—3 cockerel.

G. E. Mann—5 cockerel; 1 pen.

F. H. Dillingham—4 pullet.

Mrs. W. T. Turner—5 pullet.

Gale Poultry Place—3 pullet.

Elm Poultry Yards—1 pullet; 5 pen.

Many of the leaders who have for years battled for the red, white and blue in historic old Madison Square Garden were lined up and, as usual, each strongly fortified. It was a very pleasing display of this popular and magnificent variety. Not only the winners but many specimens in each class were marvels of beauty and form. The yearly progress being made by breeders is very gratifying to all.

COLUMBIAN WYANDOTTES.

Cock, 18; Hens, 18; Cockerels, 41; Pullets, 34; Pens (8), 40; total, 151. Pens, cocks and cockerels judged by F.

U. R. Fishel More Than Pleases His Customers

Millersville, Ill., Jan. 7, 1907.

U. R. Fishel, Hope, Ind.

Dear Sir and Friend: The cock bird received in due time and we are well pleased with him. He can hardly be improved upon. We are especially pleased with his comb, as that is what we need more than any other point. We have mated him with seven pullets and three hens, including our Prize Winners, and would not take \$300.00 for the pen. With best wishes, I am,

Your friend,

J. A. BICKERDIKE,
The Superior Trap Nest Man.

Muscataine, Iowa, Dec. 16, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I am well pleased with the birds I bought of you, winning first and third hen, first cock and first pen. I beg to remain,

J. O. MUCHA.

Wantagb, N. Y., Jan. 6, 1907.

U. R. Fishel, Hope, Ind.

My Dear Sir and Friend: Mr. —, of — Farm, who has been coming to my place all fall for Fishel pullets, won First Prize Pullet, all the Specials and Ivory Soap Cup for whitest fowl in show at Madison Square Garden last week. Pullets from one of your \$50 breeding pens have swept all of New York State and are in a class by themselves. Your friend,

T. F. FITZPATRICK.

Jersey City, N. J., Dec. 18, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I have my neighbors beaten by a mile in the number of eggs I am getting. During the month of November fourteen pullets laid 135 eggs; up to the 16th of this month they laid 128 eggs. I am very well pleased with your fowls; they certainly are THE BEST IN THE WORLD.

Yours truly,

P. HUMMEL.

Greenfield, Tenn., Jan. 2, 1907.

U. R. Fishel, Hope, Ind.

Dear Sir: The White Rocks arrived in good time and in good shape. To say I am well pleased expresses it very mildly. I entered them at our show and won every prize on White Rocks. I am

Yours very respectfully,

G. H. DREWERY.

Lebigb, Kans., Dec. 12, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I took first prizes on my Fishel White Plymouth Rocks, and every one at the show thought they were just the thing. I intend to start a poultry farm with nothing but your White Plymouth Rocks.

C. F. GRAMBERG.

Kurtz, Ind., Dec. 30, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I am very happy in the possession of the fine birds sent me, and I thank you very much. They are beauties and have been admired by every one. Book my order for a setting of eggs to be shipped in April. I am, sincerely,

LOUISE ARMBRUSTER.

Saginaw, Mich., Dec. 12, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I want to let you know the result of success with the eggs bought of you and from the pen gotten of you last January. At Jackson, Mich., I won first pullet, score 96, fourth cockerel and pen. I want some more birds for coming show.

Yours,

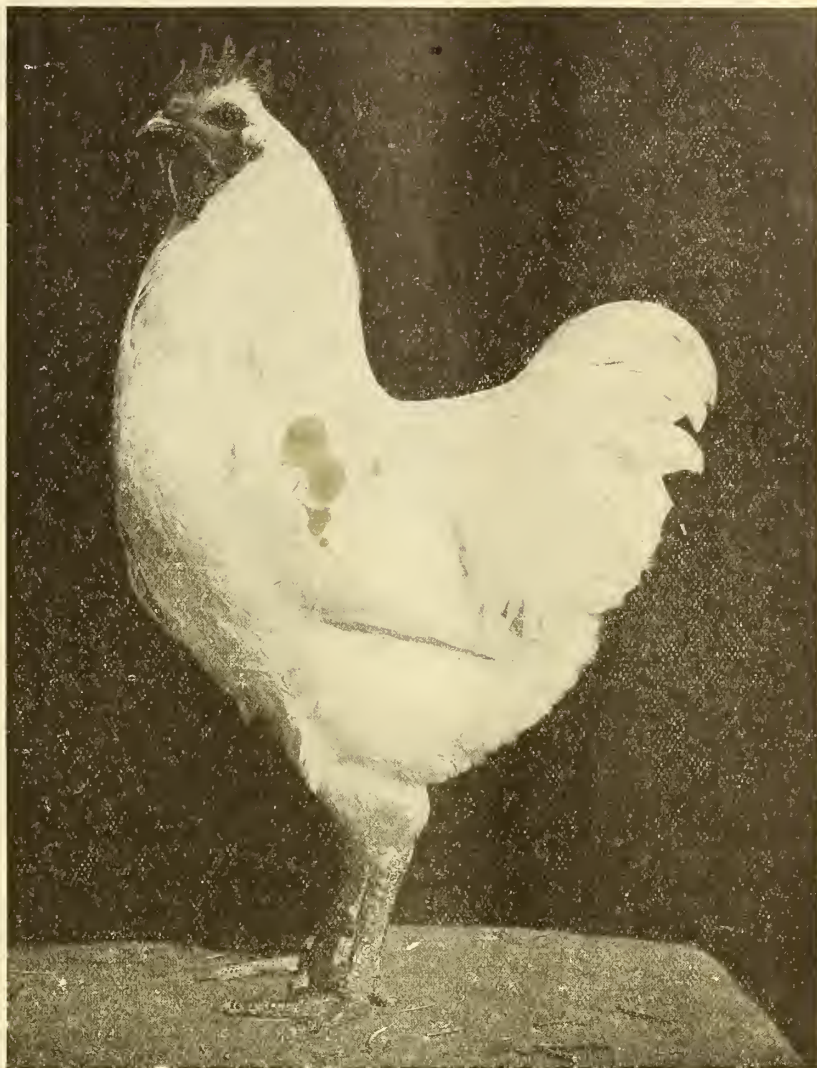

H. A. BECKMAN.

Mobile, Ala., Jan. 3, 1907.

U. R. Fishel, Hope, Ind.

Dear Sir: Last September I bought a setting of eggs of you, and they reached me with one broken. Hatched ten chicks from the fourteen eggs, and would not take double the price paid for the eggs for any one of the birds. I want some more eggs soon. Let me know what they will cost me.

JOHN T. GLENNON.

A U. R. Fishel Type White Rock Male

WHITE PLYMOUTH ROCKS

are conceded everywhere to be the most beautiful and profitable fowl there is, and are justly called the MONEY MAKERS. I have something over SIX THOUSAND FOR SALE. No matter what you want in poultry—Selected Breeders or Utility Flocks, I can supply you. Remember I have over two thousand selected cockerels from \$2 up. Do not place your order until you see my new 56 PAGE CATALOG; send two dimes for a copy. Worth dollars to anyone interested in poultry. The printers were a little slow in getting the thirty thousand printed, but they are ready to mail now and I want you to have a copy. My yards are mated up and I have the best lot of breeders mated I ever owned—you know what that means. Write me.

LEE'S 3 LEADERS

"I have been in the poultry business for 15 years and Lee's Egg Maker beats anything I ever fed."—E. M. Robinette, Ordway, Colo.

Lee's Egg Maker not only starts hens to laying but it keeps them at it. The increased egg yield will pay for Lee's

Egg Maker

and give a good big profit besides. Egg Maker is one-half granulated blood (deodorized), a highly concentrated form of meat food—just what all hens need to help them lay. It supplies materials eggs are made of—keeps hens busy. Comes at 25c., 50c. and \$2. All dealers sell it or sent direct.

Roup, Colds, Frosted Combs, Canker, Swelled Head and a whole train of winter disorders knock out the poultrymen's profits.

Germozone

twice a week in the drinking water cures them all and keeps fowls in the pink of condition. A 50c. package stops the loss and puts profit in your pocket. Dealers sell it or we will send it direct.

Don't let lice pester your poultry. Just spray the roosts, nests and every crack in the poultry house with Lee's Liquid

Lice Killer

No bother to use—no handling, dusting or greasing of fowls. Per can 35c., 60c. and \$1. Sold everywhere. Write today for Lee's FREE books and a "Mandy Lee" catalog. GEO. H. LEE CO., Omaha, Neb.

C. H. Brundage—1 hen.

A. C. Hawkins—1 cockerel; 1 pen.

J. Frank Van Alstyne—3 cockerel.

M. A. Brayton—4 cockerel.

S. T. Eveleth—5 cockerel; 3 pullet.

Gedney Farm—2 pullet.

L. L. Bright—5 pullet.

John Evans—4 pullet.

No exhibit in the garden attracted more attention or was more admired than this. The fanciers who are now foremost with the variety were wise enough and progressive enough to see to it that these new candidates were in evidence in great number. Here were shown cockerels and pullets which for color markings were something truly wonderful. The Columbian Wyandotte is not a perfected fowl, but this exhibit recorded the fact that they are rapidly coming to the point of fixed type and true color markings.

SILVER LACED WYANDOTTES.

Cocks, 9; Hens, 8; Cockerels, 12; Pullets, 13; Pen (1), 5; total, 47. Ira C. Keller, judge.

Dr. A. T. Beckett—1 cock; 3 hen.

R. G. Williams—5 cock.

E. H. Morris—4 cock; 1-2 pullet.

Oaklawn Poultry Farm—2 cock; 3 pullet.

W. B. Barton—3 cock.

Oliver Carter—4 hen.

Samson & Alden—2 hen; 2-5 cockerel.

Fenwood Farm—1 hen; 5 pullet.

C. S. Shirk—3 cockerel.

A. C. Allen—4 cockerel; 4 pullet.

J. C. Godfrey—1 cockerel.

J. Frank Van Alstyne—1 pen.

America's original Wyandotte needs the better support of its friends. Annually the variety is falling off in importance as a show fowl. This is not as it should be. There is no better or more beautiful fowl in all creation than a well-bred, well-marked Silver Laced Wyandotte. But the tide of popular favor seems to be running from them.

BUFF WYANDOTTES.

Cocks, 11; Hens, 14; Cockerels, 15; Pullets, 13; Pens (7), 35; total, 88.

W. C. Denny, judge.

W. T. Lord—1-4 cock; 1-2 hen; 4 cockerel; 2-5 pullet; 2-3 pen.

Mattison & Dutcher—3-5 cock; 3, 4, 5 hen; 1-5 cockerel; 3 pullet; 1-5 pen.

R. W. Sturtevant—2 cock; 4 pullet.

R. Y. Coolidge & Son—2-3 cockerel; 1 pullet; 4 pen.

One of the very strongest classes of Buff Wyandottes ever exhibited in America. The breeders of this variety have learned how to produce the even, beautiful surface color and still hold strong undercolor. The buff breed or variety so handled is sure to be the leader—it could not be otherwise.

PARTRIDGE WYANDOTTES.

Cocks, 17; Hens, 17; Cockerels, 14; Pullets, 15; Pens (4), 20; total, 83.

Ira C. Keller, judge.

M. H. Coffin—1 cockerel; 2 pullet.

E. G. Wyckoff—3 pullet; 3 pen.

C. H. Brundage—4 pullet.

Partridge Wyandottes are always a large and interesting class at New York. The advancement made in color markings during the past few years has been far along, and today we find cooped specimens of this variety which are the equal of the best Partridge Wyandottes. A few breeders have been neglectful of shape requirements and as a result we find many females approaching Plymouth Rock form.

S. C. R. I. REDS.

Cocks, 20; Hens, 16; Cockerels, 27; Pullets, 28; Pens (11), 55; total, 146. Thos. F. Rigg, judge.

De Graff Poultry Farm—2 pullet; 4-5 pen.

Geo. W. Tracy—1 pullet.

In no breed or variety shown in the garden this season was more interest taken than in the Rhode Island Reds. Never before have better Reds been exhibited. Each class was full of quality

and many magnificent birds were shown. Great improvement has been made in color markings, although many breeders continue to show birds more

MADISON SQUARE GARDEN, NEW YORK CITY.

buff than red. And it is the breeders who are so fearful of placing in the breeding pen a male with a little dark in undercolor. The breeder who uses

specimens with less black in plumage than is called for by the Standard of Perfection will, in our opinion, fail to produce winners. He will get not the beautiful red bird so much desired, but the buff specimens such as many Red breeders are now showing. Some idea of the interest now being taken in Reds may be gained by a glance at the books of the secretary of the Rhode Island Red Club of America, which show that at the meeting held on Thursday of the week of the exhibit more than 250 new members were added to the club's enrollment.

"Ringlets" are the Imperial Birds

Winners of Special Prize for Best Pen Mated to Produce Exhibition Cockerels, at N. Y., 1906

The three most superb Barred Plymouth Rock Exhibition Pens on either hemisphere were exhibited by E. B. Thompson at the recent New York Show, Madison Square Garden, Jan., 1906; winning 1st, 2d and 3 special prizes on pens. The Harding Challenge Silver Cup for Best Pen, and the American Ply. Rock Club's grandest special prize for best pen mated to produce Exhibition Cockerels.

MY FIRST PRIZE SILVER CUP PEN WAS STAMPED WITH THE SEAL OF "RINGLET" PERFECTION

These three "Ringlet" exhibition pens were the most striking feature of the most wonderful array of Barred Rocks the annals of time record. They represent the cream of my long and rich experience. The sun never before shone on Madison Square Garden when the great building held three such matchless exhibition pens; they were the triumph of the Fanciers' Art.

My "Ringlet" cockerel at New York winning the American Plymouth Rock Club's special prize for best shaped male is a perfect "Apollo," the ideal Barred Rock Male of the New Standard of Perfection.

THE "RINGLET" BREEDING PEN WINNING the Club's Great Special offered for the best pen mated to produce exhibition cockerels, was declared to be the very acme of skill in mating, a revelation in the science of Barred Rock cockerel breeding. My matings made up of these great winners and their blood have produced this year the great winners for the coming winter's leading shows.

The enormous prestige of the "Ringlets" created by superlative quality has made them the standard by which all other Barred Rocks are judged

"Ringlet" Eggs Are The Best That Money Can Buy

Mr. E. B. Thompson, Amenia, N. Y.

Dear Sir: I take pleasure in thanking you for the setting of "Ringlet" eggs you sent me. One of the cockerels from these eggs has won many first prizes for me, and this winter at the Lindsay Show he won first prize, scoring 94½ points. I got one pullet from your eggs that was never beaten except by one of her daughters. I showed her at Lindsay this winter, winning first prize and all specials for best female of any age. She scored 95½ points, the highest score of any hen of any breed on exhibition. She was pronounced the most perfect Barred Rock hen ever shown. I again thank you for the high quality "Ringlet" eggs you sent me. Yours very truly,

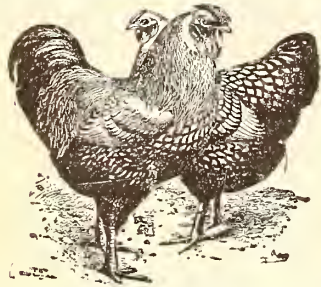

Burnt River, Ontario, Feb. 15th, 1906.

Joseph Harper.

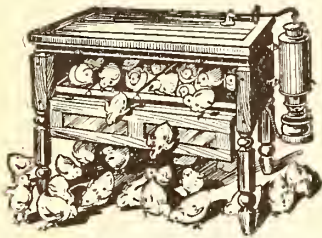

Richly illustrated 48-page catalogue upon request; it is full of illustrations of New York winners from life. Elegant exhibition and breeding birds for sale in any numbers. Eggs from Finest Exhibition Matings: One setting \$5; two settings \$9; three settings \$12; four settings \$15. See my ad on back cover page.

Wm. Cook & Sons—4-5 cock; 2-4 pen.
Sunwick Poultry Farm—1 cock; 3-4 hen; 1-2 cockerel; 2 pullet; 3 pen.

Willowbrook Farm—2 cock; 3-5 cockerel; 4-5 pullet; 1 pen.

Gedney Farm—1 hen; 1 pullet.

Owen Farms—1-5 hen.

W. M. Bell (England)—4 cockerel; 3 pullet.

M. S. Sherwood—5 pen.

If there is a breed or variety which is built upon more practical utility lines than the S. C. Black Orpington, men do not know it. Not only this—there is rare beauty as well in a properly developed Black Orpington. Here the cream of the flocks of America and England competed for the honors, and we are pleased to state each took down some of the coveted ribbons. It was, indeed, a wonderful showing made by this variety.

S. C. WHITE ORPINGTONS.

Cocks, 9; Hens, 13; Cockerels, 11; Pullets, 18; Pens (6), 30; total, 81. Richard Oke, judge.

Henry A. Kirby—1 cock; 3 cockerel.
Willow Brook Farm—2, 3, 4 cock; 1-2 hen; 5 cockerel; 1-4 pullet; 1 pen.

Sunwick Poultry Farm—4 hen; 2 pen.

W. M. Bell—3-5 hen; 1, 2, 4 cockerel; 2, 3, 5 pullet.

Elm Poultry Yards—4 pen.

Friends of the S. C. White Orpington were more than pleased with the showing made by their favorites. So long as the proper attention is given this variety, so long will it continue to advance in popular favor.

S. C. BROWN LEGHORNS.

Cocks, 12; Hens, 10; Cockerels, 10; Pullets, 22; Pens (6), 30; total, 84. Geo. H. Burgott, judge.

Grove Hill Poultry Yards—1, 2, 3, 5 cock; 1-3 hen; 1-5 cockerel; 1 pen.

G. C. Brinkerhoof—4 cock; 4 cockerel.

Miss Sophia C. Pritchlynn—2 hen; 2-4 pullet.

Exmoor Farms—4-5 cock.

Joseph Bleistein—2 cockerel.

A. L. Preston—3 cockerel.

R. W. Hubbard—5 pullet.

The annual showing of S. C. Brown Leghorns at New York is always an interesting and popular one. This variety is one of the old ones which have steadily grown and are more popular today than ever before. The revised Brown Leghorn, the Brown Leghorn of

The greatest profit from hens is in making yours lay when the other fellow's don't—an easy thing to do when each morning's feed contains a small portion of Dr. Hess Poultry Pan-a-ce-a. This tonic preparation also cures gapes, cholera, roup, indigestion, etc.

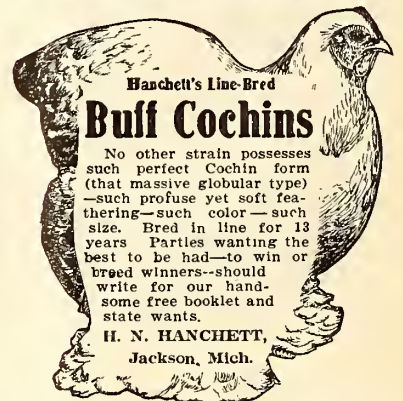

DR. HESS Poultry PAN-A-CE-A

is a wonderful assistant to hen nature. By its use, functions and organs, which in confinement become dormant or inactive, are compelled in an easy and natural manner to act as nature intended. This is why

Dr. Hess Poultry Pan-a-ce-a fills the egg basket in winter. It is the prescription of Dr. Hess (M. D., D. V. S.), and is endorsed by leading poultry associations in United States and Canada. It costs but a penny a day for 30 fowls, and is sold on a written guarantee.

Hen instinct controls the whole hatch from beginning to end; therefore, you get better results from your hatch. Agents Wanted. Catalog FREE. **Natural Hen Incubator Co.,** B-4, Columbus, Nebraska.

HOGAN HENS Select the 200 egg layers, pullets that will make layers, cocks that breed layers. The Walter Hogan System does this. No money till you prove it. Book free. **THE WALTER HOGAN CO.** 17 National Bank Building, Fergus Falls, Minn.

the present, is a beautiful creation and a most useful one.

S. C. WHITE LEGHORNS.

Cocks, 21; Hens, 23; Cockerels, 34; Pullets, 32; Pens (16), 80; total, 190. Geo. H. Burgott, judge.

D. W. Young—1, 2, 5 cock; 1-3 hen; 3 cockerel; 1-3 pullet; 2 pen.

E. G. Wyckoff—3 cock; 2 cockerel; 1-5 pen.

Elm Poultry Yards—4 cock; 2 hen; 1 cockerel; 5 pullet; 4 pen.

Geo. A. Barrows—5 hen.

I. R. Rice—2-4 pullet.

Rock Hill Poultry Farm—4 cockerel; 3 hen.

The great popularity of the S. C. White Leghorn was well illustrated in this exhibit. Here were found 190 specimens of the breed and among them some of the best ever produced. It is pleasing, indeed, to note that fanciers have increased the size of the White Leghorn without detracting from the beauty and grace of the fowl nor impairing its wonderful power for egg production.

R. C. BROWN LEGHORNS.

Cocks, 10; Hens, 11; Cockerels, 18; Pullets, 15; Pens (4), 20; total, 74. W. W. Babcock, judge.

E. D. Pierson—2 cock; 1-2 hen; 1-3 cockerel; 1, 2, 3 pullet; 1 pen.

Mrs. Geo. B. Tucker—4 cock; 5 hen.

E. B. Spencer—3 cock; 4 hen.

W. T. Lindell—1 cock; 4 pullet; 2 pen.

Wm. Cadman—5 cock; 3 hen; 5 cockerel; 5 pullet.

Gale Poultry Place—2 cockerel.

James Forsyth—3 pen.

Mrs. Paul Kyle—4 pen.

Again it was shown that R. C. Brown Leghorn breeders must give more attention to increasing the size of their birds. They have the color lines well established. The R. C. Brown and

White Leghorns will not take their place as the "farmers' egg machines" until breeders give them a little more size.

90 DAYS FREE TRIAL

Test the Merits of the Missouri Queen

and its superior heating system at your own home for 90 days and then if you are not satisfied that it is the most practical and successful hatcher, that it fulfills all the claims we make for it, you may return it to us and lose nothing by the transaction.

The Missouri Queen Incubator

has many other superior features besides its heating system which make it such a successful hatcher of strong, healthy chicks. Its regulator is accurate and constant in its action and will not allow the temperature to vary the slightest fraction from 103° when once adjusted. The ventilation is natural and self-regulating. In fact, throughout the whole construction of this machine we have spared no pains to make it the Queen of all hatchers. Write for descriptive catalog and free trial plan.

A. J. Kreutler—2 cock; 1-3 cockerel; 3 hen; 1-2 pullet.

Rock Holland Farm—5 cock.

F. K. Wismer—3 cock; 2 hen.

Worthington Poultry Yards—2 cockerel; 2 pullet.

All awards on Slate Turkeys to Miss Sara A. Little.

The largest and best showing of turkeys made at Madison Square Garden for several years. In Bronze and Whites some magnificent specimens were cooped.

FLOOR NOTES AND VIEWS.

The fanciers' show of America!

The visiting English fanciers were delighted, and pleased to assure us that the Crystal Palace is not the "only one."

Despite the unfavorable weather the attendance was very large.

Secretary-Superintendent H. V. Crawford took a run down home, to Montclair, N. J., New Year's day, to take the oath of office as mayor of Montclair. He left T. Farrar Rackham at the helm.

So long as Mr. Crawford and his associates make the New York show so good that the exhibiting breeders cannot afford not to be represented therein, the question of amount of the entry fee will not bother them.

Some notable sales were made. Frank Gaylor paid W. M. Bell \$350 for five S. C. Black Orpingtons, the male bird being third cockerel at the Palace. Lester Tompkins refused an offer of \$500 for his first S. C. R. I. Red pen.

We place the horseshoe over your door this New Year's day, Mr. Crawford. May the year bring to you and yours much good and happiness.

Game Bantams were numerous and of splendid quality. The Game men tell us that this was the best showing of Game bantams ever made in the Garden, quality considered. Certainly the winners are specimens of rare worth.

Some one, evidently a fellow who knows things, has styled A. C. Hawkins "America's best poultryman." He certainly knew how to get into the right place at the right time. He showed Columbian Wyandottes for the first time, winning first cockerel and first pen.

As usual there was a most pleasing showing of Hamburgs, the Silver Spangled variety leading in numbers

When Considering

what breed to choose, that fills every requirement, both fancy and market, you naturally select the popular

W. Wyandottes

that have become famous in history of poultrydom as the greatest money making breed on earth. You can make no mistake in taking up White Wyandottes, and it is well to

Remember

that thinking of White Wyandottes you will also link the name to that of

Clement & Fike

the men that have revolutionized the whole W. Wyandotte industry, that have built up a winning strain of birds and out-distanced all competitors. Men that have made good and can furnish the goods on demand. A fact worthy of note is they

Have The Quality

that can win over all others. From every large show East and West come reports of our customers winning the blue. We raise our winners, and those grand specimens we see

In Their 1907 Matings

are birds of quality, that has taken years to produce. We believe our achievement in our scientific matings has reached the highest goal of success; every bird selected for its characteristic of shape and color. Their wonderful **show record** of 16 firsts at four shows, including Chicago, a victory never attained by any other Wyandotte breeder and our claim

"Greatest Strain on Earth"

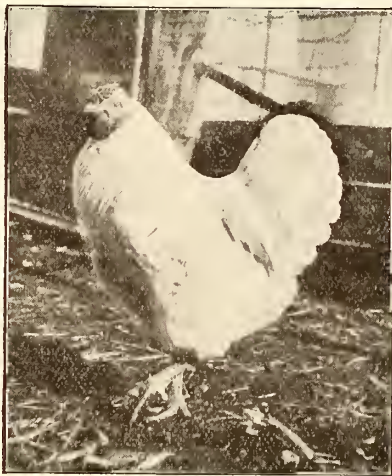

has been justly earned by our winnings and those of our customers. We sell

Eggs For Hatching

from the grandest pens we ever owned. 15, \$5; 30, \$8; 45, \$10; 100, \$20. Egg circular free. Catalog, 4c in stamps. 1000 birds still for sale. Great closing cockerel sale; \$3, \$5, \$8 and \$10 each.

Clement & Fike, Libertyville, Ill.

Phone 235 :: H. H. Fike, General Manager :: Box A

and interest, as usual. Some of the English birds were sold at long prices.

D. Lincoln Orr's second cockerel, Columbian Wyandotte, was greatly admired by the Columbian fanciers, and Mr. Orr was asked by several to set a price on the bird, after declining two offers at big prices. His second pen was also extra choice. Mr. Orr is nicely fixed in Columbians.

The showing made by the Houdan breeders was a very poor one. James Fair Clough had birds of exceptional quality—the only good Houdans shown. Some one must come to the rescue of the Houdan or else it will go down and out.

Rock Hill Poultry Farm won the much coveted prize, the Ivory Soap special for the whitest bird in the show, with a White Rock hen. Mr. Corey was happy.

About the usual number of Silver Gray Dorkings were shown, the ribbons going up as follows: Watson Westfall, 2 cock, 1 hen, 1 cockerel, 3 pullet; M. R. Jacobus, 1 cock; Henry

Hales, 3 cock. All Colored Dorking awards to Geo. B. Inches.

Elm Poultry Yards, Hartford, Conn., made an enviable record in their classes. Their first white Wyandotte pullet was a wonderfully beautiful thing, the admiration of all breeders.

John B. Hadaway, Brockton, Mass., always wins with his Partridge Wyandottes. This season he exhibited a number of very choice specimens.

Grove Hill Poultry Yard, Waltham, Mass., made an extraordinary winning in Barred Rocks and S. C. Brown Leghorns. Wm. Ellery Bright does a thing when he does it. Year after year he continues to breed and exhibit winning birds of his breeds, and no strain of Rocks or Brown Leghorns is better or more popular.

Geo. W. Mitchell, Bristol, Conn., has long been recognized as the producer of the best Partridge Cochins in the world. His entries were the admiration of all those interested in this beautiful breed, and attracted a great

deal of attention. They are a very attractive show bird.

The White Indian Games were greatly admired.

The awards in Partridge Plymouth Rocks were as follows: Partridge Plymouth Rocks—T. W. Schofield, 4 cock, 2-3 pullet; Henry Olmisch, 3-5 cock, 3 hen, 2 cockerel, 4 pullet, 2 pen; C. A. Kahle, 1 pen, 1-2 cock, 1 cockerel, 1-5 pullet; Henley & Pool, 5 cock, 4 hen.

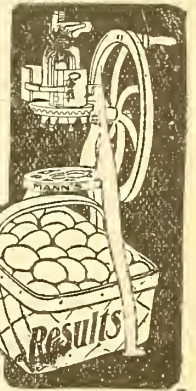

Greystone Poultry Yards, Yonkers, N. Y., Frank Gaylor, manager, made extensive winning in White Rocks, Orpingtons. Mr. Gaylor took home with him the best of the English entries in Black Orpingtons. His winning White Rocks were marvels of beauty.

Silver Duckwing Leghorns are indeed beautiful, and are in good hands. Awards were as follows: E. G. Wyckoff, 4 cock, 1 hen, 4 cockerel, 3 pullet; Thos. Peer, 2 hen, 3 cock, 1 cockerel, 1 pullet; Exmoor Farm, 1-2 cock, 3-4 hen, 2-5 cockerel, 2-5 pullet.

Mrs. R. W. Holland, Bel Air, Md.,

**To Get More Eggs in Winter
To Get Bigger, Stronger Hatches
To Get Earlier Maturity
To Get Heavier Fowls
To Save in Grain Bills**

Try This Way

EVERY atom of matter that the hen puts into an egg, must come from the food she eats. She can't get it in any other way.

So, it is perfectly clear that if you expect to get more eggs, you must give the hen materials to make eggs from—food containing more of the elements that enter into egg making, in an easily digested form.

There is no room for argument there.

But what kind of food is that?

Where will we find it?

Well, it so happens that not only the egg, but the greater part of the fowl's body—bone, muscle and feathers, is made up of what the professors call "protein."

Unfortunately, it also happens that protein is found in only small quantities in the grains and vegetables usually fed to fowls, but in exceedingly large quantities in animal matter or food.

That explains why fowls of all sizes and ages, from the youngest chick to the oldest rooster, love worms and bugs above everything else.

They crave animal food, because Nature's instinct teaches them that they need it for growth, development, vitality and egg-making.

* * *

Of course your hens cannot get worms and bugs in winter or when they are confined to close quarters.

You, therefore, must give them this protein food in some other form, if you hope to get the best results from your flock.

You can get this protein in its most digestible form—most nearly like the worms and bugs your hens love so much,—by simply taking the trimmings from your butcher's block, the bones of beef, pork or lamb with gristle and meat adhering to them.

They make a perfect substitute—not only because they contain the same food elements as the worms and bugs, but also because, in its fresh, raw state, it is as easily digested and as greatly relished as are the worms and bugs.

In effect it is not something that

is almost as good," but it is identically the same.

It "balances the ration" by supplying what is lacking—or is very scarce, in the grain you feed.

It has more than four times the egg-making value of grain and is rich in the elements needed for making bone and muscle and so promoting rapid growth and developing as well as improving the vigor and vitality of the entire flock.

That is why fresh-cut raw bone—doubles the egg yield by giving the hen egg-making material in its most easily digested form;

—makes more fertile eggs, produces larger hatches and livelier chicks, because it makes hen and

"beef-scraps, can take the place of raw bone.

It is the live worm the hen craves, not a dried up carcass, and it is raw, fresh animal food that does her the most good and is the most easily digested.

If dried, or cooked or embalmed or preserved it naturally loses a large part of its value.

Neither should you class raw bone with the advertised "poultry foods" or "condition powders" made from secret formulae, for which such extravagant claims are made. Your hens do not need these compounds or medicines to make them lay, if they have the right kind of material in their food.

Neither do they need the ready

No Money in Advance.

MANN'S LATEST MODEL Bone Cutter.

cock more vigorous, fuller of vitality, so that the eggs have more life in them;

—develops earlier broilers and layers and makes heavier market fowls, because it promotes growth by supplying the elements most needed for making bone and flesh and muscle;

—makes red combs, bright eyes and glossy plumage, because it gives the fowls that variety of ration so necessary to their health and well being.

No matter what line of poultry raising you are in, fresh cut raw bone will help you get better results and make more money.

And the beauty of it is, it costs you but little more than the labor of cutting it.

* * *

Don't be persuaded, however, that "bone meal" or so-called

mixed foods whose composition you don't know, and which you would consider extremely expensive if you did know their ingredients. You have to buy them "on faith;" you don't know what is in them.

How much better to use raw bone, and mix your own ration, using the cheapest grains and yet being sure that you have the best and most economical of all rations.

* * *

Of course the bone must be properly cut, but that is an easy matter with

Mann's Latest Model Bone Cutter

We want you to try this machine and we make the way easy for you.

F. W. Mann Co., Box 56, Milford, Mass.

To prove what it will do, we will send you any Mann's Latest Model Bone Cutter that you may select from our catalogue on

Ten Days Free Trial

(No money in advance)

You simply select the machine you want to try—and we send it to you. No red tape, no "deposit," no money in advance.

If it does what we claim it will do, you buy it.

If not you return it at our expense.

Can we make you any fairer offer than that?

* * *

You will find that Mann's Bone Cutter turns easily, cuts rapidly and produces better poultry food than any other.

It turns more easily than any other because its self-governing feed automatically adjusts the cutting to your strength, so that any one can use it.

It makes better poultry food than any other because it cuts not only all green bone, but also all adhering meat and gristle—wasting nothing and leaving no chunks or slivers.

Its open hinged cylinder takes large bones and can be easily kept clean.

It is strong and durable and requires few repairs.

But try it and see—that's the way to tell.

Send Today for Catalog

and make your selection of machine for trial.

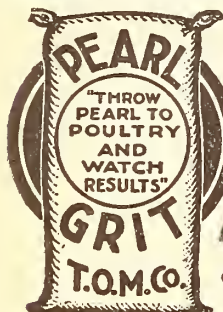

We will do the rest.

Triumph Lice Remedies Are The Best and Cheapest

Our circular will convince you. It's free; write for it.

Triumph Mfg. & Supply Co. Room 21, Commercial Bldg., Marshalltown, Iowa

Correct feeding is of great importance at any time. At this season of the year when the birds are in the midst of winter and when a vigorous constitution for the production of eggs for spring hatching is especially desirable prudent poultrymen will watch fowls carefully and keep them well supplied with proper materials for keeping every part of their anatomy and every vital organ strong, healthy and vigorous. Timely attention to their diet now will render the system active and put the egg-making organs in good order. Results will show in the egg basket, in thrifty chicks and prolific layers later on. Give your fowls plenty of Pearl Grit. It both

Grinds and Nourishes

It is clean, white, sharp and hard and easily found in the litter. It furnishes Chemico-food elements for bone-building, sinew-strengthening and shell-forming that are lacking in ordinary feed.

Pearl Grit supplies silicon for feathers and sulphur for the eggs besides many other properties of value which are absorbed by the digestive system and are assimilated by the fowl's body.

It is a double purpose grit. It grinds well and makes shell; serving every purpose of shell-making material and grit. It saves time and labor and is a money maker. Try it

Petros, Tenn.

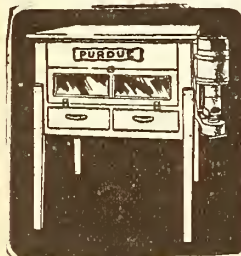

OHIO MARBLE CO., Piqua, Ohio.

GENTLEMEN:—We wish to say we have used your Pearl Grit for three years past with the greatest satisfaction. We reared 3,000 excellent specimens on your grits last season. We find it far better than many others, your grit being more sharp, and valuable until worn out. Being white in color, the birds easily find it and little is lost.

Respectfully, WILBUR BROS.
S. C. White, Leghorn Specialists.

It will do as well for you. Write for free booklet.

OHIO MARBLE COMPANY. BOX 209, N. WAYNE STREET. PIQUA, OHIO.

True Success

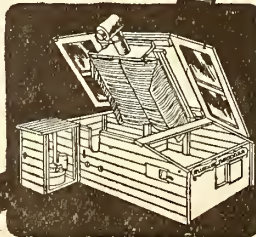

PROFITS are the measure of success. You are not getting your share if you lose a goodly per cent of your eggs every time you bring off a hatch. Such waste is not necessary, but it's common. To avoid it has been the earnest effort of the Experiment Station at Purdue University. It was through painstaking, study, and experiment there, with practically every good incubator made that the true principles of incubation were developed and embodied in the

PURDUE Incubators and Brooders

The inventor, Mr. C. E. Coffin, was an enthusiastic poultry student in this institution. He studied incubation from a scientific standpoint. His aim was abundantly realized. His are practical, everyday, working machines. They get results. Being so largely the result of principles established in the experimental work of the institution itself, he very properly gave them the name of his Alma Mater. Today they have the ungratified endorsement, not only of the Purdue Experiment Station, but of hundreds of expert poultrymen. They are not machines of "talking points." They grew out of tests and experiments with the best. They have hatching and brooding genius.

Write for Catalogue and learn the reasons. Why there are more chicks, why they are bigger and stronger, why more of them live, how expenses and losses are cut down, and how profits may easily be doubled cannot be told here. But our book tells. Write and let us send you a copy, FREE, and we pay the postage. A postal request will bring it. Write today.

THE INTERSTATE INCUBATOR COMPANY,
101 South Capital Ave.,
Indianapolis, Ind.

was the most pleased exhibitor we met. She entered four Black Langshans, winning two firsts, one third and one fourth. It was her first showing. No need to say that it will not be her last.

The water fowl coops were well filled. Pekin ducks lead in numbers. There were some magnificent Rouens on show. The Rouen duck is going to be in greater demand than ever before. All leading breeds of geese were represented.

C. C. Fairbank, Saybrook, Conn., showed a number of extra choice White Rocks. Mr. Fairbank has established a type of White Rocks that are much pleasing to the fanciers and to all who have the best interest of this valuable variety at heart.

Standard Games were few in numbers, but good in quality. The Game as a popular show bird has, evidently, seen its day in America. This fact is to be regretted.

Some beautiful Silver Penciled Plymouth Rocks were cooped. All prizes went to Rock Hill Farm.

Lester Tompkins, Concord, Mass., made a killing with his S. C. and R. C. Rhode Island Reds, winning every first but one, and nearly all other prizes. Mr. Tompkins long ago established himself in the place of America's foremost R. I. Red breeders. He has a thoroughly established strain, having type firmly fixed, with excellent color. His first and second pen birds are conceded by all to be the best Reds yet produced.

Black Leghorns were a very pleasing class. We see no reason why they should not become very popular. They are strikingly handsome, bred true to color and form and are great egg producers. The winnings: E. G. Wyckoff, 2-3 cock, 1 hen, 1 cockerel, 1 pullet; W. M. Osborne, 3 cock, 3 pullet; A. F. Noll, 1 cock; Exmoor Farm, 4 cock.

Rocky River Poultry Farm, Chicago, Ill., made extensive winnings with their R. C. White Leghorns. But as this is the usual way these people do it was simply another case of the expected happening. Their Leghorns are leaders everywhere.

It is too bad that the beautiful and useful Golden Wyandotte was so little shown. Prizes were posted as follows: Charles H. Brundage, 1, 2, 4 cock; 1, 2, 3 hen; 1, 2, 3 cockerel; 1, 2, 4 pullet, 1 pen. L. H. Davis, 2 pen. A. A. Sibley & Son, 3 cock. G. H. Smith, 4 hen; 4 cockerel; 5 pullet. E. H. Morris, 3 pullet.

Charles McClave, New London, Ohio, was represented in the water fowl and turkey entries, and, of course, won several firsts. Charles always does this, as he has "the goods."

Silver Penciled Wyandottes do not seem to "come." E. G. Wyckoff, 1 cock; 1-4 hen; 3 cockerel; 2-4 pullet; 1 pen.

There were a few Black Wyandottes of good quality shown. We do not know whether or not Tom McGrew found one which he deemed good enough to improve the color of the White Wyandottes. The awards: Frank Sites, 1-3 cock; 1-3 hen; 2 cockerel; 3-4 pullet. George W. Weed & Son, 4-2 cock; 2-4 hen; 1 cockerel; 1-2 pullet.

J. L. Jefferson, Des Plaines, Ill., sent down a number of choice White Rocks

and was there to care for them and to see the show.

There was a fair showing of Rose Comb Buff and White Orpingtons and Diamond Jubilee Orpingtons.

Light Brahma alley would seem lonely without C. P. Nettleton, and coops look unnatural without some of his birds. As usual, he was a winner.

The Polish are always one of the attractive features of the New York show, and this season were out in full force.

George H. Northrup, Raceville, N. Y., judged the S. C. Black Minorcas, and showed in the Rose Comb classes. He was, of course, a winner. The R. C. Blacks owe Mr. Northrup for nearly all their good points and the enviable position they now occupy.

Just a few Faverolles were cooped.

As usual ornamental bantams were much in evidence, the Cochins leading in numbers.

Next time George Weed enters birds at New York for an English fancier, advancing the amount of the entry fees—he won't.

Arthur G. Duston, South Framingham, Mass., made good winnings with his White Wyandottes, taking 1 hen, 2 cock, 2 cockerel and 3 pen. For more than fifteen years Mr. Duston has been intelligently and earnestly working to perfect his magnificent strain of White Wyandottes, and the breeds of America and England have endorsed his work. His winners, and several unplaced birds, were the admiration of all breeders present.

M. S. Gardner, of Gardner & Dunning, Auburn, N. Y., was present. Mr. Gardner reports that the demand for

choice Rocks has exceeded the supply.

George W. Tracey, Kinderhook, N. Y., won first pullet in S. C. R. I. Reds, and another pullet of his taking the special for the best colored Single Comb female. Mr. Tracey is one of the best Red breeders in America, and does business on the square.

Arthur Trethaway, Wilkesbarre, Pa., showed a string of his choice S. C. Black Minorcas, winning a number of the most desired prizes.

Owens Farms, Vineyard Haven, Mass., were in evidence with White Wyandottes, White Rocks, Orpingtons. To them was given a number of the choice prizes, on birds of great merit. These people are "quality" breeders, and are holding closely to the true type of the breeds they handle. Theirs are the flock-founder kind.

Rock Hill Poultry Farm, Ossining, N. Y., F. W. Corey, manager, made winnings in every class of Rocks, Wyandottes, Bantams and Orpingtons in which they had entries. Mr. Corey is an able and painstaking fancier, keen and always active, and is building up for Rock Hill Farm a great and good reputation.

Watson Westfall, Sayre, Pa., had his string of Silver Gray Dorkings on show, winning nearly every first prize. There are no Dorkings in America superior to these.

Willow Brook Farm, Berlin, Conn., made a good showing with their Orpingtons, getting valuable prizes.

D. W. Young, Ridgewood, N. J., showed some of the magnificent S. C. White Leghorns for which his yards are now famous. Of course he was in the winning.

W. M. Bell, Ringwood, England, had on show a number of his Black Orpingtons. Mr. Bell is England's most famous breeder of this variety. He made a number of important sales. As he put it, "the American fanciers want the best in the world, and have the money to pay for it."

William Cook & Sons, Scotch Plains, N. J., originators of all the Orpingtons, had a display that attracted great attention. As will be seen, they were heavy winners.

Philip Caswell, Newport, R. I., one of the foremost Rhode Island Red breeders in America, won several important prizes. His winning males were exceptionally fine. Mr. Caswell is a true fancier, and it is a pleasure to deal with him, and profitable for his customers.

Exmoor Farm, Lebanon, Pa., won extensively in the various classes. They were in the money all the time.

Mattison & Dutcher, South Shaftsbury, Mass., had on show a number of their blue-bred Buff Wyandottes, taking a goodly lot of prizes.

W. T. Lord, Troy, N. Y., was a heavy winner with his Buff Wyandottes. He says he wishes that the challenge he sent out had been accepted by a number of Buff Wyandotte breeders.

The following poultry journals were represented, each having an attractive booth: Reliable Poultry Journal, Poultry Success, Commercial Poultry, American Poultry Advocate, The Feather, Farm Poultry, Poultry Husbandry, American Stockman, Inland Poultry Journal, American Poultry Journal.

Incubator and brooder manufacturers and poultry supply dealers were repre-

MILLER'S W. P. ROCKS

WIN AGAIN AT ST. LOUIS. MISSOURI

At the St. Louis Show Jan. 8 to 13, 1907, I won 3 firsts, 2 seconds, 3 thirds, 1 fourth, silver cup for 10 highest scoring White Rocks and sweepstake silver cup for 10 highest scoring birds in American class.

At the Mo. State Show Dec. 11 to 14, 1906, I won 4 firsts, 3 seconds, the sweepstake silver cup for best shaped Ply. Rock cock, the Ivory Soap cup for whitest bird in the show, and 6 other specials.

At the Ills. State Fair October, 1906, I won 5 firsts, 3 seconds and 2 thirds. This shows the quality of my birds. Wherever I showed I won more prizes than any competitor. EGGS, \$5.00 per 15.

WM. MILLER ... FAIRLAWN POULTRY YARDS
BOX ONE, CRESCENT, ST. LOUIS COUNTY, MISSOURI

**The only roofing
sold on a money-
back guaranty.**

READ OUR TRIAL OFFER.

Paroid Roofing

IF YOU want the most *durable* and most economical roofing you can buy, please read the guaranty we give on *Paroid*.

We *can* and *do* give you this guaranty because *Paroid* is the best ready roofing ever made.

If you will compare a sample of it with others, you can *see* and *feel* the difference.

Use your own judgment.

Put your samples out in freezing weather and then try to bend them.

Paroid will be soft and pliable.

The others will all break and crack!

The difference is in the way they are made.

We make the felt for *Paroid* in our own mills, established in 1817. We know how and we take no chances.

Other manufacturers buy their felt, the most important part of ready roofing, where they can get it the cheapest, and run big risks at the very start.

We *saturate* the felt in a compound of our own, that renders every fibre of it water proof. *Soaked*, mind you, not merely dipped.

We coat it with the *toughest*, *strongest*, *thick-*

est, smoothest, most flexible and most durable coating used in any ready roofing ever made.

You can see and feel that for yourself.

Then we give you with every roll of *Paroid* a complete roofing kit, containing our patented caps—the only rust-proof cap made.

Water can't rust them and cause them to work loose and spring a leak as *all other caps* do.

These are some of the reasons why *Paroid* has stood the test of time for the United States Government here and in Cuba and the Philippines, for railway companies, manufacturers, farmers, dairymen and poultrymen *everywhere*.

Send today for *free samples*. Enclose 4c in stamps and we will send you our new 48-page book of plans for practical farm and poultry buildings.

If your dealer will not supply you, send to us direct. We pay the freight.

F. W. BIRD & SON,

13 Mill Street, East Walpole, Mass.
1413 Monadnock Bldg., Chicago, Ill.

BUY one lot of *Paroid*; open it; inspect it; apply it to your roof, and if then you are not satisfied that you have the *best* ready roofing made, send us your name and address, and we will send you a check for the full cost of the roofing including the cost of shipping.

sented as follows: Prairie State Incubator Co., Cyphers Incubator and Brooder Co., Star Incubator Co., Pine-land Incubator Co., Model Incubator Co., Cornell Incubator Co., L. B. French Brooder Co., Cousins Incubator Co., Trenton Incubator Co., E. F. Hodgman Incubator Co., Spratt's Patent, Sanitas Co., Excelsior Supply Co., George L. Harding, Donavon & Burns, Standard Paut Co., L. B. French Co., F. C. Sturtevant Co., A. I. Root Co., I. J. Stringham.

"After all, it's the oil," said many incubator operators who are using Wyandotte White Oil. Mr. D. H. Myers, representing the Wyandotte Refining Co., of Cleveland, Ohio, was busy all week receiving these testimonials and furthering the interest of this superior oil.

A representative of the Japanese government was an interested visitor. He purchased a breeding pen each of white Wyandottes, White Rocks, Black Orpingtons and Buff Orpingtons and will forward them on to Japan.

Aug. D. Arnold had on show twenty-six of his choice Columbian Wyandottes. Mr. Arnold is always a leader. His winnings are as follows: 1-2 cock; 1 pullet; 4 pen. Specials as follows: Silver cup for best display; silver cup for best cock, hen, cockerel and pullet; silver cup for female with best wing; silver cup for male with best hackle. Special for 4 best cocks; special for 4 best hens; special for 4 best cockerels.

THE POULTRY BREEDER AND THE TRAP NEST.

By J. A. Bickerdike, Millersville, Ill.

The popular idea with many poultry breeders concerning the trap nest is that its sole purpose is to weed out the drones and to ascertain which are the best laying hens. They see its great value for the market poultryman, and especially the egg-farmer, but seem to think that its usefulness stops with that.

Such an idea is far from correct. The trap nest is of greatest value to the breeder of standard bred stock, without the trap nest, he is "going it blind" as much as is the business man who does not keep a set of books.

In what ways may the trap nest be of assistance to him? There are many. I will speak briefly of my personal experience with the trap nest in the breeding yards. During the past season an exact trap nest record has been kept of our hens, numbering each egg with the band number of the hen which laid the egg, keeping each hen's eggs separate from other eggs when hatching, and giving each hen's chicks a distinct mark when hatched. The information thus gained is worth to me many times the work and expense taken to keep such a record, and I would not think of breeding poultry without such a system.

In a flock of 100 hens, there were 40 from which we did not get an infertile egg. From some hens every egg was infertile. From some hens every egg was fertile but all died in the shell. From several hens we got a good chick from every egg set. Hen No. 19 has a record of 217 eggs laid during the past year, and although every egg was set during the hatching season, we did not get a chick from her. Most of her eggs were fertile, but the chicks died in the shell. Hen No. 24, kept in the same yard, has laid 239 eggs in the past 12

LEE—the name
insures quality

You can hatch and raise chicks **sometimes** in any incubator—when every **outside** condition is favorable, but with

"Mandy Lee"

Incubators and Brooders

you take no chances. Hatching conditions can always be made right in the egg chamber of the "Mandy Lee" regardless of what outside conditions may be.

It's the one incubator in which every element of doubt and uncertainty is removed. The three essentials of a successful hatch—**heat, ventilation, and moisture**—are under perfect and separate control of the operator **all the time**.

Double walls, and top packed with layer upon layer of cotton-batting, cardboard and asbestos. Made of Redwood or White Pine.

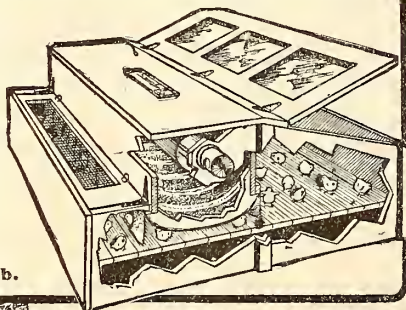

Handsome, substantial, and **always** gives satisfaction.

Catalog Free tells other hows and whys. Also tells all about our **direct contact heat Brooder**—the only Brooder made that provides natural brooding conditions for the chicks.

GEO. H. LEE CO.

Dept. 78,

Omaha, Neb.

months, every egg set during hatching season, and all hatched but five, only one of which was infertile. Of what value is this to me? It is this: When I set eggs from such hens as No. 24, I am almost certain of chicks. Other hens, such as No. 19, I can cull out, even though she be a 200 egg hen. Last year hen No. 84 produced my finest specimens. This year I know what to expect from her. The past season I have had eleven of my best laying hens mated to a cockerel from hen No. 1, a 200 egg hen. Does like beget like? Then I have a right to expect some valuable chicks from this mating.

The combination of fancy and utility, which is so much desired and so rare, is easily secured with the aid of the trap nest. Mate as good a cockerel as can be secured, whose ancestors are 200 egg hens, to your prize winning hens, and note results. To the pullets from this mating that make good egg records mate a prize winning male bird, and so on. In this way a fancy and utility strain may be easily produced in a very short time.

The trap nest adds untold interest to the work of the poultry breeder. He can study the results of his matings as easily as if he had but one hen. Perhaps your prize winner lays infertile eggs. Perhaps some other hen in the pen is producing better chicks than the prize winner, and you ignorant of the fact. Next season change male birds and note results from each hen again. In that way more exact knowledge can be obtained in a few years with the trap nest than in a lifetime without it.

The great advantages of the trap nest in the breeding yards is not fully realized even by its most ardent advocates. It cannot be fully appreciated by any one till he has pedigreed his stock year after year, each-year adding to the value of his work. What a satisfaction it would be to a breeder to know the ancestry of that prize winning pullet, back ten or twelve generations, and know for a certainty the egg record, score, winnings, etc., of each ancestor! And this would not only bring satisfaction to the breeder, but would add greatly to the cash value of the bird.

The great possibilities of poultry breeding assisted by the trap nest is unlimited. As a science it is only beginning. What the future will bring forth we can only guess. Time alone can tell.

The time is not far distant when the specialty poultry clubs will adopt a system of registration whereby a breeder may have his birds registered, and a non-registered bird will be as worthless, as a breeder, as is the non-registered horse. The trap nest makes such a system as this possible. With it a pen of 10 or 100 hens may be pedigreed as easily as a pen of one hen.

If a breeder of standard bred horses, or cattle, or hogs, or sheep, or any other stock (except poultry) failed to pedigree his stock in this twentieth century, where would be his business two or three years hence? Will the poultry breeders keep abreast of the times? Will they keep pace with their brother breeders of other stock? I believe they will. Then we must pedigree our birds.

SHIPPING BIRDS BY EXPRESS.

It seems to us that those who raise fancy birds for sale should be a little careful in shipping the same so that there need not be any more expense than is necessary when we pay the express charges. It seems to us that shippers should have some respect for the buyers and should ship their birds in as light coops as possible, and not in dry goods boxes or boxes that are made up with inch lumber. Anyone who has ever had any experience with express companies knows that their charges are high enough when birds are shipped in the lightest coops. Any first-class breeder will always ship in light coops, and it is only the breeder that makes a few sales a year that will ship in large, heavy boxes.

Last fall a friend of ours ordered a cock bird shipped by express. The bird weighed eight pounds and the box sixteen. The fact is that the box was much longer than a cracker box, and it was made of inch lumber in the ends and bottom, while the sides were half-inch lumber. The person who made the purchase was completely disgusted when he received the bird and found what the express charges were. Of one thing you may rest assured, and that is that the party who sold the bird will never sell another one in this section of the country.

Sellers should remember that buyers are not Chicago millionaires, and that they should have some sense of respect shown them when birds are shipped to them. James Lawrey.

WHY Don't You

Build Your Own INCUBATORS

And Brooders? Thousands Are Doing It. Just Send for Our

FREE PLANS

And See How Easy and Simple They Are. We Furnish All Parts Such As Lamp, Regulator, Tank, Legs, Doors, Hardware, Etc.

HOW IT IS DONE

The first thing that occurs to many who read our advertisements, is that it is impossible for them to build their own machines.

This is a mistake.

If it were not we would not be in business.

Our business would not have grown to be the largest of its kind in the world. Our success depends upon the success of our customer.

Over eighteen thousand people became interested in our plans last year.

That is certainly good proof that anyone can build their own machines with our plans and fixtures.

Why not you?

You can, and we'll tell you why.

We have worked and studied on these plans and fixtures until we have made them so simple and easy that a boy 12 years old can follow them successfully.

Now we don't want you to even take our word for this. We want you to decide the matter yourself.

All we ask is the privilege of placing in your

hands at our expense a copy of our Free Catalog and Book of Plans.

If these fail to convince you, then we have nothing more to say and you'll be nothing more out.

We want you to see with your own eyes how clearly every step of the work is pictured out and described.

We want you to see how easy it is for you to build a high-grade, modern Incubator or Brooder, having many exclusive features (all in favor of the inexperienced operator) which are not to be found on any other machines made.

We want you to see how you can make a machine for less money than the same could be bought for if it were on the market.

If you are going to buy a ready made machine, don't do it until you have investigated these plans.

We furnish all the parts such as lamp, regulator, tank, legs, doors, hardware, etc., not possible for you to make, at a special low cost.

If You Have An Incubator

or Brooder, it will pay you to send for our Catalog and plans. It describes our latest improved

Acme Automatic Lamp and

Acme Compound Wafer Regulator

which can be attached to any make of incubators and brooders, and which will save you one-half the oil and labor and all the annoyance so common with the ordinary lamps and regulators.

Here's some of the reasons:

Lamp holds over one gallon; top lifts off like bucket cover making it easy to fill. No funnel needed; no spilling or wasting of oil; safely filled when operating; can't be upset; no danger of fire.

Automatic valve keeps oil always same height on wick insuring uniform flame, steady heat. Combined damper and flame regulation shuts off oil consumption when heat is not needed.

Acme Mineral Fibre Wicks do not burn or char—require no trimming. Acme Burners are air cooled—can't over-heat. No danger of explosion or fire. No smoke, no soot, no odor.

Acme Compound Wafer Regulators are sensitive and accurate to a fraction of a degree, also positive in their action; require but one adjustment, flame regulation does the rest.

Acme Lamps and Regulator are made to fit any machine. Sold singly or together. You ought to get this free catalog and read all the reasons why it will pay you to put on this lamp and regulator on your old machines.

If you have no machines don't fail to send for catalog and plans and get the right start.

HOW'S THIS

H. M. Sheer Co., Quincy, Ill. June 2, '06

Gentlemen:—My daughter who is only eleven

years old, superintended all the hatching this season. She succeeded in hatching 100 per cent in two hatches and never below 75 per cent of the fertile eggs.

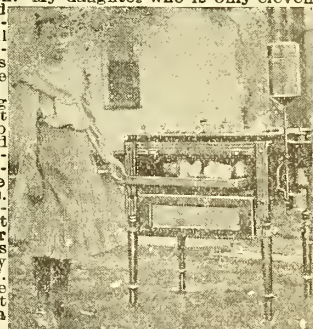

The incubator built from your fixtures virtually runs itself. Everyone says that they are in a class of their own. W. N. Middleton, Assumption, Ill.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

THE COMING SPRING.

Although winter still holds the country in its chill grasp, there is a thought of spring in the air. Already the florists' catalogues are being sown broadcast over the land, and the hope, which is as perennial as the blossoms themselves, springs anew in the heart of every flower lover, that some way, somehow, the seeds which she orders will blossom in the same wonderful profusion and brilliant coloring which the pictures show. Now, while the long winter evenings still keep us indoors, is the time to plan the garden, and prepare to order the seeds, so that they may be on hand when the propitious day of sowing arrives. The editor wishes that she might impress upon the mind of every reader of this department the earnestness which she feels in urging each one to do at least some little thing toward making the world beautiful during the coming summer. It is not necessary to have a large garden in order to do this, and there is no home so humble that it may not be made a veritable beauty spot, to give pleasure not only to its owners, but to

every passer-by. The simplest flowers are the most effective, and a few vines, trained over the house, or across an old fence, will grow without tending, and cover many a bare spot with a living drapery of green. A 5-cent package of poppies will give riotous bloom, not only during the present summer, but for years to come. A package of portulaca will make a gorgeous spot of the sand heap where nothing else will grow. If money is scarce, there are still plenty of blossoms to be had for the taking. Nearly all of our wild flowers stand transplanting, and thrive even better, in a garden plot, than in their native haunts, if a little care is taken to give them about the same amount of shade, and if possible, the same soil as that in which they originally grew. Much is being said, all over our land, about civic improvement. If every woman who reads this will resolve to do her share, even though it be a small one, the first step will be taken in solving the problem. The work is so little, and the results are so disproportionately great, that those who once try to cultivate at least a few bright flowers and raise vines, will find an exceeding great reward.

CONCERNING APPLES.

This is the time of the year when apples taste their best. There are many delicious ways of cooking them which are not commonly known, and which will make pleasing changes in serving them. One of these is apple custard, which is made by paring and coring enough apples to cover the bottom of a baking dish. Put a tablespoonful of sugar in the center of each apple and bake until they are tender, but not broken. Make a custard, flavoring it with vanilla or grated cocoanut, pour it over the apples and bake until it "sets," then pour over it a meringue made with the whites of two eggs, which have been omitted from the custard. Brown it a moment in the oven. Serve cold.

Apple snow is another dish which is dainty enough to be the finishing touch to a company dinner. Pare and core six good-sized apples and cook them in two tablespoonfuls of water, to which has been added a little lemon peel. When quite soft add half a cup of finely-granulated or powdered sugar and let them cool. Then whip in the whites of two fresh eggs and beat with an egg beater until the apples and egg form a stiff snow. This is better the longer it is beaten. For an emergency dish, which must be prepared at the last moment for unexpected company, grate raw apples, sweeten them, and whip immediately with the whites of two eggs, adding a little flavoring to taste. This must be done quickly, or the apples will turn dark colored. Serve in glass dishes or sherbet glasses.

A favorite apple dish in one family where the American Poultry Journal is a monthly visitor, is made by paring and quartering firm, tart apples, and placing them in an earthen baking dish. Over them is sifted a little flour,

What a Lucky Man Got Last Year

\$100.00 Cash in American Poultry Journal's
Subscription Contest

(CHICAGO, ILL. JUN 27 1906 190 No 7398)

THE First National Bank of Chicago

PAY TO THE ORDER OF

S. M. Yoder \$100 00

One hundred and no 100 DOLLARS

AMERICAN POULTRY JOURNAL PUB. CO.

Per *Geo. S. Bates* Pres.

P. Thompson & Co., Chicago

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sells on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize. Wishing you and the Journal success, I remain

Very truly yours,
S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

you can get premiums worth another \$100 or more, and you have your choice of 100 different premiums.

All Who Send Us Five Subscriptions

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

American Poultry Journal Publishing Co., - Room 510, 325 Dearborn St., Chicago, Ill.

sugar to taste, and bits of butter are added. Then hot water is poured over them, they are covered closely and cooked until they are a deep red all through, and almost jellied. The long cooking is the secret of their goodness.

Not every cook knows that stewed apples may be given infinite variety of flavoring by adding bits of lemon peel, cloves or pieces of stick cinnamon. Pineapple, either grated or sliced, which can be procured at any grocery, will go twice as far, and taste exactly as good if an equal amount of stewed apples is added to it, and cooked for a few moments with it, then allowed to cool. And, by the way, does everyone know what a delicious cake filling can be made by taking the combined apple and pineapple, where the grated kind is used, straining off all the juice and mixing the apple with powdered sugar? This is a good way to use up the "left-overs" which are not enough to serve for sauce at another meal.

Just one thing more and my apple chapter is finished. No matter how plain your supper may be, and how little time you may have in which to prepare some specially dainty dish to help out, don't worry. If you are fortunate enough to have a pitcher of cream on hand, just put it on the table, by the side of a dish of common stewed apples, over which you have grated half a nutmeg. The combination will be so good that everyone will forget that the rest of the meal consists of the simplest fare. And the beauty of it is that it takes absolutely no extra time and strength on the part of the busy house-mother. Mrs. T. J. Pierce.

Springfield, Mass.

EXPERIENCE DEPARTMENT.

Mrs. P. J. Morgan, Englewood, Ill., sends a number of practical kitchen hints. She always saves the tops of

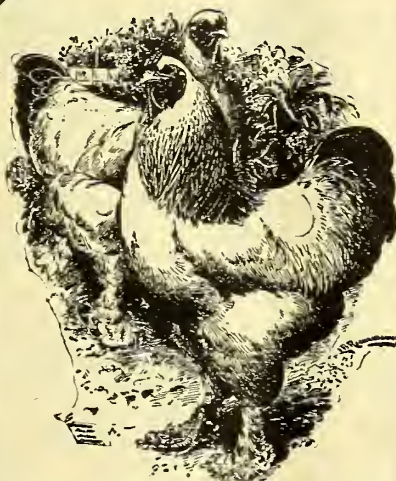

First prize S. C. Brown Leghorn cockerel at Iowa State Fair, 1906. Bred and owned by A. E. Banta, Wheatland, Iowa.

old shoes which are too worn to "pass along" to some needy person. They make the best kind of lining for iron-holders, as they do not heat through.

She also keeps a piece of sandpaper at hand, with which she rubs off the top of the cook stove before blackening it, as it removes all rough places caused by anything that has been spilled.

Mrs. Kissinger, of Yuma, Colo., says: "I wonder if the readers of the Home Department know what it means to live in a prairie country where every bit of fruit must be shipped in, at considerable expense. Sometimes we are unable to get it at all, and as a result we have found how to make the best of the possibilities which are offered to us. There is always dried fruit to be obtained at the grocery stores in even the little places of eastern Colorado, and I have discovered that delicious jam and jelly can be made from even this unpromising material, while at the same time the saving in money over the fresh fruit is very large. For instance, 25 cents' worth of evaporated plums and 10 cents' worth of dried raspberries will make a good quantity of jelly that is really fine. I wash the fruit, then soak it over night in plenty of water. In the morning I cook it in the same water, combing half plum juice and half raspberry, and the result is a delicious-flavored jelly. The plums need not be wasted, either. Put them through a sieve, add soft stewed apples, run through a sieve again, and you will have plum butter, as good as though fresh plums had been used. If the peach crop is a failure, and the family are clamoring for peach butter, buy one of the gallon cans of peaches at the store, cook them up soft, add apple sauce, put through a sieve, and the result is peach butter which cannot be told from the fresh

We Want to Tell You About 3000 Prizes

This is the record made in eight weeks by birds from our Great Central Poultry Farm, and we are willing to have it compared with that of any other poultry breeder in the entire country.

These prizes were won in fair and square competition, and were awarded by America's most competent poultry judges.

This is the kind of stock we offer for sale, and which you get when you buy birds from the Great Central Poultry Farm. We can supply thousands of them bred on the same line as our prize winners.

Our experience as successful breeders of poultry covers a period of thirty years. Our stock includes all the popular and best paying varieties, including Light and Dark Brahmas; Barred, White, Buff, Silver Penciled and Partridge Plymouth Rocks; Silver, Golden, White, Buff, Partridge, Silver Penciled and Columbian Wyandottes; Black Javas; American

Dominiques; R. & S. C. R. I. Reds; Buff, White and Partridge Cochins; R. & S. C. Brown Leghorns; S. C. Buff Leghorns; R. & S. C. Black Minorcas and S. C. White Minorcas. All varieties of Polish; Black B. Red Games; White and Cornish Indian Games; Silver Spangled, Golden Spangled and Black Hamburgs; Anconas; Blue Andalusians; White Faced Black Spanish; Houdans; all varieties of Bantams; Embden and Toulouse Geese; Pekin, Rouen and Colored Muscovy Ducks; White Holland and Bronze Turkeys, and all varieties of Pigeons, including Homers. Remember that these are

ALL PURE BRED BIRDS

of superb quality. They have been well housed, carefully handled and are free from disease. All eggs sold from our pens are from the same stock that we use in our own incubators; guaranteed fresh, fertile and true to name. We make all shipments promptly. If you wish to secure high quality of stock at reasonable prices send 10 cts. for our new catalog containing full description of the Great Central Poultry Farm, beside many useful articles on the care and management of poultry.

article. Of course everyone knows, or ought to know, that dried apricots make a rich and delicious preserve, if soaked over night, then cooked with plenty of sugar. In fact, there is scarcely any limit to the good things which can be made from the most unpromising looking dried fruits of all kinds if one will only use a little ingenuity in preparing them. My recipe for quinces is too late for this season, but if I give it now it may help someone next fall. I pare and core the quinces, and cook them half a day in unsweetened water, until they are very tender. If sugar is added at first they will be tough, no matter how long they are cooked. After they are thoroughly done, add quartered sweet apples, sweeten to taste, using plenty of sugar, and cook until the apples are tender, but not too soft. Take the cores and paring of the quinces and cook them in plenty of water for jelly. Add apple juice to make a larger quantity. A few quinces will flavor a large quantity of apple juice."

EGG SOUP.

A nourishing dish for an invalid is made by adding to a pint of good soup stock two well-beaten eggs, mixed with a tablespoonful of cream. Heat to the boiling point, stirring constantly so that the egg will not curdle.

IN THE KITCHEN.

Use baking soda when washing lamp chimneys and they will shine like crystal. By using soda in the water tinware can also be brightened, and soda rubbed on tarnished silver while it is being washed will restore its original brightness.

Nothing will give such a polish to glass, even the finest, as washing it with slightly moist newspaper, and using dry newspaper to give the finishing touches.

A little vinegar added to the water in which tough meat is boiled will make it much more tender. If added to the water in which fish is boiled it will make the meat firm and add to the flavor.

When warming up potatoes, crumb in some of the dry pieces of bread which have been left over. Moisten the whole with milk, add a little butter, pepper and salt and see if you are not complimented on the good result.

EGG BALLS FOR SOUP.

Rub the yolks of hard-boiled eggs to a paste, season with salt, pepper and butter. Add enough raw egg yolk to form a paste, roll into balls about half an inch in diameter, cover with the white of egg and roll in flour. Poach them in boiling water just before serving, and put a few in each soup plate.

After reading egg records of different persons in your paper, I would like to give you mine. I started keeping a record from a pen of sixteen White Leghorn pullets February 1, 1906; from this date until November 1, 1906, I find they laid 1,688 eggs and five of them set and raised a brood of chicks each, so I don't think this is a bad record.
H. A. Glazier.

Owl's Head, N. Y.

A 3000 PER CENT INVESTMENT.

We believe that our readers, especially those who breed or contemplate breeding White Plymouth Rocks, would be interested in some details concerning "Hendryx," the cockerel which was recently given the remarkable score of 96¼ at one of Michigan's leading shows. None of our older readers will be surprised to learn that this bird was raised from eggs bought of Chas. H. Ring, Decatur, Mich., for Mr. Ring's White Rocks are in the habit of making extraordinary records, both for himself and for his customers. Mr. Ring makes it a rule not to advertise winnings made by his customers. In the present case, owing to the unusual score of the bird and to the fact that the gentleman who raised him is breeding only for pleasure, he has permitted us to publish the circumstances. Following upon Mr. Ring's big winning at Chicago last winter came an order from Mr. Coy W. Hendryx, a prominent attorney at Dowagiac, Mich., for \$20 worth of eggs from the pens headed by Mr. Ring's first and second prize cockerels at Detroit. Prior to the show this winter Mr. Hendryx sold \$92 worth of birds from these eggs solely on the quality of the stock, as he does not advertise. He retained a sufficient number of the chicks to win for him first and second cockerel, first and third pullet and first pen in one of the largest classes of White Rocks shown this win-

ter in Michigan. First pullet scored 95¼ and the first cockerel scored 96¼. Judge Travis marking on the score card that it was the best White Rock cockerel he had ever seen. Judge

WHITE PLYMOUTH ROCK.
Bred by Charles H. Ring, Decatur, Mich.

Tucker also gave this bird "Hendryx" the highest score he had ever given to a White Rock male. To the best of our knowledge this is the highest score ever given to a White Rock cockerel in

competition. Mr. Hendryx was besieged by offers to buy this bird as soon as the score was published, refusing one offer of \$500 from a well-known breeder who knew where the bird had been bred. A previous arrangement had been made with Mr. Ring, however, and "Hendryx" will head one of the latter's pens the coming season. With Mr. Ring's well-known ability to "put them together right," he and those of his customers who are fortunate in getting their orders booked in time, can hardly fail to get some exceptional results. Were "Hendryx" simply a chance good bird, with ordinary parentage, we should not feel so certain on this point, but he is truly "bred in the purple." His sire won first at Detroit as cockerel, 1906, and his grandsire was first cock at Chicago, 1905. With such ancestry, and properly mated as he will be, such a bird cannot help but stamp his quality strongly on his get.

Mr. Ring's farm of 80 acres is devoted entirely to raising White Plymouth Rocks. Two 160-foot breeding houses, incubator cellar, feed house, and twenty portable colony houses and yards, contribute toward making this one of the largest and most complete plants in the country devoted exclusively to this breed. Free range, plenty of water and shade, supply ideal conditions for raising his prize winners. Mr. Ring has spent years in developing his strain of White Rocks. Beginning

with the best that money could buy, careful mating and rearing from year to year have produced a strain which has not only made it possible for its originator to establish unequaled records at such shows as Chicago and Detroit, but which has brought blue ribbons to his customers from New York to California.

We have personally complimented Mr. Ring before, both upon his winnings and the quality of his stock, but we feel that it would not be out of the way to congratulate him upon his business methods. There are always two questions uppermost in the mind of a buyer concerning the fancier who has stock or eggs for sale: "What has he got?" and "What will I get if I buy?" The experience of Mr. Hendryx, and he is but one of many, offers rather conclusive evidence that Mr. Ring not only has the quality, but, what is more im-

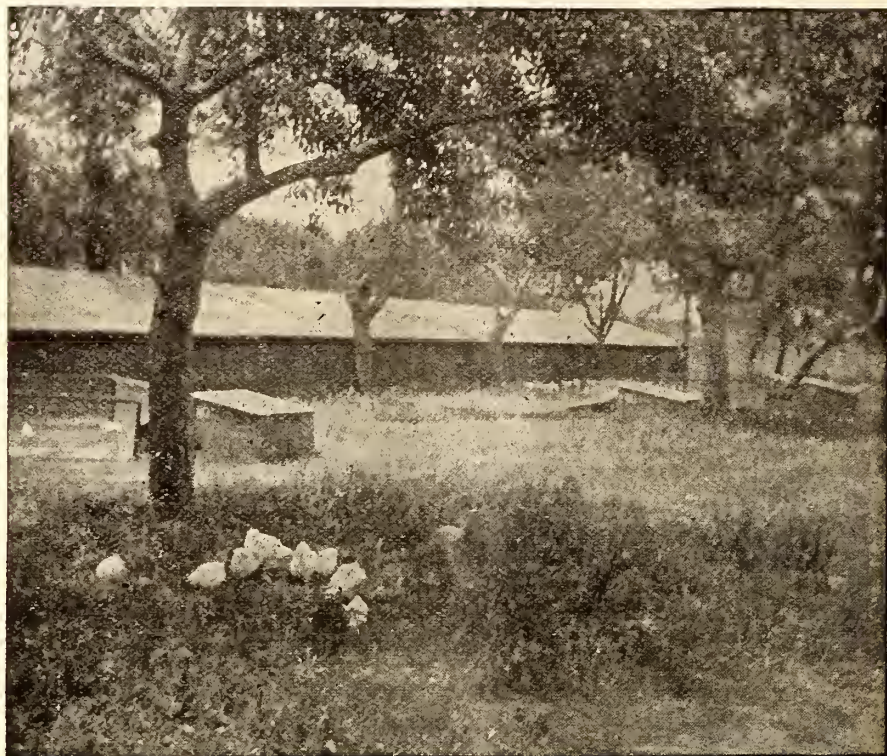

Ring will exhibit "Hendryx" as a cock at one of the big shows next year. Decatur is on the main line of the Michigan Central railroad, 117 miles from Chicago, and it will pay anyone interested in White Rocks to visit the home of "Hendryx," where they will be sure of a hearty welcome.

WHAT BREED?

"What do you breed those things for?"

The above question was asked me by a man of some reputation as a poultryman, and was asked regarding my favorite breed of fowl. The short answer was, "I breed them because they are as good all-around fowl as any breed, and better than some, and, in my eye, the most beautiful of all."

To say that any one breed is the most beautiful would be boasting my

Scene on the Poultry Farm of Charles H. Ring, Decatur, Mich., the White Plymouth Rock Specialist.

portant, furnishes it to his customers. Not that every egg will contain a 96¼ chick, but buyers of his best eggs will get them and stand the same chance of raising the extra good ones that he does.

The experience of Mr. Hendryx bears out the advice so frequently given in these columns that it pays to buy the best, from every standpoint. He might have bought cheaper eggs and more of them for the same amount, but with no likelihood of a return of \$600 for the \$20 invested, a dividend of 3000 per cent. Of course this was an extraordinary case, but the instances have been innumerable when a single sitting bought of breeders with the stock, experience and skill in mating possessed by Mr. Ring, has produced chicks any one of which was worth more than the price paid for the eggs.

Mr. Ring's mating list for 1907 is ready for mailing, and will be sent free to all who send for it. We understand that, in case no accidents happen, Mr.

eye too much, but to say they are as good as the best is not boasting of the Black Langshan, for they have proved themselves as good egg-producers the year 'round as any breed, and better winter layers than most any, if not the best of all; and for a table bird they are as good as any and are coming in favor very fast as a table fowl.

They are large, healthy and lordly in station. Now, I am not so wrapped up in the Black Langshan that I cannot see beauty or good points in other breeds; in fact, I keep other breeds and take pride in them and strive to have them what each breed should be. Here is my advice to all who may read these few lines: Choose the breed that most pleases your fancy, if you have not already done so. Get them purely bred and keep them purely bred, and I will never ask you: "What do you breed those things for?" Never. But I may ask: "Why do you not try the Black Langshan?"

Thomas Reid.
Deckerville, Mich.

WHY KEEP BANTAMS? WHAT GOOD ARE THEY?

By E. J. W. Dietz, President International Bantam Breeders' Club.

In order to answer these questions in a fair and logical manner let us, as it were, stand at one side and take a bird's-eye view of poultry keeping. Poultry culture, as it has been called, may be divided into various classes from various standpoints. There is city poultry culture and farm poultry culture; there is the commercial side of the question and the fancy or ideal side of the question. There is the true breeder or fancier who spends years in perfecting certain characteristics in the fowls of his choice and there is the huckster who, when he gets a call for a rare fowl, seeks to purchase from his neighbor and fills his order with a fowl which fulfills the conditions from its appearance only—its ancestry being to the novice of only secondary importance.

It is not my desire to discuss all these various classes; but let us look at and follow one of the classes mentioned. I said there is the true breeder or fancier who spends years in perfecting certain characteristics. In the history of poultry keeping the men who come under this class in the true sense are few and far between and yet there has been more done by Americans in poultry improvement and development than in any other branch of animal husbandry, excepting, perhaps, that branch which has given us the 1:55 pacer. We get our thoroughbred (animals with specific characteristics) cattle, sheep, hogs and work horses from England or Europe; and yet in poultry culture the leading commercial kinds are American thoroughbred.

The man who has discovered how to mate animals so as to produce offspring with certain qualities of form, color and ability to do work is a creator. He has gained an insight into the Divine and if he has the wherewith to buy bread and

butter, what cares he further for money? When he has developed the Asiatic for size and fine texture of flesh for edible

both," and he gives us the American breeds.

When he has done this he becomes infatuated with his art, and seeing the commercial characteristics practically complete he says "Let us change the coloring on these birds as the eye will be delighted with the live fowl as well as the appetite after it is dead," and behold, we have the partridge, the buff, the white, the black and the various combinations of these. But when we undertake this problem of fixing the color of the feathers we find our difficulties wonderfully increased and it is necessary to keep so many more fowls so the breeder does not have to go too far away from his own strain for new blood; that some, on account of limitation of space, have chosen bantams, the immature of our large varieties, as the means or instrument upon which to practice this creative art.

Further, as the true artist in portraying his ideal presents not the coarse and vulgar but rather the dainty and refined characteristics, so the true poultry fancier delights in the daintiness and refined characteristics of these immature creatures of the poultry world, bantams.

Bantams have, from a filthy lucre standpoint, all the commercial characteristics of the large fowl excepting size, and this is compensated by quality and flavor of the flesh, the less cost of feed and the greater yield of eggs in proportion to the amount of food consumed. In the above statement we are only claiming what has been proved to be fundamental in the laws of animal husbandry. It is a well known fact that large and overgrown animals of any variety or kind are not so prolific as smaller animals of the same species. And this is true as to size; the elephant does not reproduce its kind as often as a queen bee or fly.

And the other statement is likewise true, as has been demonstrated in dairy cattle. The little 900-pound Jersey cow will produce butter fat on less pounds

E. J. W. DIETZ, DOWNER'S GROVE, ILL., President of the International Bantam Breeders' Club.

purpose and has produced the Leghorn so they are literally egg machines, he then says "Let us create a bird betwixt and between with the characteristics of

Direct CONTACT HEAT IN HATCHING

Everybody knows that a hen sits on the eggs when hatching. She must have a reason for it. She doesn't suspend herself several inches above the eggs, and expect to hatch strong, healthy chicks, but she sits right down on the eggs and spreads out all over them covering them all.

The heat that develops the germs in the eggs is furnish by contact of the hen's body with the eggs in the nest. Evidently Nature knew what she was about when she taught the hen how to hatch her young.

We duplicate Nature's way in the

Chambers Incubators

The conspicuous innovation we have made in the Chambers Incubator is in our heating apparatus, in which a cloth diaphragm is placed in such a position as to rest upon the eggs—just as the hen rests upon the eggs in her nest. The warm air which fills the space above the diaphragm is not forced down through it, its duty being to keep the diaphragm warmed to proper incubating temperature rather than to provide hot air for the embryo's breath of life.

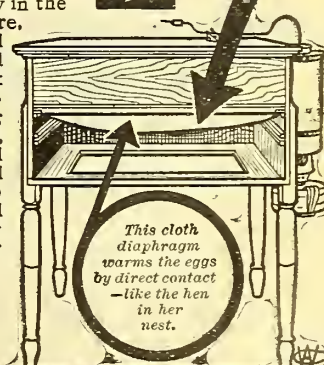

The most careful and skillful construction is employed

to insure an even distribution of heat over this surface; and in addition to remarkable efficiency, the greatest practical economy in oil consumption is assured by not trying to compel the heat to do more than Nature ever intended that it should.

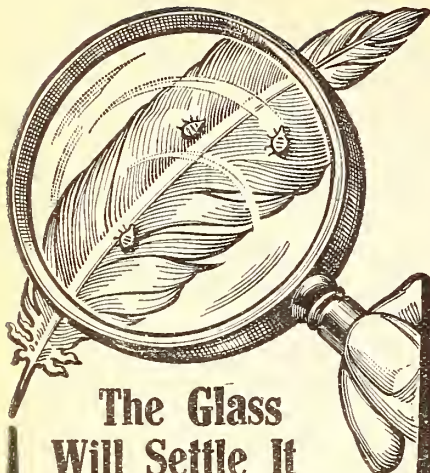

But this is only one of the many improved features found only in the Chambers Incubator. Moisture, Ventilation, Regulation are all handled in a new and practical way, described fully in a book devoted entirely to the Chambers Incubator—the Hatching Machine of quality, sense, science and satisfaction, and which we will send free to all who are interested enough to write for it. A postal card will bring it, and a careful reading will repay you for sending for it. Write now.

Chambers Incubator Co.,
Box 12
Shelbyville, Ind., U. S. A.

NATURE
COPIED
AT
LAST

This cloth diaphragm warms the eggs by direct contact—like the hen in her nest.

The Glass Will Settle It

Wage unremitting war on lice, if you would keep hens with either pleasure or profit. Those little specks so like the color of the feathers, are the gray body lice that suck the very life blood from the hens and make them almost wholly unprofitable.

Instant Louse Killer

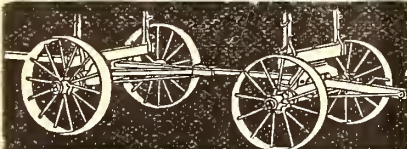

will rid the hens of these dreadful parasites thoroughly, quickly, and with the least trouble to yourself. Kills lice on poultry, horses, cattle, sheep ticks, bugs on cucumber, squash and melon vines, cabbage worms, slugs on rose bushes, etc. It is a perfect disinfectant and deodorizer. Look for the word "INSTANT" on the can—then you have the genuine.

Electric Handy Wagon

Low wheels, wide tires; easy work, light draft. We'll sell you a set of the best steel wheels made for your old wagon. Spoke united with hub, guaranteed not to break nor work loose. Send for our catalogue and save money.

ELECTRIC WHEEL CO., Box 194, Quincy, Ill.

LIKE MOTHER HEN

Only Adjustable Suspension Poultry Brooder made. Thousands in use. Heated by warm water. Temperature always uniform. Warm water tank above chicks with loose flannel covering under which chicks hover. Warmth equally spread and chicks do not crowd. No under-heat to burn their feet. No steps or bridge to climb. No lamp fumes or burnt air to breathe. Should lamp go out the warm water would keep the chicks alive all night. Lamp above chicks, has safety burner, adjusted in height as chicks grow. Shipped on 15 days trial. SEND FOR CATALOGUE No. 65. **Automatic Hatching Co., Detroit, Mich.**

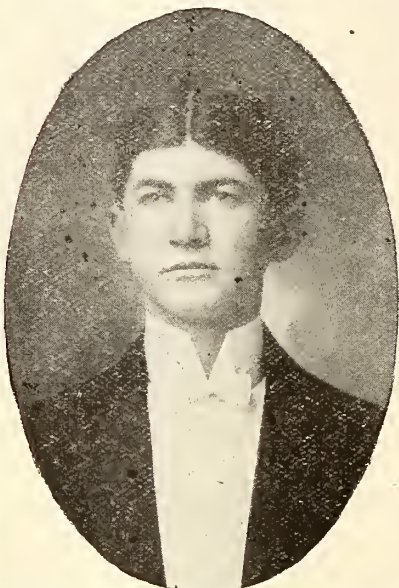

STOCK AND EGGS CHEAP.

45 varieties Standard Bred Chickens, Pigeons, Ducks and Turkeys. Fine Catalog illustrates and tells all about Poultry, feeding, care and our big premium offer. Best way to rid poultry of lice, etc., only 10c. **John E. Heatwole, Harrisonburg, Va.**

of feed than the 1,200-pound Holstein, and so will bantams.

But, as I have already tried to show, bantams are kept more often by the fancier for the purpose of practicing this art of bantam culture. I have no doubt but that every man, if he stopped to think, would reply, when asked why he kept fancy chickens, that he did so because he liked them. But he either does not stop to think or else is ashamed to confess that he has a little hobby which he rides for pleasure. This is a good deal like the young lady, who, after she had taken lessons on the piano for four or five years and was asked to play before some friends, replied, "I do not know how."

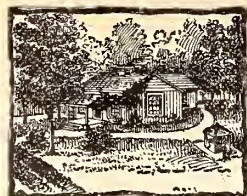

The art of bantam keeping is just as interesting, as educative, as profitable, as grand, as noble, as refining as any other art. In following the art of horticulture the growing of corn and turnips

PETER S. HURT, THORNTOWN, IND.
The famous Indiana Single Comb Buff Leg-horn Breeder and Fancier.

is not much fun, but when one tries his hand at roses, orchids, violets or chrysanthemums we find our work much more difficult, and if we have the true artistic disposition the difficulties stir us to greater care and study, and he who is successful in rearing these flowers is worthy of fame. So with bantams; they are the flowers of poultry culture, and he who succeeds with them has achieved something. The painter who takes his primary colors and with a master hand reproduces the lord of the desert on canvas is not as great as he who can take two bantams and, mating them together, produce the typical bantam of ideal type and shape, because the former is dealing with dead things which are entirely under his control, while the latter is dealing with life—real, pulsating life—and thereby emulating the functions of the Divine Creator, and who is greater than He?

A. L. Fawcett, of New Albany, Pa., has some choice Buff Plymouth Rocks, both males and females. He says that they have the color and the egg laying habit. He has fifty choice breeders for sale and stock can be returned if not satisfactory. The reports from his customers to whom he has sold eggs are very satisfactory, as they are all well pleased with the stock they raised.

BRONZE TURKEYS IN THE LATE REVISED STANDARD.

Brother judges, what are you doing in regard to cutting for lack of an edging of white on feathers of back and wing-bows of Bronze Turkey females?

Giving it a deaf ear, I suppose. In describing Bronze female on page 251 the Standard says:

"Plumage similar to that of male, except an edging of white on feathers of back wing-bows, breast and body."

If they had substituted black for white in back and wing-bows it would then be in the spirit of nature. All thoroughbred Bronze Turkeys, both male and female, have an edging of black on feathers of back and wing-bows instead of white, as so stated in the Standard.

This is, however, an oversight, whether through mistake or intentionally. I in no way wish to censure anyone, but suggest that this, with a few other sections, be looked after at the next revising of the Standard.

The work in the illustration by Mr. Sewell is extremely good, both in shape and color, but, however, he leaves the gap just a little down. I would suggest the tail on male birds be a little broader, longer and raised a little higher, say three inches, as it shows to be an undeveloped tail. His fluff behind thighs should be lowered a little, say one inch. He would then be what I would term an ideal bird.

The tail of the female is to the reverse—too long, say three inches, and just a trifle broad. Her lesser tail coverts are too much in abundance.

Right leg should be set forward a trifle to give it a more natural position.

Her breast and fluff should show the edging of white more distinct.

She would then be what I would term an ideal bird.

We should by all means have a thorough description of Bronze female color in the next issue of Standard instead of saying female similar to that of male.

S. H. TAYLOR,
President N. B. T. Club, Vandalia, Mo.

SILVER PENCILED PLYMOUTH ROCKS.

At the Auburn meeting of the American Poultry Association, held the second week in July, at Auburn, N. Y., the Silver Penciled Plymouth Rocks were admitted as a Standard variety, description to go in the Standard when it is next revised in 1910. According to the new constitution, which was adopted at this meeting, we cannot get the Standard for this variety or any other printed in the Standard of Perfection except at the time of general revision once in five years; nevertheless, they were accepted as a Standard variety and will have their proper place in the Standard when next revised. The proposed Standard for this variety of the Plymouth Rocks was as follows: Shape and weight the same as all varieties of Plymouth Rocks; disqualifications the same, except the color of legs shall be yellow or dusky yellow; color and markings of plumage the same as that of the Silver Penciled Wyandotte.

This variety of the Plymouth Rock family has improved very rapidly in

the past three or four years and their beautiful plumage should soon place them among the most popular of the fancy breeds.

ROCK HILL POULTRY FARM.

The winnings made by the Rock Hill Poultry Farm, of Ossining, N. Y., at the late Madison Square Garden show fulfilled the prediction made by us in these columns last August, when, after a visit to this farm, we said that the stock on this farm would be heard from at the shows this winter. The following record shows that we were correct in our prediction: On White Wyandottes they won third cock, first cockerel, second and fourth pens; on

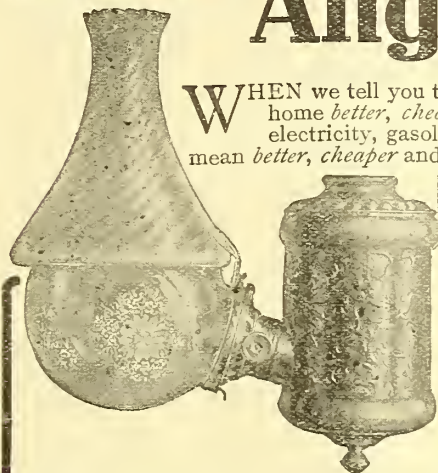

Silver Penciled Plymouth Rocks, first, second, third cocks; first, second, third hens; first, second, third cockerels; first, second, third pullets; first and second pens; on S. C. White Leghorns, fourth cockerel, third pen; Partridge Wyandottes, fifth cock, fifth pullet.

Their winning on Silver Penciled Plymouth Rocks is a most notable one, as they won all prizes in this class.

Mr. Corey, the manager of this farm, is to be congratulated on the magnificent manner in which he is bringing this farm to the front, and our readers need not hesitate to favor this farm with their patronage, as they are assured of fair and honest treatment. Write for their 1907 catalogue and mating list, and mention American Poultry Journal.

The Famous

Angle Lamp

WHEN we tell you that The Angle Lamp will light your home better, cheaper and more satisfactory than gas, electricity, gasoline, acetylene or any other light, we mean better, cheaper and more satisfactory and are ready to back these statements with proof.

For our lamp is constructed on a new principle of oil lighting (patented by us) which completely does away with the smoke, odor and bother of the ordinary lamp and yet makes "The Angle" so much cheaper to burn than even the ordinary lamp that it PAYS FOR ITSELF.

Better Than Gasoline.

Because all gasoline lights use mantles. And all mantle lights are intense, glaring, penetrating. That is why one conscientious American manufacturer tries to give his mantle at

least a little of the soft yellow tone which makes the kerosene light. And absolutely refuses to make a "pure-white" mantle. For he knows what all students of lighting methods know—that the "pure-white" mantle creates a light so intense, so penetrating, that like the X-Ray it pierces the retina of the eye, soon causing blindness. And yet some people, because the very penetrating qualities enable them to read at a long distance as from the fixtures, still use such eye-destroying lights.

Then, too, gasoline is one of the most dangerous illuminants; while the constant breaking of the delicate mantles makes it expensive far beyond the cost of the fuel.

The Angle Lamp, on the other hand, while giving a light of the finest quality known to science, is absolutely safe, requires little attention and never gets out of order. Mr. E. C. Parmelee, Highlands, N. J., sums it up briefly in a recent letter, "My Angle Lamps," he says, "have saved 20 times their cost in oil, burners, chimneys and cuss words."

Better Than Acetylene.

"The Acetylene Light" says Dr. David T. Day, Chief of the mining and mineral resources division of the U. S. Geological Survey, "is even more glaring indoors than the arc light outdoors." Dr. Day places Acetylene as the worst of all artificial lights for home use—more penetrating and more harmful than the mantle lights.

But Acetylene has a worse feature, even than this—the danger. It is one of the most explosive and probably the most penetrating gases known to science, so penetrating is it that it sifts through even the vapor with which all acetylene generator manufacturers presume to

seal the gas-storage tanks. And don't think a large quantity need sift through to cause trouble. For any mixture of acetylene and air from one part of gas to three of air, up to one part gas to 40 parts of air may explode!

How strong the contrast between this dangerous system of which you never can be sure and the safe, clean Angle Lamp, which, because of its double fount construction and "angle" flame, absolutely cannot explode. And how strong the contrast between the intense, eye-straining acetylene light and the soft, warm, restful Angle Lamp!

Better Than Ordinary Lamps.

"The oil lamp," says Dr. Day, in another part of the article above referred to, "yellow, steady, fairly soft, is still the supreme reading light in general use." This splendid kerosene quality of light forms the only ground for comparison between our lamp and the old fashioned l. d. Because The Angle Lamp is an entirely new principle of oil lighting which, while generating a far better and more brilliant light than the old style lamp, has completely done away with all the smoke, odor and bother of the old style lamp.

The Angle Lamp is lighted and extinguished as easily as gas. It requires filling only once or twice a week, which may be done with abso-

lute safety while the lamp is lighted. It never smokes nor gives the slightest odor whether the light is turned at full height or turned low like gas. It is absolutely safe.

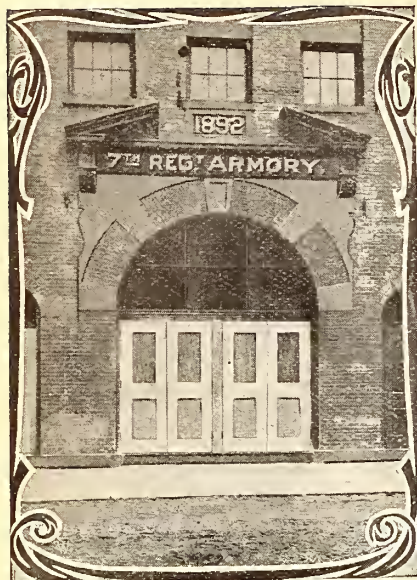

And yet the very features which make The Angle Lamp the most convenient light ever invented by giving perfect combustion of oil, make it also the cheapest. For one quart of oil burns 16 hours. Figure what that means in economy!

Now if you have read this advertisement closely you understand why we offer to prove what a completely satisfactory light The Angle Lamp is by sending any lamp listed in our catalog "59" on

30 DAYS' TRIAL.

And you will understand why such people as ex-Pres. Cleveland, the Rockefellers, Carnegies, etc., who care nothing about the economical features of the Angle Lamp have chosen THIS oil-burning lamp for lighting their homes and estates in preference to gas, electricity, acetylene or any other system. The Angle Lamp will please you as it does thousands of others. Write for our catalog 59, listing 32 varieties from \$1.80 up, and giving you information about all lighting methods that would cost you hundreds of dollars to collect.

The Angle Mfg. Company, 78-80 Murray Street, New York.

The eleventh annual exhibition of the National Fanciers' and Breeders' Association, held at Seventh Regiment Armory, Chicago, January 23 to 30, was one of the best, most important and well patronized shows given by this popular association.

From Canada on the north to Mississippi on the south came stock, while the eastern, central west and west was largely represented in the entries.

The Chicago Show is an exhibition of quality rather than great quantity. While this is a fact, the management was forced by the large entry to double-deck a portion of the show.

The cooping and floor arrangement was on new and very pleasing lines, the new coops presenting a very pretty appearance.

As a sales mart the Chicago Show has a reputation which brings hundreds of buyers and sellers together here annually. This year, as usual, the sales of stock were numerous, some very high prices being received. Manufacturers of incubators, brooders and other appliances, foods, etc., recognizing this fact, are always present in large numbers with extensive displays. The Midway of the Chicago Show is a feature presented by no other exhibition of the kind in America.

The judging of the classes was as follows:

O. P. Bennett, Washington, Ill.—Buff Cochins, Black Cochins, Partridge Cochins, White Cochins, Black Langshans, White Langshans, Buff Plymouth Rocks, Pet Stock.

Chas. T. Cornman, Carlisle, Pa.—Houdans, Hamburgs, Javas, La Fleche, Jersey Blues, Polish, Andalusians, Indians, White Minorcas, Black Minorcas, Spanish, Malays, Pit Games.

E. J. W. Dietz, Downers Grove, Ill.—Exhibition Games, all varieties Bantams, Silkies, Sumatras, Sultans.

Geo. A. Heyl, Washington, Ill.—Turkeys and Water Fowl.

D. J. Lambert, Apponaug, R. I.—White Wyandottes, Buff Wyandottes, Brown Leghorns, Light Brahmas, Dark Brahmas, S. C. Rhode Island Reds, R. C. Rhode Island Reds, Crevecoeurs.

T. F. Rigg, Iowa Falls, Iowa.—Black Wyandottes, Columbian Wyandottes, Golden Wyandottes, Silver Wyandottes, Silver Penciled Wyandottes, Partridge

CHICAGO SHOW

JAN. 23-30. 1907

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

Wyandottes, Spangled Wyandottes, White Leghorns, Black Leghorns, Buff Leghorns, Silver Duckwing Leghorns.

H. P. Schwab, Irondequoit, N. Y.—Barred Plymouth Rocks, Favorelles, Frizzles, Rumpless, Russians, Secelians, Sherwoods.

Frank L. Shaw, Palestine, Ill.—White Plymouth Rocks, Partridge Plymouth Rocks, Pea Comb Plymouth Rocks, Dominiques, Dorkings.

W. E. Stanfield, Chicago, Ill.—Black Orpingtons, Buff Orpingtons, White Orpingtons, Jubilee Orpingtons, Anconas, Buckeyes, Red Caps, Capons.

Floor and Pen Notes.

Well and faithfully done again, Mr. Secretary Kimmey.

Mississippi and Canada shook hands in the Rock and Leghorn aisles.

Superintendent Eddy was watchful and by reason of his care and attention the floor work was perfect in its working.

Theo. Hewes was present all week, meeting friends and taking care of the Inland. He is out of the ring forever as judge, he says, which means that one of the best judges ever produced in America has retired.

It was a splendid pigeon show. K. J. Muir has no equal as superintendent. He is very popular with all pigeon exhibitors and knows how to do the right thing at the right time. The following well-known judges placed the awards in this department: F. W. Gorse, Highlandville, Mass.; Geo. J. Asman, Detroit, Mich.; Geo. Ewald, Cincinnati, Ohio; Herman Mashmayer, Milwaukee, Wis.; L. A. Jansen, Milwaukee, Wis., and M. Wagner, Chicago.

President Grant M. Curtis was an all-week visitor. Mr. Curtis as usual was busy boosting the American Poultry Association. No man has contributed more to the uplifting of the association than has this earnest, able and tireless worker. It is a pleasure to here record this fact. Mr. Curtis also gave the Reliable and his incubator interests attention and found time to meet a host of friends.

Dr. O. P. Bennett says it is easy to win—"show the quality kind."

W. S. Russell, Ottumwa, Iowa, was present for two days. Mr. Russell is a candidate for secretary-treasurer of the American Poultry Association. He is one of the most able and popular judges and will undoubtedly prove to be a very popular candidate.

Dr. R. C. Coats came down from Canada with a string of magnificent S. C. White Leghorns and went away with nearly every blue and a whole armful of special prizes. His winning birds are of a most perfect type and have size, style and finish. Note his winnings.

Chas. McClave made a large display of turkeys, ducks and geese. Mr. McClave breeds and sells more water fowls than any other breeder in

America and in the show room is always a winner.

Nate Cornwall is so used to winning with his S. C. Buff Leghorns at Chicago that it does not surprise him to see the blues attached to his coops.

S. T. Campbell was unable to be present, owing to sickness. He sent in a number of his winning R. C. Black Minorcas and Columbian Wyandottes. He is very strong in these two popular varieties.

J. M. Williams & Co. were the largest exhibitors in the show, presenting a very large string of magnificent Orpingtons. They showed exceptional quality in S. C. Buffs, R. C. Buffs, R. C. and S. C. Whites and Blacks. Mr. Williams was present all week. He is a genial gentleman and true fancier. He made many important sales. A reading of the winnings of the firm will interest every lover of the Orpington.

Dr. O. P. Bennett made a splendid winning in Barred Rocks. His first prize cockerel, a bird bred and raised by the doctor, was the talk of the show room, and an offer of \$250 for him was declined. Dr. Bennett's birds were all of one type and that most approved.

Oak Hill Poultry Yards showed some wonderfully good Columbian Wyandottes. Second cock was a fine bird, while the third pullet was of wonderfully good quality.

Simon Bouth cooped a number of his good Buff Wyandottes. He annually produces some of the best Buffs shown.

P. H. Sprague was in the winnings in Rhode Island Reds and Columbian Wyandottes. Mr. Sprague has large flocks of these two popular varieties.

W. R. Wooden is a mighty busy man, but takes time each winter to come to the Chicago Show with some of those invincible Buff Wyandottes. He knows how to breed winners.

B. F. Hislop is always strong in Golden Wyandottes and this year showed some exceptionally fine birds.

Ralph Sturtevant is never outside the winning lines in Buff Wyandottes. His stock here was especially strong and his winnings many.

The best Silver Laced Wyandotte hen and pullet the writer has ever seen was exhibited by A. & E. Tarbox. For well-defined lines and clearness of color these two specimens were marvels. Messrs. Tarbox annually produce a large number of exceptionally good Silvers.

C. L. Duffield was a heavy winner in Partridge Wyandottes, Partridge Cochins, Light Brahmas and Columbian Wyandottes.

Carver & Avey, whose Partridge Wyandottes have been winners at Chicago and all leading shows in the west for years, made a nice winning here. Their first pen was very strong.

Clive H. Owen showed some magnificent Columbian Wyandottes. His winning cockerel and pullet are something

far and away the best Columbians shown in all the west.

John A. Flick, whose Columbian Wyandottes were winners at Cleveland and elsewhere this season, was well represented here. Mr. Flick has a fine flock of this variety, and no one in all America has a better foundation upon which to build this now most popular variety.

Miller Purvis—the only Miller Purvis—was present all week representing the idol of his heart—Poultry.

The meeting of American Poultry Association members from Illinois, Indiana, Iowa, Wisconsin and Michigan was a large and enthusiastic one. Here was organized "The Mid-West Branch of the American Poultry Association." The Mid-West should and will, we believe, be the strongest of the various branches of the association.

O. L. King was present looking over the Barred Rocks.

F. W. Richardson came in for a day; of course he spent the day in Barred Rock alley. He took a good cockerel home with him.

Interesting prices on ton and car lots. Send for illustrated seed catalogue.

The Mangelsdorf Bros. Co., Seedsmen, Atchison, Kansas

The Jewel Incubator's Success Well Earned

Success was well deserved, for the most severe critics say that Jewel Incubators and Brooders in competition with well known machines hatch and rear better chicks than they have ever seen done before. Jewel Incubators not only turn out big hatches, but Jewel Brooders rear more chicks that are hatched than any other machine known.

International Stock Food Co.,

Minneapolis, Minn.

Gentlemen:—Jewel Incubators are the best machines made. I have seen a good many makes, but the ventilating system in the Jewel beats them all.

Very truly, Willis A. Slate.

South Windham, Conn.

99 per cent Hatch by L. H. Moran, Montfort, Wisc. 100 per cent Hatch by F. E. Wheeler, Moscow, Penn.
95 per cent Hatch by W. J. Bailey, Owingsville, Ky.

Does it pay to take chances with inferior machines? The evidence is strong in favor of the Jewel. No other incubator or brooder has met with such universal favor as the Jewel. Our new mammoth Catalog tells of the wonderful success of our Incubator and Brooder. It tells how to raise good poultry. Ready for mailing January 1st. Send us your name now. We have something to tell you that is true about good Incubators and brooders.

DAKIN'S "PREMIER" WHITE WYANDOTTES.

THE GRANDEST OF THEM ALL

They are "THE CLASS" and have won since 1900 at Madison Square Garden, N. Y., Boston, Chicago and St. Louis, more of the "HIGHEST AWARDS" than any other. Do you want a winner? Are you short on show birds? If so, write your wants at once. Only a limited number of selected birds available. Prices reasonable for these "BIRDS OF CLASS." Specimens fitted for the show room for purchasers if desired.

JOHN L. DAKIN

ROXBURY, MASS.

YOUNG'S STRAIN OF S. C. WHITE LEGHORNS

I HAVE NO OTHER BREEDS. My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined; including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; ckls., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; ckls., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 300 fine cockerels at reasonable prices.

D. W. YOUNG - Ridgewood, N. J.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1½ to 1½ lbs. in seven weeks on it. No seauce required to feed my system. Failure impossible. Start right. Circular and testimonials free. Write today and stop that big feed bill.

EDGAR BRIGGS, Box A

NEW ROCHELLE, N. Y.

White and Columbian PURCHASERS ATTENTION!

Owing to the increase in my feed and coal business I have decided not to run my incubators nor sell any eggs for hatching, keeping only a few gilt edge pens of both White and Columbian Wyandottes. Therefore will have some very good bargains to offer in both varieties, except that I have no white cockerels to offer. Prices on others from \$2 to \$5. I have recently bought the entire flock of Columbians of a well known strain, winning at New York Garden show 2d cockerel, 2d pen, 5th hen in the biggest class of Columbians ever gotten together. Also won 3d hen at the Crystal Palace Show, England. Address

D. LINCOLN ORR

ORR'S MILLS, N. Y.

60,000 PEOPLE

are supposed to read this advertisement. Each of you who need an incubator should buy the

COUSINS INCUBATOR

Those who have incubators and cannot afford to discard them for the Cousins, THE BEST, should at least equip them with the Cousins Labor Saving and Life Protecting Egg Turning Tray. Write for particulars. Don't say mine or my neighbors will do. If our fathers had said that the mowing machine would never have had a chance.

THE COUSINS INCUBATOR CO., WARREN, PA., U. S. A.

LIGHT PLYMOUTH ROCKS

The beautiful color markings of the old Light Brahma grafted on the Plymouth Rock. A breed with a most promising future. Eggs from splendid matings \$5.00 per fourteen. No discount on large orders. Circular free.

F. M. CLEMANS

Mechanicsburg, Ohio

Barnett's Silver Laced Wyandottes.

Say, send and get our big newspaper circular giving a complete history of Oak Grove Poultry Farm. It contains half-tones of our prize winning Silvers. Houses, yards and prices on eggs, stock, etc., it's free. Eggs \$3 per 15, \$5 per 30, \$8 per 50. Mammoth Bronze Turkey eggs 25 cents each.

E. B. BARNETT & SON, Box 92, Michigantown, Ind.
MEMBERS OF THE SILVER LACED WYANDOTTE CLUB

LT. BRAHMAS, PARTRIDGE & COLUMBIAN WYANDOTTES

Oak Bluff's great trio won highest honors at Cedar Rapids and Iowa State Shows. Partridge Wyandottes, Cedar Rapids, 1st, 3d cks., 1st, 2d hen, 1st, 4th pullets, 2d pen, Governor's cup. Columbian Wyandottes, 1st, 3d cks., 1st, 2d pullets, 1st hen, 1st pen. No Light Brahmas shown. Iowa State Show, Light Brahmas, 1st, 3d cks., 1st, 2d cks., 1st, 2d, 3d hens, 1st, 2d, 3d pullets, 1st pen, best ten. Partridge Wyandottes, 1st, 3d cks., 1st, 3d, 5th cks., 1st pullet, 3d hen, 1st pen, best ten. National Club Specials best colored male and female, best shaped male. Columbian Wyandottes, 1st, 2d, 3d cks., 1st, 2d hens, 1st, 2d, 3d, 5th pullets, 1st pen, best ten. If you want something fine in stock I can please you. 1907 catalogue of matings out soon. Write me.

"Oak Bluff" Dr. N. E. Mighell, Marshalltown, Ia.

HAUPT'S ORPINGTONS

ROSE AND SINGLE COMBS are winners at Madison Square Garden, N. Y., Pennsylvania State Show, great Allentown Fair, Dover Poultry Show, etc. Stock and eggs. Over 100 acres devoted to the higher element of the Orpingtons. We will also sell stock and eggs from our huge farms of S. C. W. Leghorns. No better stock anywhere.

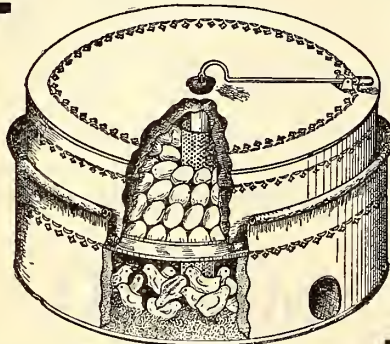

J. S. HAUPT & CO.

Easton, Pennsylvania

Hatch and Brood

AT SAME TIME

Here's a new thing—a complete hatcher and brooder, a machine that performs both of these operations at the same time and does both well. It is made entirely of metal and asbestos felt, so cannot warp, swell, shrink or crack. Will hatch hens', ducks', goose or turkeys' eggs equally well and at the same time.

Metal Mother \$7.50
BROODER - HATCHER

40 CHICKS FROM 43 EGGS

Cambridge, N. Y., Nov. 12, 1906.
Elmira, N. Y.

Gentlemen:—The combined Brooder-Hatcher I purchased of you last spring is certainly all you claim it to be. The first time we operated it we put in 49 eggs. After the sixth day we tested out 7 and replaced them with 9 fresh eggs. The first lot hatched out 40 strong and the 9 eggs put in after the machine had been running a week hatched 7 chickens. The next time we put in 50 eggs, tested out 6 and 1 that was cracked, and hatched 40 chickens from the 43 eggs. Chicks were brooded in the machine at the same time the eggs were incubating, doing double duty with the one lamp. We think the "Cycle" is the best machine on the market. Very truly yours,
H. V. BUMP.

is a long step ahead of all others—the most remarkable invention in the poultry world. With it 2 qts. of oil hatches fifty eggs and broods the chicks. A time-saving, labor-saving, oil-saving machine complete for \$7.50. Light in weight; shipped cheaply by express. Free catalog tells how it works. Regular Cycle Hatchers and Brooders at \$5. Each are great favorites. Write now.

PERUVIAN CAVIES—Eckert Bros., 1 male; 1 female. Xavier Wytikiewicz, 2 female.

HIMALAYAN ENGLISH CAVIES—Eckert Bros., 1 male; 1 female.

WHITE ANGORA CAVIES—Xavier Wytikiewicz, 1 male.

RED ENGLISH CAVIES—Xavier Wytikiewicz, 1 male; 1 female.

GOLDEN AGANTI ENGLISH CAVIES—Xavier Wytikiewicz, 1 male; 1 female.

CREAM ENGLISH CAVIES—Xavier Wytikiewicz, 1 male; 1 female.

S. C. Rhode Island Reds owned by the De Graff Poultry Farm, Amsterdam, N. Y., won the following prizes at Auburn, N. Y., Poultry Show: Cocks, first; hens, second; cockerels, first and second; pullets, first and second, also first on pen of both breeds.

The Ohio Hatchery & Manufacturing Company have many orders booked for spring, and those contemplating ordering chicks will get prompt service by ordering early, as all orders are booked as received.

WHITE WYANDOTTES "White Frost" STRAIN

I did not win ALL of the prizes at ALL of the shows during the past season, but I DID win the following during the month of December, 1906 at three shows: Three 1sts, three 2ds, three 3ds, two 4ths, two 5ths and six specials, including Silver Cup for Best Pen, any variety. Full list of winnings, together with description of pens mated in catalogue now ready, which I am anxious to send to those interested. Eggs from six grand yards at \$3 per thirteen.

CHARLES D. CLEVELAND, Sunnybrook Farm, West Orange, N. J.

Bogardus' S. C. Buff and Black Orpingtons

Always win wherever shown. 1st prizes at Chicago, Indianapolis, Hagerstown, Frankfort and Warsaw, Ky. At the great Poultry Association Show, Cincinnati, Jan. 1906, they won SEVEN out of a possible 10 FIRSTS. I will give you better value for your money than you can get anywhere. Write your wants and enclose stamp for catalog. Eggs \$5 per 15, \$9 per 30.

O. A. BOGARDUS, :: Box 31, Warsaw, Ky.

WHITE PLY. ROCKS

MADISON SQUARE WINNERS. 1 won at Madison Square Garden, Jan., 1907, 1st on hen and 4th on pen. I bred and own the sire of 1st male and 1st female at Madison Square Garden, and the blood of this great male predominates in my whole flock. Have a large number of very choice cockerels for sale; also females. Have mated up 10 choice pens for best results and will sell eggs at \$5 per 15, \$12 per 45. I guarantee satisfaction to every customer.

C. C. FAIRBANKS - Box A, Saybrook, Conn.

GEORGE'S WHITE ROCKS

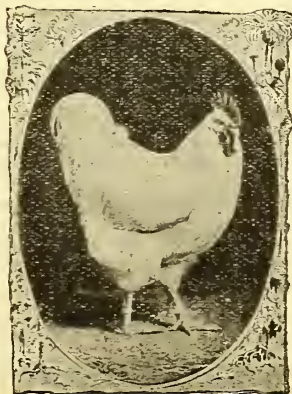

Are still winning wherever shown. Our wonderful record at Chicago, Boston and New York, prove their superior quality. We have a very fine lot of absolutely pure white, fine shaped cockerels for sale at \$5, \$8 and \$10 each. They have fine, low, even combs, nice bay eyes and yellow legs. They are show birds as well as fine breeding cockerels. Eggs from prize matings, one sitting \$5, two sittings \$8, three sittings \$10 and \$20 per hundred.

E. H. & S. H. GEORGE - Groveland, Mass.

True to Name, Birds of Quality, are Lapham's Buff Ply. Rocks.

First pullet at Detroit, score 95. My last winning at Detroit, Mich., Jan. 4 to 9, 1907, 1st pen, 1st and 2d pullet, 1st, 2d, 5th hens, 3d, 4th, 5th cocks, 3d, 4th cockerels, special for best shaped male and female, best colored male and female; also the American Buff Rock cup for best display. I will have ten pens carefully mated up of birds with a world's record, and I promise my customers more for their money than ever before, and guarantee to please or money refunded. Eggs \$2, \$3 and \$5 per 15. Write for my new catalogue, which is free on request. Show birds and breeders always on hand. Remember the name, the Gold Medal Strain. Please mention this paper.

Dearborn Poultry Yards - Dearborn, Mich.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 870 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

THE BOSTON SHOW.

The eleventh annual exhibition of the Boston Poultry Association was held in Mechanics' Building, Boston, Mass., January 15-19, 1907, and again brought out a large number of the most representative breeders in the country. An exceedingly large number of choice specimens of fowls were on exhibition. The social features of the Boston Show are always carried out with great detail and this year was no exception.

Nearly every breed and variety of Standard-bred poultry was represented, and the contests for the prizes were entered into with much spirit and enthusiasm.

The Barred Plymouth Rocks were a large class of exceptional quality, as were also the Whites of this variety. A. C. Hawkins, of Lancaster, Mass., exhibited some choice specimens of White Plymouth Rocks and was awarded first cock and other minor prizes.

The White Wyandottes were an exceptionally strong class. J. S. Martin, of Port Dover, Ont., carried off first prize on cock and second prize on pullet.

In Partridge Wyandottes J. B. Hadaway, of Brockton, Mass., won second cock, first and second hens, first cockerel and first pullet, with as fine a lot of birds as was ever exhibited at a Boston show.

The Columbian Wyandottes was per-

haps the most hotly contested class in the show, and Mr. A. C. Hawkins, of Lancaster, Mass., was there with a large string of very fine birds and won first cock, first and second cockerel, first pullet and first pen.

The Rose and Single Comb Rhode Island Red classes were well filled. Geo. W. Tracey, Kinderhook, N. Y., won first cockerel with a very fine specimen of the single comb variety.

The Orpingtons, while a large class, was not as large as should be at a show of this character, but the quality was good.

Single Comb Brown Leghorns were of extra good quality and the classes well filled. W. H. Wiebke, of Fort Wayne, Ind., was awarded first on cockerel, a very fine specimen of this variety.

Single Comb White Leghorns were a good class, and the prizes went to a number of exhibitors, no one having a walkaway.

The Rose Comb Black Minorcas were well represented by a large number of extra fine specimens. Geo. H. Northrup, of Raceville, N. Y., won first and second cocks, first and second hens, first cockerel and first pen.

Bantams of all varieties were well represented and competition in nearly all classes was very spirited.

If we had more poultry exhibitions of the character of the Boston Show they would do much to advance the in-

terests of thoroughbred poultry and place it at the head of all other industries in the United States.

THE ST. LOUIS SHOW.

The most successful show ever held in St. Louis was pulled off Jan. 8 to 12.

Probably never in the history of any western shows were entries refused, but it was necessary this year to take such action at St. Louis. We had provided room and coops for 800 chickens, but the entries exceeded that number by 250, and late ones were returned to intending exhibitors.

It will be well hereafter to insert a clause in the rules and regulations governing shows that after the space available is taken up by entries, it is the privilege of the association to refuse to accept any more. This is one of the rules of the New York Show, but in the west it has been the practice to solicit exhibits especially, but it is very evident that such solicitation is not necessary where the right kind of inducements are offered to exhibitors. This does not necessarily mean large premiums or big promises, but simply an assurance to the intending exhibitors that they will get a square deal, and a feeling on their part that it will be beneficial to them to make an exhibit at a certain show.

When it is taken into consideration that we only agreed to pay first prize money when there were six or more entries in the class, otherwise first prize ribbon and second prize money only, it is more evident than ever that a great big majority of chicken fanciers are not especially after the premium money, but they do want good attention and such honors as they may be fairly entitled to.

What a Lucky Man Got Last Year

\$100.00 Cash in American Poultry Journal's
Subscription Contest

(CHICAGO, ILL. JUN 27 1906 190 No 7398)

THE First National Bank of Chicago

PAY TO THE ORDER OF

S. M. Yoder \$100 00

One hundred and no/100 DOLLARS

AMERICAN POULTRY JOURNAL PUB. CO.

Geo E. Carter Pres.

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sells on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize. Wishing you and the Journal success, I remain Very truly yours,
S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

you can get premiums worth another \$100 or more, and you have your choice of 100 different premiums.

All Who Send Us Five Subscriptions

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

American Poultry Journal Publishing Co., - Room 510, 325 Dearborn St., Chicago, Ill.

years has been that we furnish all uniform exhibition coops. We do not permit single entries to compete with breeding pens, and we get out a catalogue of the show, showing the name of every exhibitor and his address, his coop number and the name of the breed, so that visitors at all times can get in touch with the owner of such birds as they (the visitors) may be especially interested in. On top of all this I have never seen any show, east or west, receive such flattering and such complete reports of a poultry show as is extended by the local press to the exhibitors who come to St. Louis. When it is taken into consideration that these local notices through the daily papers reach a combined circulation of over 1,000,000 people, it will probably be better understood why it is that there is such a desire on the part of the chicken fanciers to exhibit at St. Louis.

In this connection I trust I may be pardoned for criticising the absence of the poultry press. I believe I can say without serious contradiction that the poultry press would have found it profitable to have been with us. They are welcome. But for some reason best known to themselves they have time and again passed St. Louis by. I have attended a great many shows in my time, but never have I seen so much inquiry for poultry papers or a better field to solicit advertising than was offered at this show. The total attendance for the week was somewhat over 10,000 people, and the opportunity for taking subscriptions and doing other business was probably never excelled outside of New York, Boston and Chicago. If there are any members of the poultry press who will not come to St. Louis, except by special invitation, the writer extends such invitation to all for 1907. HENRY STEINMUCH.

DOWNERS GROVE (ILL.) SHOW.

The third annual poultry show held at Downers Grove was a grand success in every way, and all of the exhibitors (and there were many from other towns and counties) were well pleased with everything. Mr. W. C. Pierce served as judge, and his scoring and judging was absolutely impartial and perfectly satisfactory to all.

Many of the out-of-town exhibitors were so enthusiastic over the treatment they received at the show and at the hands of the secretary and superintendent that they voluntarily proposed to be on hand next year with large strings of birds if the club holds a show next year. The secretary of the club, Mr. Lemon, was on the lookout for complaints and dissatisfaction during the two days of the show and got acquainted with all of the exhibitors, but found only one who was at all dissatisfied and his complaint was quickly adjusted.

There were about 400 birds exhibited, an increase of 25 per cent over the year previous, and the total receipts of the show were \$100 greater.

The silver cup premiums were awarded as follows:

1. J. M. Riel & Son, Downers Grove, for the largest entry, points to govern.
2. W. F. Black, Walnut, Ill., for the best display of Plymouth Rocks.
3. W. S. Ellis, Downers Grove, for the best display of Silver Laced Wyandottes.

4. The Wilmette S. C. White Leghorn Poultry Yards, for the best display of Mediterranean variety.

5. Delbert Austin, Downers Grove, for the best display of Wyandottes other than S. L.

6. Henry T. Shannon, Cary, Ill., for the best display of any other variety (won by R. I. Reds).

7. E. J. W. Dietz, Downers Grove, for the best display of bantams.

8. J. M. Riel, Downers Grove, for the best display of Pigeons.

9. J. Frank Harrel, Aurora, for the best display of English Runts.

10. J. C. Knapp, Chicago, for the best display of Water Fowl (won with Indian Runner Ducks).

Special premiums were won by J. L. Siegrosser and J. C. Knapp, of Chicago; Henry T. Shannon, of Cary Station; H. F. Brophy and Thos. M. Lawton, of Hinsdale; W. E. Cook, of LaGrange; W. F. Black, of Walnut; Mrs. J. N. Hill, of Leland; John Allspangh, of Naperville; F. W. Breed, of Western Springs; John Kaise, of Aurora; Benj. L. Allyn and Chas. Howison, of Sandwich; I. Malpress, of Oak Park; Mrs. Dr. Gourley, Mrs. J. O. Anstin, Mrs. E. G. Lemon, L. M. Cook, E. J. W. Dietz, W. C. Bonnell, Lester Barr, Chas. Mochel, W. S. Ellis, Delbert Austin, Jones & Lemon, F. A. Edgworth and Fred Moschenosh, of Downers Grove.

A number of satisfactory sales were made by the exhibitors during and since the show.

We have received one of the first prize ribbons as a complimentary souvenir, and it is a beauty and of better quality than is generally used at the shows. It consists of a large celluloid button about the size of a silver half dollar, bearing the words 'First Prize' bordered in blue and with blue string to match, attached to the lower edge of which is the blue silk ribbon an inch and a half wide. The fortunate possessor of a full set of these ribbons may justly feel proud of them.

A SUCCESSFUL SHOW AT DETROIT.

What fanciers agree was the best poultry show ever held in Detroit came to a conclusion on the evening of Jan. 9, 1907, when Light Guard Armory closed its doors. It was a success in every way, though the excellence of the exhibits and the amount of work done by the officials would have been better recognized by larger attendances at times. Officers of the Michigan State Poultry Association, by which the affair is conducted, have been elected for the coming year as follows:

President, Dr. R. W. Young, Birmingham; secretary and treasurer, Dan Thomas, Pontiac; vice-presidents, Jacob Banmann, Detroit; Ed Donnelly, Sandwich; John Alban, Adrian; Ed Hungerford, Concord, and Dr. Baskerville, Mt. Pleasant.

One of the odd features of the exhibition is the fact that John O. Lacey, an Afro-American exhibitor who boasted of the darkest complexion in the hall, won the Ivory soap special for the whitest bird shown.

THE ILLINOIS STATE SHOW.

The annual exhibition of the Illinois State Poultry Association was held at Macomb, Jan. 7-12. While the show was not large in point of numbers,

PERFECTION OIL HEATER Gives intense heat without smoke or smell because equipped with smokeless device. All parts are easily (Equipped with Smokeless Device) cleaned. Made in two finishes, nickel and japan. Holds four quarts of oil and burns nine hours. Every heater warranted. If you cannot get heater or information from your dealer, write to nearest agency for descriptive circular.

Well Rounded Porkers

This is a
Prussian Stock Tonic
hog, and he's proud of it.

His owner is proud of it too, for when he takes this hog, together with the rest of the herd, to market, he gets the highest price for him.

Hogs, whose feed has contained a little of Prussian Stock Tonic, are always healthy—the meat is fine flavored, tender and juicy, the kind that is continually sought after to supply the best markets.

There are over 1200 doses in the

Big \$3.50 Pail

enough to add a good many easy dollars to your hog money. Write and tell us what stock you own, and we will send you our Stock Raisers' Manual, a book that tells many valuable things about raising stock.

COLUMBIAN WYANDOTTES

America's greatest production; the handsomest Wyandotte ever produced. Eggs from six grand pens made up from my Danville, Cincinnati and Indianapolis winners, \$10.00 per setting. A few choice birds for sale at \$25 per trio.

Oak Hill Poultry Yards, 2055 Hillsdale Ave., Indianapolis, Ind.

White Plymouth Rocks.

CHICAGO WINNERS In the largest and strongest class of White Rocks in years at the big Chicago Show I won 4th cockerel and 4th pullet. Full brothers and sisters to these winners at bottom prices, quality considered. Satisfaction guaranteed or your money refunded. Eggs from pens containing winners at the Wisconsin State Show and Chicago Show at \$3 per 15, \$5 per 30. Good hatch guaranteed.

CARL H. KRIPPENE :: Oshkosh, Wisconsin

Champions of The West!

Bennett's Barred Plymouth Rocks

Won at Chicago, January 23-27, 1907, 1st, 3d cock, 1st, 5th hen, 1st, 4th cockerel, 2d, 4th pullet, 2d 3d pen, championship male, championship female, best colored male and female, best display, the American Plymouth Rock Club Cup, three other cups and fourteen specials.

O. P. BENNETT & CO.
Box 238 - Washington, Tazewell Co., Ill.

about 1,200 birds being on exhibition, the quality was there, and many birds fit to win in hot company were left outside the money. The decisions of the judges were very satisfactory to exhibitors and no complaints were heard on this score. All varieties of Plymouth Rocks were well represented, as were the Wyandottes, the Buffs being the largest class in the show. The state silver cup, offered by the American Buff Wyandotte Club, brought out the breeders of this variety. The cup was won by F. L. Waterman & Son, Barrington, Ill., who showed a choice string of birds.

The attendance at the show was not what it should have been, as the railroad facilities are such that Macomb is not situated to draw outside patronage on such occasions.

The following officers were elected for the coming year: President, Dr. Gelder, Palmyra; vice-president, Ira Sheets, Macomb; secretary, A. L. Moore, Normal; treasurer, S. S. Noble, Bloomington; superintendent, Julius Klein, Macon.

The State Show should have a permanent location, and if the association would then coop the show it would add greatly to the attractiveness of the exhibition.

"A BIG SUCCESS."

The fifth annual show held at Throntown, Ind., by the Central Indiana Fanciers' Association was pulled off Dec. 17-22, 1906, and was a success in every particular.

The entries were the largest ever known in the history of the association. Large crowds and many sales were also special features. The White Rocks were first in numbers, then came White Wyandottes and Barred Rocks close behind. Buff Rocks, Buff, White and Black Orpingtons, S. C. and R. C. R. I. Reds, Golden and Buff Wyandottes, Light Brahmas and Black Langshans were out in full force.

In the Mediterranean class the S. C. Buff Leghorns led in point of numbers and quality, both in color and shape, and were decidedly good. R. C. Browns were well represented. Only a few S. C. Browns were on exhibition. A good class of S. C. White with quality up in the air were exhibited. Mr. Harman Bradshaw, of Lebanon, Ind., won with a hen. Sweepstakes for highest scoring bird in the show was won by W. C. Pierce with a score of 96¾ points.

Officers for the show next year were elected, re-electing Peter S. Hunt, the faithful and efficient secretary. The next show will be held Dec. 16-21, 1907.

THE AUBURN SHOW.

The Auburn (N. Y.) Show, held the week of the meeting of the American Poultry Association, was patronized by many of the leading fanciers of the country.

The management of the show placed every visiting fancier under obligation. Never have those in attendance at a meeting of the association been better entertained. Messrs. Scott, Adams, Gardner and associates did all in their power to care for the strangers.

Thursday evening the members of the association were banqueted at the Osborn house by the Auburn Fanciers' Association. F. E. Dawley acted as

toastmaster. Speeches were made by Mayor Aiken, Grant M. Curtis, J. Y. Bicknell, T. F. McGrew, D. Lincoln, Orr, Philo Adams, Prof. Graham, Miller Purvis, A. F. Hunter, R. V. Hicks, Geo. Pelton, F. L. Kimmey, Henry Trafford and others.

The forestry institute held during the week was well attended and very interesting and instructive. The following program was carried out:

Address of welcome, The mayor of Auburn.

Response to address of welcome, Grant M. Curtis.

"Practical Poultry Management," G. M. Gowell.

"Poultry at the Farmers' Institute," T. E. Orr.

"What New York State Is Doing for Poultry Culture," T. F. McGrew.

"Results of Recent Investigations in Poultry Husbandry in the United States," C. K. Graham.

"Education and Experimentation in Poultry Husbandry in the United States," illustrated with lantern slides, James E. Rice.

"The Ups and Downs of the Poultry Show," Fred L. Kimmey.

"The Judge and the Poultry Show," Theodore Hewes.

BELVIDERE, ILL.

The eighteenth annual exhibition of the Northern Illinois Poultry Association, held at Adelphi Hall, Belvidere, Ill., Jan. 14-19, 1907, was one of the most successful ever held by the association. They had in previous years more varieties, but when it comes to quality of stock, general good feeling and an absolute lack of kicking on the awards it was a banner year for them. The awards were all up by Thursday and this was the good work of the recording secretary, Mrs. J. C. Plane, Secretary B. R. Lucas and Superintendent S. U. Teeple, and with its large entries of birds was the best show they ever held.

Splendid preliminary work was done in getting out one of the most attractive catalogues ever published by any poultry show, showing that much work was spent upon it. It is well patronized by the advertising of local merchants, which demonstrates that the Poultry Association has solid business men back of it. The local fanciers also patronized its advertising columns in splendid manner.

It is just such exhibitions as this with its entire harmony that benefit the poultry business and make each succeeding exhibition more successful and more educational in its results.

SALEM, OHIO.

The recent poultry show held by the Salem Poultry and Pet Live Stock Association was a decided success from a financial standpoint as well as from the poultryman's viewpoint. The association, which held an enthusiastic meeting at the home of Thomas Cadwallader, on Ellsworth avenue, closed up its business affairs for 1906, including matters relative to a December poultry show, and when all bills are paid has a balance in the treasury of nearly \$100. This money, it was decided at the meeting, will be applied exclusively toward the second annual poultry show, to be held next Decem-

ber, which will be improved and enlarged and made a greater success than the one just held.

MASON CITY, IOWA.

The Upper Iowa Poultry Association at its annual meeting elected the following officers for the ensuing year: President, W. H. Colloton; vice-president, Fred Korsmeier; secretary, John D. Reeler; treasurer, Wm. Long; directors, Ade Randall, M. V. Bickel, Chas. E. Ramsay, J. R. Bliss and Star Parker; superintendent, S. V. Johns; judge, Chas. McClave, New London, Ohio.

Dates for coming show: December 16 to 20, 1907, Mason City, Iowa.

TITUSVILLE, PA.

The Titusville (Pa.) Poultry and Pet Stock Association, recently organized, will hold its first annual show Feb. 26, 27 and 28 and March 1, 1907, at Titusville, Pa. T. L. Andrews, secretary.

ANNUAL MEETING OF AMERICAN WHITE PLYMOUTH ROCK CLUB.

The annual meeting of the White Plymouth Rock Club was held at Madison Square Garden at 3 o'clock Wednesday, Jan. 2, 1907. The meeting was called to order by President Maurice T. Delano. The roll call showed twenty members present, representing the states of Illinois, Michigan, Wisconsin, New York, Pennsylvania, New Jersey, Massachusetts and Connecticut.

Some time was devoted to the discussion of the illustrations of White Plymouth Rocks in the "American Standard of Perfection." It was the very general opinion that these cuts were too much on the Wyandotte order. More length of body and back, particularly in the males, was strongly advocated. The Standard weights, however, met with quite general approval. It was voted that a committee of five be appointed to make revision of the male and female "Standard" White Rocks, and that members furnish this committee with illustrations of birds, pointing out in them the sections which appeal to them as ideal; these to be used as data to be submitted to an artist for the purpose of drawing ideal birds. It was also moved that the committee be instructed to submit artist's proof to club members by July 1. The Chair appointed as this committee Messrs. J. L. Jefferson, Des Plaines, Ill.; Samuel J. M. Quilliande, East Hartford, Conn.; Fred Huyler, Peapack, N. J.; H. P. Rankin, Hartington, Neb., and Geo. W. Hillson, Amenia, N. Y.

Interesting personal observations of early maturity and excellent laying records of White Plymouth Rocks were reported to the meeting by members present.

It was voted that a committee of three be appointed to solicit cash specials for the eastern district meeting next year. The Chair appointed Messrs. Chas. H. Ward, Bethel, Conn.; H. W. Strong, East Hampton, Conn., and T. Farrer Rackham, Orange, N. J.

A financial statement and general resume of club affairs, past and present, was given by the secretary-treasurer, Seth W. Gregory.

A vote was carried recommending that the club offer \$100 toward cash

S. C. B. LEGHORNS.

Bred from winners. Eggs from cockerel or pullet matings \$2 and \$3 per 13. Orders booked now. Laurel Leghorn Yards, E. J. Stuckmeyer, 1401 Prospect St., Indianapolis, Indiana.

S. A. HUMMEL - Box 52, Freeport, Ill.

specials at its annual meeting next year, and that said meeting be held west of the Mississippi river.

A rising vote of thanks was tendered the secretary-treasurer for the able manner in which he has conducted club matters since he came into office.

It was with no little sense of pride that the members at the meeting pointed out the fact that White Plymouth Rocks were the largest class at Madison Square Garden. It was felt that the liberal cash specials offered to club members were responsible for this landslide. It was the sense of the members that this exhibit could be duplicated, and better, next year.

The meeting was a most harmonious one and augurs well for the continued prosperity of the club.

RHODE ISLAND RED CLUB OF AMERICA.

The Rhode Island Red Club of America met during the week of the New York Show, President Phillip Caswell presiding.

The report of Secretary Prickett was an interesting one and shows the wonderful growth of the club membership. Since the Cincinnati meeting a year ago 294 members have been added. At the New York meeting 168 names were added.

It was voted to print in the next issue of Red Hen Tales ideal cuts of male and female, both varieties. There was some talk of printing them in color. C. M. Bryant and Thos. F. Rigg advised against this on the ground that it is impossible to put on paper the ideal color of a Rhode Island Red.

The treasurer reported a balance of \$415.76 on hand.

On motion of C. M. Bryant the club accepted the offer of the Rhode Island Agricultural College, and Reds will compete in the egg contest now being arranged for by this department of the college.

Officers were elected as follows: President, Philip Caswell, Newport, R. I.; first vice-president, Hon. C. M. Bryant, Wollaston, Mass.; second vice-president, O. E. Miles, Columbus, Ohio; third vice-president, C. F. Ward, Winter Park, Fla.; secretary-treasurer, E. L. Prickett, Hazardville, Conn.; executive committee, Philip Caswell, Newport, R. I.; Hon. C. M. Bryant, Wollaston, Mass.; E. L. Prickett, Hazardville, Conn.; Dr. N. B. Aldrich, Fall River, Mass.; Lester Tompkins, Concord, Mass.; Vernon L. Stafford, Fall River, Mass., and S. J. Tetley, Farmington, Mo.

Secretary Prickett stated that he could not longer serve the club as secretary, owing to the demands of his business affairs.

On motion of C. M. Bryant the executive committee was empowered to supply the vacancy.

NATIONAL S. C. MINORCA CLUB.

The National S. C. Minorca Club was permanently organized with thirty-three chartered members at Madison Square Garden, Jan. 3, 1907, elected officers and adopted their constitution and bylaws.

The foundation for this club was laid less than a month ago, and by diligent work they presented the members with a line of specials at the Madison Square

Show such as was never before presented by any Minorca club.

The objects of the club are:

"Harmony among Minorca breeders, Equal rights among its members and the general promotion of the Single Comb, Black and White Minorcas."

The club will issue its first catalogue about April 1, 1907, and the prospects are that this new club will be one of the most prominent specialty clubs in the near future.

The officers elected are: President, John A. Gamewell, No. 79 Fifth avenue, New York City; vice-president, Arthur Trethaway, No. 45 Parrish street, Wilkesbarre, Pa.; secretary and treasurer, H. W. Billard, Brooklyn Hills, New York; board of directors, Robert H. Armstrong, Richmond Hill, N. Y.; Harry T. Deane, West Orange, N. J.; George A. Middleton, No. 338 Broadway, New York, and Edward Shinabrook, Chambersburg, Pa.; vice-presidents, Phillip S. Klee, Blauvelt, N. Y.; C. W. Petty, Hackensack, N. J., and C. W. Brockway, No. 1354 Monecy avenue, Scranton, Pa.; press committee, Rowland Story, Brooklyn, N. Y.; Harry T. Deane, West Orange, N. J., and R. H. Armstrong, Richmond Hill, L. I.; committee on emblem, Edward F. Freese, Glendale, N. Y.; William Weidemann, Brooklyn, N. Y., and J. H. Santee, Campville, Tioga county, N. Y.

The club issued special ribbons for club members at the Madison Square Show which were very elaborate and were admired by all who saw them. They propose to issue the same to all of the leading shows; and invite all breeders of Single Comb Minorcas to join the club. Send the secretary \$2, which pays membership fees and dues for one year. Any information in reference to club matters will receive prompt attention. H. W. BILLARD, Secretary and Treasurer National S. C. Minorca Club, Brooklyn Hills, Long Island, N. Y.

AMERICAN FAVEROLLE CLUB.

A meeting of Faverolle breeders was held during the show at Madison Square Garden, which resulted in the formation of the Faverolle Club of America. Twenty-six members were enrolled, and there are many more who will probably join at once. The following gentlemen were elected as officers for the ensuing year: President, Hon. H. W. Bardwell, Tuckahoe, Pa.; vice-presidents, Dr. A. H. Phelps, Glens Falls, N. Y., and C. S. Hanna, West Hebron, N. Y.; executive committee, Messrs. Eben Ritchie, Shelton, Conn.; R. B. Fitz Randolph, Trenton, N. J., and C. E. Goodman, Mamaroneck, N. Y.; secretary and treasurer, Mr. M. J. Whitty, Wiseacres Poultry Farm, Croton-on-Hudson, N. Y. It was decided to adopt the English Standard, modified to suit the A. P. A. score and system, with the addition of disqualifications for clean legs, four instead of five toes, and absence of muffle. The club will hold a club show at either Boston or New York next year, and some of the members have subscribed handsomely for a challenge trophy for the best pen of Salmons, to be won three times in succession or four times in all. Salmons and Erminies are the two varieties as yet recognized by the club. This great breed of real utility fowls have come to stay, and now that

there is a specialty club to look after their interests their coming popularity will be greatly accelerated. The secretary will be pleased to furnish any further information to those interested.

AMERICAN POLISH CLUB MEETING.

The annual meeting of the American Polish Club will be held at old City Hall, Pittsburg, Pa., on Wednesday, Feb. 20, 1907, at 2 p. m., during the week of the great Pittsburg Show. All members are urged to attend, as election of officers takes place at this time. A fine list of club specials will be offered, a copy of which can be obtained by dropping the secretary a card. Send for a list today and make up your mind to send an exhibit. We want to make this the banner show of Polish ever seen in the United States, and to do this we must have the hearty support of fellow members and breeders. If interested in Polish do not fail to send for our club catalogue. A two-cent stamp will bring you a copy by return mail. Address M. V. Caldwell, secretary and treasurer, Route 2, Leontonia, Ohio.

AMERICAN LEGHORN CLUB.

The thirteenth annual meeting of the American Leghorn Club was held on Thursday, Jan. 3, at 4 p. m., at Madison Square Garden.

The following officers were elected: President, W. F. Brace, Victor, N. Y.; vice-presidents, E. G. Wyckoff, Ithaca, N. Y.; Wm. E. Bright, Waltham, Mass.;

Frank McGrann, Lancaster, Pa., and Miss Sophia C. Pitchlynn, Chicago; secretary and treasurer, W. W. Babcock, Bath, N. Y. E. D. Pierson, Addison, N. Y., was elected delegate at the annual meeting of the American Poultry Association.

It was moved and carried that the next annual meeting be held at Madison Square Garden, New York, in January, 1908.

W. W. BABCOCK,
Secretary and Treasurer.

WHITE PLYMOUTH ROCK CLUB.

On Jan. 10 the admirers of the White Plymouth Rock in San Antonio met at the residence of Mr. E. H. Wilkinson, 413 East Crockett street, San Antonio, Tex., and organized what is now known as the "Alamo White Plymouth Rock Club," the following gentlemen being elected as officers: Mr. W. P. Clark, president; Mr. M. Coppard, vice-president, and Mr. R. S. Kendall, secretary and treasurer. Judging from the amount of enthusiasm manifested at this meeting, it is safe to say that the White Rocks will forge ahead in this part of the state.

A very enthusiastic meeting of the National Rose Comb Rhode Island Red Club was held at the Boston Show at 1:30 o'clock Wednesday, Jan. 16, 1907. The president, Mr. Tuttle, was in the chair, and bylaws of the constitution were adopted and the organization perfected.

This club was started at the Cincinnati Show in 1906. Robt. C. Tuttle, Hartford, Conn., was elected president;

AMERICA'S CHAMPIONS. HAWKINS' COLUMBIAN WYANDOTTES

Win more first and special prizes than ALL COMPETITORS at the world's greatest shows.

NEW YORK AND BOSTON, JAN., 1907,

In strong competition with all the prominent breeders of this variety. Winning 1st COCKEREL, 1st BREEDING PEN and six specials at New York. At Boston, 1st cock, 1st and 2d cockerel, 1st pullet, 1st breeding pen, National Columbian Wyandotte Club Silver Cup for best display and 18 other specials.

CHOICE BREEDING BIRDS FOR SALE. ECCS FROM PRIZE MATINGS ONE SETTING \$5; THREE SETTINGS \$10.

BOSTON SHOW, 1907 LING'S WHITE WYANDOTTES

The largest White Wyandotte show of the season,

Special for Best Cockerel and Four Pullets (all birds in single classes competing)

Special for Best Display.

(all White Wyandottes competing)

Besides regular and other specials. Free catalogue and mating list.

EDWARD E. LING, R. Box 13, So. Portland, Me.

John E. Davis, Marblehead, Mass., secretary. The executive committee consists of the president, secretary and W. F. Hoyt, Peacock, N. H.; Ed Walking, West Medford, Mass.; J. Cleveland Capen, Bloomfield, Conn.; Lester Tompkins, Concord, Mass., and Walter T. Almy, New Bedford, Mass.

The object of the club is to work in harmony with the Rhode Island Red Club of America, but to particularly push the interests of the Rose Comb variety.

This report is respectfully submitted by C. M. Bryant, secretary, to Robt. C. Tuttle, president.

A CORRECTION.

In the last issue of American Poultry Journal we placed Mr. Bachmann, of Kansas City, Mo., in a very embarrassing position. We stated "that Mr. Bachmann had a few birds scored by Judge Southern which he would sell." Mr. Bachmann plainly states in his advertisement that he forwards score card with every Silver Wyandotte he sells, and the judge's name is Southard. We are also pleased to state that Mr. Bachmann has more than only a "few birds."

BOYS' NATIONAL POULTRY CLUB.

In the last issue of this valuable journal the kind editor did me the favor of publishing an article in regard to our club, the B. N. P. C. That one article brought me more answers than any other I ever had published. Let-

ters literally "poured in," and our club has been greatly benefited by the kindness of the editor of the American Poultry Journal in publishing my article.

I want to include in this article the notice of our election. Votes may be sent in after February 1, but not later than March 1. The individual vote of each member of our club is earnestly solicited, as your vote may decide the contest. It costs nothing to vote, so don't try to make that your excuse for not doing so. The following members have been nominated:

For President—Mr. H. C. Bunch, Petros, Tenn.; Mr. Claude Smith, Gilmore avenue, Nashville, Tenn.

For Vice-President—Mr. Frank A. Potts, Box 735, Charlotte, N. C.

For Secretary and Treasurer—Robert Fields, 33 Caruthers avenue, Nashville, Tenn.; Walter Ross, Gilmore avenue, Nashville, Tenn.

The elected officers will go into office March 10.

The executive committee shall consist of the president, vice-president, secretary and treasurer and two other members appointed by the president. These regulations are for the time being only, and are subject to amendment or abolition by the executive committee. The said committee shall draw up a set of by-laws some time in March or April.

Now let me say a few words to the boys who read this and have not joined: Our club is free to all boys under 21 years of age. All you have to do to become a member is simply this: Write

me (enclosing stamp), give me your age and the variety you breed, and I shall take pleasure in enrolling you as a member of the B. N. P. C. You may send in your vote with your application, but this is not required of you to become a member. If you know of any other boy poultry breeders whom you think would like to join, tell them of our club and try to get them to join. Address all communications to Robert Fields, 33 Caruthers avenue, Nashville, Tenn.

YOUNG'S S. C. WHITE LEGHORNS.

D. W. Young, Ridgewood, N. J., the noted Single Comb White Leghorn breeder, again made a big winning with his birds at the late Madison Square Garden show, winning first, second and fifth on cocks, first and third on hens, third on cockerels and first and third on pullets and second on exhibition pen, thus winning three firsts out of a possible five. Mr. Young's strain of Single Comb White Leghorns is the oldest in America, having been imported and founded by his father in 1855. By careful and persistent breeding this strain has been bred up to its present high state of perfection, and their record in the show room stands unequalled. Mr. Young is a thorough fancier and breeds fowls for the love of it and not for the money there is in it. His main object is to produce a Leghorn that comes up to Standard requirements and at the same time will fill all requirements in egg production. That he has accomplished this goes without saying. We take pleasure in recommending Mr. Young to our readers as a man who will give them a "square deal."

DUSTON AT MADISON SQUARE GARDEN.

In one of the largest and best classes of White Wyandottes ever exhibited at Madison Square Garden, Arthur G. Duston, South Framingham, Mass., the famous White Wyandotte breeder, made the following winnings: Second and fourth cock, first hen, second cockerel and third exhibition pen. This record is one that Mr. Duston may well be proud of, especially when we take into consideration the fact that Mr. Duston has not done any exhibiting of late years, being satisfied to let his customers do the exhibiting and winning. But this winning shows that Mr. Duston has not forgotten how.

Mr. Duston informed us that he was never better prepared to supply the demand for White Wyandottes than he is this season, and that he has mated up a large number of extra good pens from which he will sell eggs. Mr. Duston's strain of White Wyandottes is too well known to our readers to need further comment here. Send for his circular, and mention American Poultry Journal.

A PLEA FOR A NAME.

Editor American Poultry Journal.

With all the good work done by the makers of the Standard, they have failed to touch upon one point, a name for our "hens."

Webster defines "hen" as "the female of any kind of fowl." And "chicken" as "the young of any kind

"Ivrolett" White Ply. Rocks

Geo. W. Hillson's Down-to-Date Winners

"Ivrolett" champion gold special cockerel at Madison Square Garden, N. Y., 1906, for most typical and best shaped White Rock male in the show, 104 competing. "Ivrolett," 1st and special prize pullet World's Fair, St. Louis, 1904, 78 competing. Winners of the Hon. Joseph B. Thomas, Valley Farm Challenge Silver Trophy, Johnstown, N. Y., Dec. 11-15, '06, for best two cocks, two hens, two cks. and two pullets. The above record stands alone and unequalled by any White Rock breeder in America. 500 grand exhibition and breeding cockerels, trios and pens mated for best production. Elegant 12-page catalogue free.

GEO. W. HILLSON

Box 404, Amenia, N. Y.

Why 1907 Owen Farms Chicks Will Win

Blood will tell. **Unbeaten winners**, properly mated for best results, will produce unbeatable chicks. At Madison Square Garden, N. Y., in 1906-67, and at Boston in 1906, our birds won 48 firsts and cups out of a possible 67. This record has never been approached on our varieties in such tremendous competition.

These **unbeaten winners** are properly mated, and they will breed the finest chicks we ever raised. New mating list for 1907 now ready. Eggs from our best are \$5, \$10 and \$20 per 13. Eggs from well mated pens are \$3 per 13. Eggs from thoroughbred utility pens are \$6 and \$10 per 100.

Good to fine breeding birds, carefully mated for best results, and also bred from our **unbeaten winners** are yours at low prices for blood lines and quality. Let us quote you and judge for yourself. Our breeds are:

**Buff and Black Orpingtons,
Barred, Buff and White P. Rocks,
and White Wyandottes.**

Illustrated catalogue tells the story. We want you to read it and it will be mailed free if you will ask

1st New York, 1906; 1st Boston, 1906

OWEN FARMS, Box A, Vineyard, Haven, Massachusetts
WM. BARRY OWEN, Proprietor MAURICE F. DELANO, Manager

of fowl." And "fowl" as "a vertebrate animal having two legs and two wings, and covered with down or feathers."

This may mean ducks, geese, turkeys, birds of the air, etc. Poultry includes all the above. What I would like is a name to distinguish a mixed flock of what are commonly called "hens" or "chickens," i. e., old, young, male and female, collectively, from a flock of ducks, geese and turkeys.

I heard a man ask a woman if she set turkey eggs under the turkey hen, and she said: "No, I put them under a chicken hen." Think of it! No better name than "chicken" hen for our improved beauties.

Are they still only "barnyard fowls?" Bell Kellogg.

West Richfield, Ohio.

MOTTLED ANCONAS.

Editor American Poultry Journal.

Dear Sir:—I have been reading an article in the January issue of the American Poultry Journal on Anconas, by A. V. Meersch, which conveys the impression that these celebrated fowls are very wild and should have runs wired over on top to keep them from flying out. Now this may be his experience with Anconas, but it has not been mine. I have made egg production with Mottled Anconas a specialty for seven years, and I find them very tame and friendly when treated kindly. I keep them in large yards enclosed with wire fences only five feet high. Strangers go through my yards with me every few days and we can walk among them without their trying to fly out. In fact, I have many pets in every yard that I can pick up at any time. Anconas can be kept in common parks without any more trouble than any other breed of fowls.

He says some strains lay decidedly small eggs, but often 200 in a year. This is no doubt the case with some strains. It is a well-known fact that the laying qualities of any breed of fowl can be much improved by always breeding from the best layers. I have a laying strain of Mottled Anconas bred from my best layers for the past seven years, that many of them in my breeding yards will lay 270 eggs in a year, and larger eggs than any breed I ever saw except the Minorcas, often six eggs weighing a pound.

I write this that the readers of the American Poultry Journal may not get a wrong impression of the Mottled Anconas, who, as egg-producers, winter and summer, have no equal among all the breeds known.

J. B. Barnard.

Garrettsville, Ohio.

"AN UNNECESSARY BURDEN."

The column of quotations, etc., under the above head, on page 46 of the January number, calls for a few remarks. I will be forty years old next month, and for twenty-five years of that time have been taking poultry papers and reading them. I do not remember ever reading one "clear through" and not finding at least one dyspeptic brother on the trail of those guilty of "foisting" new breeds on the great American public. Strange, these same knockers or their ancestors saw disaster in giving the White Rock the Plymouth Rock name. Then, also, the White and Golden Wyandotte were "foisted" on the public amid threats of gore. "They should

be given another name." "an outrage on the original Wyandotte," etc., etc., ad multos annos, ad nauseum (or Portuguese to that effect).

Well, well, well; now there is more trouble brewing. Some busybody started a new breed of Wyandottes with Light Brahma color markings and "foisted" it on the public. Strange to say, the public liked the dose. Of course this was a sin, but, then, the Columbian Wyandottes are now in the Standard, and such a beautiful breed withal that the Mauds have about quit kicking and the Columbian classes at the shows are outrageously large and interesting. But, then, it ought to stop there, and they do say that some sinful chicken men are using single-combed sports to manufacture a breed of Rocks of the same color. This is awful—"the last straw," etc., etc. Well, if they could get the size and type without introducing Light Brahma or Rock blood, why not? But I believe it is better accomplished by such introduction. Also, I think the name "Light Plymouth Rock" better suggests the desired type than "Columbian Plymouth Rock." It is shorter and more euphonic. After all, who now living has any copyright on the name Plymouth Rock? The name at once suggests the American ideal type of an all-purpose fowl. If it can be produced in different colors, giving play to individual tastes, who is injured? Certainly not the Barred Rock breeders, for, since the introduction of White and Buff Rocks, Barred Rock men are more numerous than ever. The fact is, these new breeds must stand or fall on their merits, and any that cannot measure up to the desired type will fail. If the new breed succeeds the name Plymouth Rock will be enhanced. The history of the breeds shows that the origin of the blood from which each breed was formed cuts little figure so that the desired type has been attained. That is the problem before Light Plymouth Rock men—to attain the ideal Rock

type. If they do that the quibbles of bilious brethren will cut no ice and the Standard will naturally want such a breed on its pages. F. M. Clemans.

Mechanicsburg, Ohio.

Dalley & Douglas, Flat Rock, Mich., start a yearly display ad with us this month, and while they are comparatively new advertisers, they are not new in the breeding of thoroughbred fowls. They have been breeding White Plymouth Rocks for some time, but did not care to advertise until they knew just how good their stock was and how true they would breed. At the late Detroit show, in one of the largest classes of White Plymouth Rocks ever gotten together at Detroit, they won first and third cock, first hen, second and third cockerel, fourth hen, first and fourth pullet, first and second pens, also special for highest scoring cock bird. The writer had the pleasure of handling these birds and must say that their first prize hen was one of the best White Plymouth Rocks it has ever been his pleasure to handle. The first prize pullet was grand in shape and the color was snow white. The first prize cock was a grand specimen of this variety. This bird will head one of their breeding pens this season, and as he was used by them last season and produced some grand stock, they feel sure that eggs from this pen will more than please their customers. They have several hundred choice breeding birds to spare, and will guarantee satisfaction to every customer, and they are now prepared to fill all orders promptly. If you will give this firm a trial order we feel sure that you will not be disappointed in the treatment you will receive, for they are in the business to stay, and believe that a satisfied customer is the very best kind of advertising. Look up their ad elsewhere in this issue and write them today, and mention American Poultry Journal.

Palmer's S. C. Buff and Black Orpingtons

Cannot be surpassed for color and shape, and are far enough south to be hatched early, therefore attain great size and prolificacy as breeders and layers. And furthermore they won the past season (1906) at Rockville, Md., and Paterson, N. J., 18 out of a possible 23 prizes, including 8 1sts, 3 2ds and 2 specials at Paterson for best shaped birds in show in these classes. If you want the best we can supply you. Get our free circular and price list before placing your order.

Questions and Answers

- Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: I will be very grateful if you will answer the following questions in the next issue of the Journal.

1. One afternoon last week one of my two males died. The day before he was apparently all right, but on the morning of this day I had to chase him from the roost and all day he seemed droopy, hardly moving from one spot until he died in the afternoon. His craw seemed to be swollen and feverish. His comb was natural color. Had he not been droopy you would not have known he was sick by looking at him. In a couple of days my other cockerel died in the same manner, with the same symptoms, only corn passed through him undigested. It seems strange to me that in a flock of thirty, the males only should be afflicted. What is the trouble and what is the remedy?

2. Are the following conditions and feeds favorable to egg production? I have a flock of thirty Barred Plymouth

Rocks. They are housed in a warm coop which is composed of a good sized roost room and a large scratching shed, the floor of which is covered with straw about six inches. They have access to a large run and always have before them fresh water, grit, oyster shells and charcoal. In the morning I feed two pounds of fresh green cut bone. After that has been eaten I scatter some wheat screenings in the straw to keep them busy. At night feed three quarts of corn, wheat and oats, equal parts. During the day I feed a few table scraps. I don't get any eggs, but the hens have bright red combs and sing continuously.

3. When there is snow on the ground I keep the hens in. Is this proper?

4. Is it advisable to put coppers in the drinking water? S. D. K.

Dayton, O.

Answer:—1st. We are unable to tell you the cause of your two roosters dying, but it was no doubt due to your

method of feeding. They were probably greedy and got too much feed of some kind. 2d. The conditions are all right for egg production, but your method of feeding is not good. You feed too much green bone. This should not be fed oftener than three times a week, about two ounces to each fowl.

Wheat screenings is very poor feed for laying hens. Always feed the best wheat obtainable if you desire plenty of eggs, well fertilized. 3d. Yes. 4th. Yes, two or three times a month.

Editor American Poultry Journal.

Dear Sir: We just killed an Orpington pullet that acted as if egg-bound, and upon drawing her took out a mass about as large as a man's fist, made up of sacks containing a watery fluid. Please tell me what this was and what caused it and whether it would render the hen unfit to eat. H. G.

Mniskogee, Ind. Ter.

Answer:—This was evidently a tumor, but we are unable to say what caused it. A fowl in this condition is unfit for consumption.

Editor American Poultry Journal.

Dear Sir: 1. I would like to have you tell me how many eggs would you figure from 28 Brown Leghorns in the winter. We get from 15 to 20 eggs a

Trap Nest Your Flock in 1907!

and be progressive. Get the **SUPERIOR**, best and cheapest. Write today for free catalog and investigate the Trap Nest Idea.

J. A. Bickerdike:—

After using your Trap Nests six months I am glad to say they are very satisfactory. I have tried three different makes and have thrown them out entirely. Your Nest is more simple, easier to operate and never fails to catch the hen. Would state I consider Trap Nests as essential to successful breeding as any one thing, and I can not but see that the Superior has a brilliant prospect, and assure anyone who is looking for a nest "all good points" yours is the one they want. Yours respt.,

Sodus, N. Y.,

American Poultry Journal Publishing Co., - Room 510, 325 Dearborn St., Chicago, Ill.

day. Do you think that is good from 28 hens?

2. What is the best way to break up hens from setting?

3. What is the best time to raise incubator chicks—March, April or May?

4. I have a 100-egg incubator and I would like to have you tell me what would be the best way to run it this spring. Last spring I got it and run it and when I tested my eggs they all looked fertile, the fifteenth day they looked the same and the twentieth the same, and the twenty-first day I got three chicks out of the 100. F. L. Rockville, Conn.

Answer:—15 to 20 eggs a day from 28 hens at this season of the year is an extra good record. 2d. By confining them for a few days in a small coop where they have no nesting material. 3d. All three months are good. 4th. You should run your incubator according to the directions furnished by the manufacturer. Fertile eggs on the fifteenth day of incubation should be at least three-quarters dark.

Editor American Poultry Journal.

Dear Sir: As I am a reader of your most valuable paper, I would be pleased if you would answer the following questions in the next issue of the Journal: 1st. I had a young pullet and she got so she could not stand on her feet, but she would eat and drink a little and if she would move she would roll on her side. After lingering for a few days she died and when I cut her open her gizzard was found between her legs. What was the cause of this and is there a remedy for it? 2. I also have had chickens that would have their tails grow lopsided. Is this from having to go through a small opening into the coop, or what is the cause of it? Wheeling, W. Va. F. G. C.

Answer:—1st. This is usually caused by the fowl becoming too fat, which causes a displacement of the intestines. 2d. This is caused by a slight curve in the back, and might be brought about by the fowls having to crowd through a small opening in the coop.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions in your next month's issue: I keep pure bred Wyandottes and Enbden geese. Would it be

all right to mate cockerels with pullets of the same hatch? If I send away for cockerels can I use them next year on their offspring? What is the best age for caponizing? When are they past the age? Would it be profitable here? How old had they ought to be when sold? Do Rose Comb White Wyandottes ever breed a single comb bird. How much by measure, per dozen, of wheat, and oats, and corn should laying hens have per day this time of year? Will they get too fat on oats and corn? Is bran a good feed if wheat is used also? W. R. C. Comstock, Neb.

Answer:—Cockerels and pullets of the same hatch may be mated with good results. Inbreeding can be done for a year or two without any danger, but new blood should be added from time to time. Caponizing should be done when the cockerels are three to four months old. We do not believe it would be profitable in your locality. They should be marketed as soon as the size and weight is obtained. It is not an uncommon occurrence for single combs to appear in White Wyandottes. Fowls should be fed just what they will eat up greedily. Where too much corn is fed fowls will get too fat. Corn should not be fed except in cold weather. Wheat and oats make the best feed for laying hens. Bran is also good.

Editor American Poultry Journal.

Dear Sir: Please answer in your February issue what causes hens to eat their droppings, and do you know of any cure? F. R. Emaus, Pa.

Answer:—This is caused by a lack of green food and exercise. Fowls should be supplied with plenty of green food, such as cabbage and sugar beets, in the winter. They should also be given plenty of exercise. This can be done by scattering their grain in a deep litter of straw or chaff.

Editor American Poultry Journal.

Dear Sir: Please answer following questions in your next issue: 1. I am starting in to breed pure blood Barred Plymouth Rocks on farm of unlimited free range. I do not want to pen any birds at all. Will it be possible or advisable for me this season to mate forty

THE NEW \$5.00 CHAMPION BROODER

Thousands of chicks are lost through improper brooding. We will show you how to raise all you hatch! show you how to stop the big death rate among your chicks, show you how to raise chicks without leg weakness, bowel disease or drooping wings and show you how to raise them at all times of the year out-doors without the use of expensive brooder houses. We can prove to you how others have done all this and more. Here's how The Champion works: Villa Ridge, Ill. "Champion Brooder is in use and I must say it is a dandy: I never saw anything so complete, have 15 different makes but yours is the only one my foreman enjoys taking care of."—K. H. Winters, Nashville, Tenn. "I have 2 of your Brooders that I used last year and I don't lose a chick."—F. A. Jones, Fishkill Landing, N. Y. "We think your Brooders are all, easy to handle and perfectly safe. We have not lost a chick through the Brooders, and we have 19 of them, and we expect to use twice as many this season."—Haight & Knight, Seymour, Conn. "The Brooder I bought of you three years ago has been out doors all winter with chicks in it that were hatched late in the fall. The weather has been 10 degrees below zero and I never lost a chick." J. C. Holden.

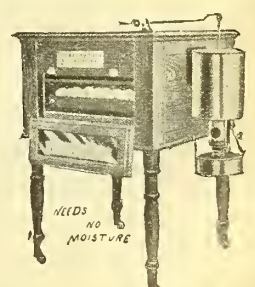

1907 Model Combined Brooder and Coop

Our new 1907 model Champion can be turned into a weaning coop in one minute. Just lift out the heater and you have a first-class coop for the chicks after they are old enough to do without heat. Coop is large enough for 50 chicks until 10 to 12 weeks old. This is a great feature and saves you the expense of an extra coop. Our improved safety pneumatic lamp is now used in them; it cannot explode or catch fire. Needs no water pans or water jackets. Best and simplest lamp ever used in a brooder. We spare no expense to make the Champion the best in the world. Don't pay \$12 for a brooder which the Champion can knock clear out of sight. Don't waste your time raising weaklings—use the Champion and raise big chickens. The ones that weigh 2½ lbs. at 10 weeks. The big kind, the kind you want, the kind your customers want and the kind the money is in. The Champion is a big Brooder, holds 75 to 100 chicks, is made in a big factory and sold for little money; \$5.

THE CHAMPION INCUBATOR

The Champion Incubator is a non-moisture hatcher, strictly up-to-date, automatic in regulation. Has new removable nursery chick tray. 120-egg size, price \$15. Warranted the simplest and easiest to care for. Our free "Book of the Champions" tells the rest. Send for it.

hens of the standard markings, letting them run at free range all the time? 2. Can I by this system keep at all times 500 laying hens and still retain standard markings, and of course only use one mating? 3. If I can use this system will want to build one house to accommodate 500 laying hens. How many can I keep in each section? L. M.

Pleasant City, Ohio.

Answer:—1. This is possible if you do not desire to breed for exhibition. 2. No. 3. Not over twenty-five.

Editor American Poultry Journal.

Dear Sir: I have built a poultry house 10 by 26 feet, 6 feet high at the rear and 8 feet high at the front. I have lathed and plastered this house, but find that it is very damp in this house. What must I do to prevent it from being damp? Is it a good plan to plaster a poultry house? What will take place of plaster so as to make it warm in the winter? D. C.

Butler, S. D.

Answer:—Improper ventilation is the cause of your house being damp. To overcome this put muslin over some of the windows. If your house had been thoroughly dried out and the ventilation is good there is no reason why it should be damp. A poultry house that is lined on the inside with tar paper and lumber will be as warm as when plastered.

Editor American Poultry Journal.

Dear Sir: Can you inform me where I can obtain a table showing the properties of different grains and foodstuffs, that is, the relative amounts of carbohydrates, protein, ether extract, etc. I presume that there is such a table published, but have never seen one.

Tyngsboro, Mass. F. G. McK.

Answer:—This can be obtained from Agricultural Department, Washington, D. C.

Editor American Poultry Journal.

Dear Sir: I desire to ask you for some information. 1. How much green bone can be fed for best results to a flock of thirty Anconas? How often can it be fed? 2. Had an Ancona rooster die suddenly; on opening him I found his liver about eight times as large as it should be. What is the cause? Would too much green bone or meat cause it? H. C. S.

Berea, Ohio.

Answer:—1. Two ounces per fowl about three times a week. 2. It is always difficult to tell the exact cause of liver trouble, but it is usually caused by too much of one kind of food and a lack of green stuff.

Editor American Poultry Journal.

Dear Sir: Please answer this question in your next issue: What is meant by a rye tail, speaking of a cock or a cockerel? C. J.

Oakley, Utah.

Answer:—A rye tail is one that is crooked and not in the shape called for by the Standard.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue the following questions: Last spring I purchased of a friend a number of settings of Single Comb Rhode Island Red eggs. The pullets from these eggs are very light in color, some nearly white, while the cockerels

from the same settings are quite dark. 1. Are these pure bloods? 2. Is there any way of recording chickens so as to identify the pure bred from others? 3. What is meant by scoring? 4. Which strain of the Reds is considered the best? 5. In breeding should I follow the one strain or should I introduce other strains in my flock? 6. What should I feed my poultry in winter for the production of eggs? 7. How many laying hens should be kept together where they have free range, for best results? 8. In starting in the poultry business would you advise me to procure eggs or birds. 9. In breeding S. C. Rhode Island Reds should I join that club? Would I have better success if I did. E. M.

Nottawa, Mich.

Answer:—These are no doubt pure bred, but the eggs were evidently from a cockerel mating. 2d. No. 3d. You should procure a copy of the American Standard of Perfection, which will give you full information about scoring fowls. Price of this book is \$1.50, for sale by American Poultry Journal Pub. Co., Chicago, Ill. 4th. There are several good strains of Reds, but we know of no best strain. 5th. If your strain is all right we would not advise introducing other strains into it. This is done only where improvement is desired. 6th. Read answer to T. B. H. in this issue. 7th. Not over twenty-five should be allowed to roost in the same room. 8th. Birds will generally prove the most satisfactory. 9th. We always advise every breeder to join a club and thus help to create more interest in their particular variety. The more interest that is taken in your variety the greater are your chances for success.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in an early issue of American Poultry Journal:

1. What is the best feed for young turkeys?
2. Is it best to pen turkeys while young?
3. What is the best feed for young ducks?
4. Is it best to pen young ducks?

Parker, Ind. A. W. K.

Answer:—Some advocate a soft feed for young turkeys, but we are of the opinion that one of the various chick foods advertised for this purpose is best. 2d. Yes. 3d. Read answer to F. T. in this issue. 4th. Yes, until they are three or four weeks old.

Editor American Poultry Journal.

Dear Sir: Please answer the following: I have built a new poultry house 10x16 on two-story plan, and am keeping 17 pullets and cock on the upper floor and the same number on the lower floor. I never let them out in bad weather. Please let me know if I am crowding them at this number to be shut up all the time. C. F. S.

Zanesville, Ohio.

Answer:—This is enough room for 17 fowls, but they should be allowed to run out as much as possible.

Editor American Poultry Journal.

Dear Sir: Please tell me in your February issue what is the matter with my White Cochins and a cure. They are about eighteen months old and eat well, but they are so poor I am ashamed of them. They are free from lice, the

Amatite ROOFING

NEEDS NO PAINT

DO YOU USE A ROOFING THAT
REQUIRES PAINTING AND COATING?

If so, do you realize that the coating and painting will probably cost as much, if not more, than the first cost of the roof itself?

When you buy a roofing that has to be coated, you must consider the cost of maintenance as well as the first cost. If you do this, you will find that coated roofings cost you just about twice the original cost.

If you try to save money by not coating such roofs they will soon leak and rot away.

The best way out of the difficulty is to buy a roofing that requires no coating, such as Amatite. This Ready Roofing has a special mineral surface which makes painting entirely unnecessary. The first cost of Amatite is the whole cost.

After it is once laid on the roof it costs you nothing to keep up.

Furthermore, the price of Amatite in the first place is less than that of almost any other ready roofing. It is by far the lowest priced of the good ready roofings.

When you get prices don't forget to count in the cost of putting on paint every year, and you will be sure to come back to Amatite as the cheapest and best.

FREE SAMPLE

Let us send you at once a SAMPLE of AMATITE and a Booklet of information about it. We want you to see how much better it is than the kind that has to be painted.

BIG MONEY IN POULTRY.

Our big Poultry Book with many new illustrations tells how to make it; also how to feed, breed, grow and market Poultry for best results. Plans for houses and a great mass of useful information. Tells how to start small and grow big. Illustrates and describes the largest pure bred Poultry Farm in the world; tells about our many varieties; quotes lowest prices on Fowls, Eggs, Incubators and Brooders. Mailed for 4c postage.

FRANK FOY, BOX T.B. • DES MOINES, IOWA

house is clean and I feed them wheat, oats, cracked corn in litter and bran, middlings, corn meal and table scraps as a mash. I purchased them about three months ago and they were that way when I got them. The cock has never crowed since I had him.

Petersburg, Ky. C. G.

Answer:—We are unable to say why your Cochins are so poor in flesh. Feed them plenty of whole corn and a little fresh meat about three times a week. Also dust them thoroughly with a good lice powder about once a week, for we believe they are lousy, although you say they are not.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue this question: Did you ever know of any one raising partridges, if so, what success did they have? Where I might be able to secure some eggs.

C. B. H.

Montgomery, Ala.

Answer:—There are a number of breeders of partridges in the U. S., but we do not know their address.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue: 1. Are the Hamburgs better layers than the Brown Leghorns? 2. Ducks hatched in May should they lay this winter? 3. Is there any way to tell a drake from a hen? 4. What is the proper feed for little ducks?

Chester, W. Va. F. T.

Answer:—1. Hamburgs of any variety are equally as good layers as Brown Leghorns, but their eggs are much smaller. 2. Ducks hatched as late as May will not lay in the following winter, but will in the spring. 3. A drake of any variety has indistinctly two small feathers in his tail turned upwards, whereas a duck is deficient of this ornament. 4. The proper food for young ducklings depends upon their age. When from one to five days old they need boiled egg and bread crumbs finely chopped; after that age meal, preference given to oatmeal, and middlings in like proportion until they are three to four weeks old. Then grain in their water.

Editor American Poultry Journal.

Dear Sir: I have a S. C. W. Leghorn hen that seems to have something lodged in her wind pipe. She coughs and chokes almost continually, especially when eating. When not choking she wheezes continually with every breath. She is very poor and never laid an egg to my knowledge. She has been this way all summer. 1. What ails her and is there any remedy? 2. Is she fit for table use? 3. Is a cockerel unfit for show purposes if his comb has as many as eight and nine points? 4. Why do my cockerel's feathers look brassy while the pullets do not, and is that a disqualification for show purposes? 5. Is it a sign they are breeding back when one has a black spot occasionally on a feather.

Mrs. J. H. R.

Mattoon, Ill.

Answer:—Your hen is suffering from a continuation of ulcers in her throat. 2. She would not be fit for the table, especially so as you say that she is very poor. You had better kill her. 3. A cockerel (and we suppose it to be a Leghorn) with as many as eight or nine peaks in his comb is not at all fit for show purposes, and not even for

breeding purposes with that gross fault. 4. The brassiness in your cockerels is a great detriment against them being fit for show purposes. They will always be disqualified. Those occasional black spots of feathers show that at some time there has been a cross made in their fore parentage.

Editor American Poultry Journal.

Dear Sir: Please answer in your question and answer department: What was the matter with my Rhode Island Red hen. When I first noticed her she was standing around with her eyes closed; when I disturbed her she began turning around, all the time the same way, and when she was not turning around she would turn her head slowly as far as she could, always the same way. For three days she neither ate nor drank, and I discovered she was stone blind, though her eyes looked perfectly natural and healthy; finally she began to act as though she wanted to eat, but was unable to locate the feed and water without assistance, so I killed her. 2d. What is the cause and cure for chicken pox? R. T. M.

Sulphur Springs, Texas.

Answer:—1st. Your hen had severe case of blind staggers, caused by too much blood in the head. When first noticed a small incision should be made in the roof of the mouth. This will permit the surplus blood to escape and prevent blindness. 2d. Chicken pox is usually caused by damp, filthy surroundings and is very hard to get rid of unless the house and yards are thoroughly cleaned and disinfected. The curative treatment consists of bathing the affected parts with soap and water in order to soften the crusts and afterwards apply a solution of sulphate of copper (bluestone), a dram to one-half pint of water. Carbolic ointment will also be found to be very beneficial.

Editor American Poultry Journal.

Dear Sir: Would be pleased if you would answer the following questions: 1. How can you tell the male goose from the female? 2. How much ground would 50 ducks need to run on if proper care is taken? C. L. B.

Horatio, Ohio.

Answer:—1. The question of distinguishing the male from the female geese has often been asked and answered in these columns. The voice of the gander is louder and the females more silvery. Then again the gander when approaching will bend his head and neck close to the ground and "hiss," whereas the goose will keep it erect. The sexes have often been detected by the aid of a dog, which when admitted to pens, all females will gather to the furthest wall or corner, and the males, with bended necks, will hiss. 2. With proper care and attention, 50 ducks may be run on a very small space of ground; 50 feet by 12 to 15 feet would suffice.

Editor American Poultry Journal.

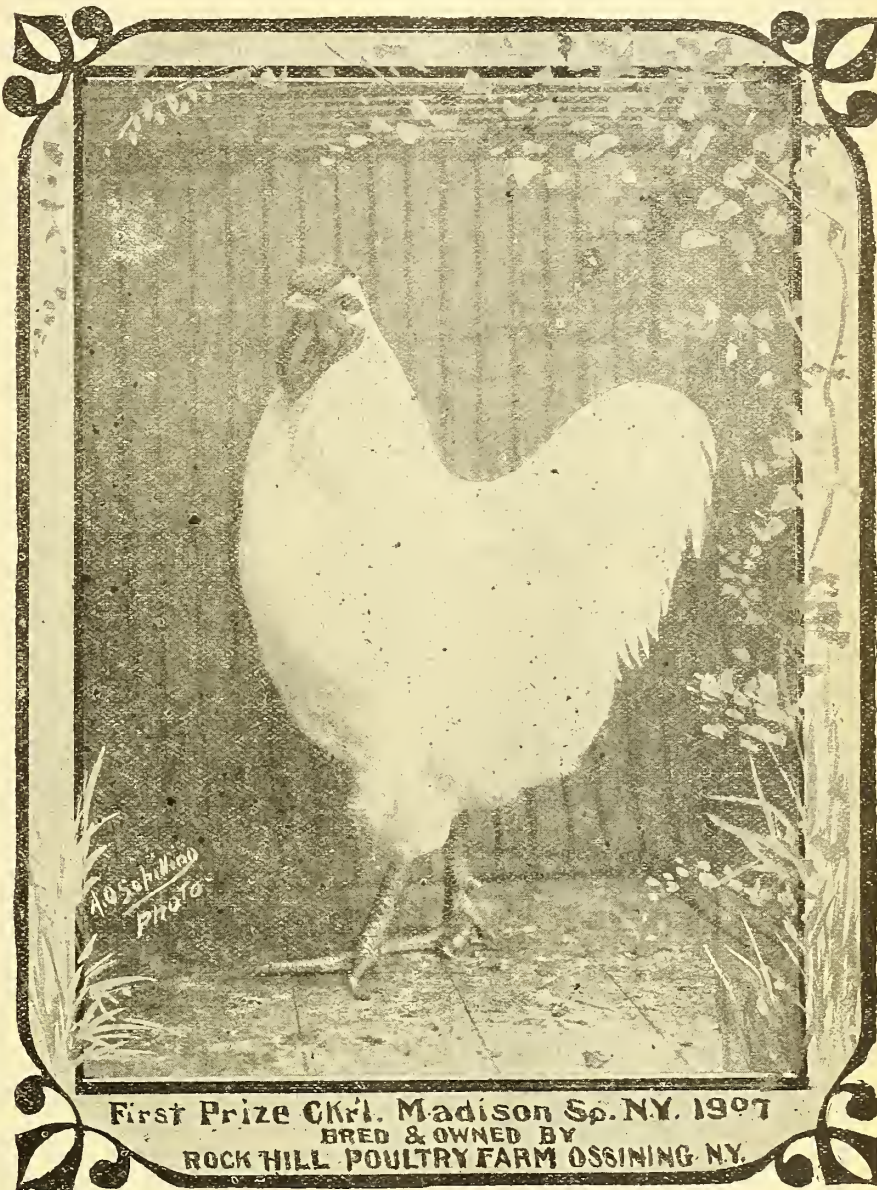

Dear Sir: Will you please answer the following questions in next issue of your journal: 1. I had a hen three years old, very fine and strong; one day she lay a big three yolk egg; after she lay some eggs of ordinary size until she became broody and hatched ten strong chickens; seven weeks later she lay four eggs of ordinary size and over again she lay another big two yolk egg;

from this day she never lay eggs in good condition, but some soft-shell and some the white only or the yolk only, and she cackles very rare. I killed her and examined, found the organs very affected, and many eggs, good and bad ones, too.

2. I had a pullet six months old, very fat and strong; the day before yesterday she died at four o'clock in the morning; her nostril and mouth were stained with blood; examined I found in her heart, liver and under the wings

obstructed her egg organ (specially her oviduct) and has never thoroughly recovered from it. Her broodiness and hatching and rearing a brood afterwards certainly gave the organ a rest; but then again laying a double-yolked egg repeated the tragedy and she never recovered from it, and could not possibly have done so.

2. That six months' old pullet of yours that died was not only overfat internally, which caused those bloodstains, but she was also bordering very

First prize White Wyandotte cockerel at Madison Square Garden, N. Y., 1907. Bred and owned by Rock Hill Poultry Farm, Ossining, N. Y.

coagulated blood, and her liver was yellow spotted.

3. I have some chickens, six weeks old, very strong, except one, which, although he has very good plumage, has his head without feathers; he does not grow, for he is only half in size of the other chickens, having been of the same hatching. All the fowls have free range and feeding with corn, wheat, bread, meat, cooked potatoes, rice and good, fresh water. N. A.

Bogota, Colombia, S. A.

Answer:—1. Your hen, at the age of three years, laying a three-yolked egg

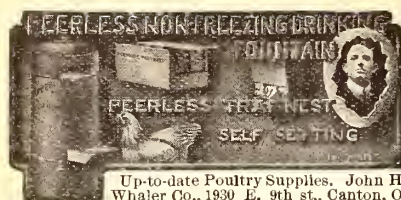

much to liver and heart fattening.

3. Your chicken with no feathers on the head is affected by lice in numbers, which devour feathers as they grow; these insects also prevent the bird from developing into any size.

By the way you state, all your chickens, with their free range, seem to be overfed. You had better stop feeding corn.

Editor American Poultry Journal.

and some White ones. My chickens stand around and make a noise as though they had something in their throats and a yellowish, thick water comes from their nostrils and a yellowish substance in the roof of their mouths. What is the disease and cure?

Russell, Ky.

F. A. H.

Answer:—Your fowls are suffering from a severe cold, which is bordering on roup, and if not attended to promptly will develop into canker. Put 15 to 18 drops (no more) of carbolic acid in each gallon of drinking water. This is a remedy with which we have of late been experimenting very successfully.

Editor American Poultry Journal.

Dear Sir: I am a subscriber to your paper and would like to ask some questions to be answered in your next issue: I have two lots 25 feet wide by 60 feet long, and two houses, 6 feet wide by 12 feet long. How many birds, say Partridge Cochins and White Wyandottes, can I keep in each? 2. What can I plant in yards to make green feed in spring. Yard is in an orchard and too shady for grass. Will Essex rape grow in the shade? 3. I have heard of a liquid louse killer used by painting inside of a box and placing bird in same for a few minutes, but can't find out the name of liquid or where it can be bought. A. E. P.

Huntsville, Ohio.

Answer:—The two hen houses you mention would only be large enough to accommodate a dozen each of large sized fowls as mentioned, although the size of the runs is large enough to accommodate twice that number or more. Essex rape will do very well for spring green food in your shady orchard, although were we you we would give rye a chance as a trial, which could be cut when quite young. There are several liquid lice killers advertised in our columns, by such firms as Geo. H. Lee Co., Chicago Poultry Supply House, O. K. Stock Food Co., etc. All poultry supply houses sell it.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions in the next issue of the American Poultry Journal: I have a nice Plymouth Rock pullet that is in a quiver all the time. Her head shakes and she walks very unsteady. She eats well, and works on the manure pile with the rest, apparently healthy in other respects. What is the cause and what can I do for her? Defiance, Ohio. L. D. S.

Answer:—Your hen is evidently bordering to a case of staggers or megrims; the only thing for you to do with her, as it is not too far gone with her yet, is to cut a small incision with the aid of a sharp pen knife in the roof of her mouth and let it bleed slightly; this will cure her completely.

Editor American Poultry Journal.

Dear Sir: Please answer the following in the Question and Answer department of American Poultry Journal: 1st. I have some chickens troubled with some kind of scabies. Some of them it starts in the eyes or on one side of head, and close the eye up and then continue to get more scabby. First they appear light yellow and then turn dark. It seems as if they were scratching till it bleeds. Would you call this roup or is it something else. I am get-

ting anxious to find out, as it seems to be of a contagious nature. 2d. What kind of feed would you recommend as everyday food and how many varieties for a flock of about 100 birds, confined in a pen 100x50 feet? 3d. How much food each meal. J. F. P.

Osage City, Ill.

Answer:—Your fowls so affected have decidedly roup, which is leading them to cancers; it is most contagious. 2. Everyday food to be recommended is warm mash of some sort in the morning; finely cut up green stuff at mid-day, and at roosting time grain, and as much variety as possible, given alternately each evening, but only one kind at a meal. 3. As much food at each meal as the birds will eat eagerly, and no more—none to be left over.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following: One of my prettiest Brown Leghorn pullets has "swollen head." One side of her head is swollen until the eye is completely hidden and the mouth and eye are running. Is this roup? If so, shall I kill her? Please tell me what to fumigate my coop with, as it is a new and good one, and my chickens are all valuable pullets. J. W. L.

Charleston, W. Va.

Answer:—1. Your Brown Leghorn pullet is most decidedly suffering from a severe case of roup, which is terminating in a profused canker. As she now appears to be by your description, the only remedy would be to kill her at once, as it is so very contagious. 2. To fumigate a chicken house well and thoroughly is, from our long standing experience, to fume one night tobacco (stems) followed next night by sulphur, or vice versa alternately. Two nights following would have almost similar effects with the one or the other of these same fumes, but it is never quite so penetrant as the two alternately.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer following questions in your columns: What is reason of fowls going light, as I have heard it called within the last six weeks. I have lost one cock and two hens. My fowls are Barred Rocks. The cock was hatched 1905, and I used him for breeding last spring and he moulted in good shape last fall, but during December he died. My hens are all good size and weight. What can be done for them if they are worth while doctoring? H. G. M.

Rochester, N. Y.

Answer:—"Going light," as it is termed, is consumption, for which there is no cure, and we always advise the killing of fowls so afflicted, to avoid breeding from such birds.

Editor American Poultry Journal.

Dear Sir: I am a subscriber and reader of A. P. J. Please answer the following in your "Questions" next month: I am running five incubators, two Prairie States and three Sure Hatch, all 200-egg size. Have hatched over 500 chicks now and 1,200 eggs to hatch soon. The 500 are all dying, twenty to twenty-five a day. I cannot locate one cause and am afraid I cannot raise any of the balance I hatch. First the temperature in incubator was not just 103 all the time. Once or twice during hatch it fell, say, to 101, and went up to 106 for a

few hours. One got to 107 for about five or six hours. Cooled and turned eggs twice a day, letting temperature go to 90 at first, then 80 to 90 last week. Eggs were very unfertile. I tested out 50 per cent every hatch, but would hatch all but few of good eggs and get bright chicks. We had very heavy rain and water got two inches deep in my incubator cellar for two days. Made some chicks come out pretty wet, but apparently all right. I left chicks in incubator twenty-four to thirty-six hours, then moved to brooder warmed to 90 to 100 degrees. I use the Nottage brooder and it seems to be very good. I make them myself as per directions. Two brooders got too warm and chicks would pant and cry, but not too hot over forty-five minutes to an hour. And I think I lose more from these two than other brooders. Some few die from bowel trouble, some leg weakness, but most from no cause I can see. Brooder house has dirt floor; chicks are put on shelves two feet from floor; none on floor. One inch litter, from mow, in brooder and their run.

Water came up pretty much around house and got floor in house very damp, but I keep a fire in stove, and room is warm. Plenty of sunshine when sun shines. Feed Chamberlain's chick feed, Pope's chick feed and millet seed. They have grit and water at all times and scratch for what they get. Seem to do fine and be strong, but find them lying around in their run every few hours. Some get very weak and won't leave brooder, or cannot, and die in brooder. When I take them out some eat as if very hungry; others won't eat at all and soon die. Then scatter out in brooder, but seems as if I have to keep 90 to 100 at all times or they want to crowd a little. I have thermometer in brooder at different places and get from 75 to 105 degrees of heat.

1. Do I keep them too hot? 2. Is it the eggs? 3. Is it dampness in brooder house? 4. Is it getting eggs too hot in incubators? 5. Is the brooder a good one? There is no lice; brooders clean. 6. Will getting them too hot cause the loss, or cause bowel trouble? Some seem to have a very light touch of bowel trouble or at least don't paste up like some do. 7. Does it hurt to keep bone meal and pulverized bone that smells bad in a brooder house? If you can answer this in the American Poultry Journal I will be ever so grateful. E. C. D.

Newman, Ill.

Answer:—The variation of a few degrees in the temperature during the hatching period will not affect the hatch or the chicks after they are hatched. The temperature in the incubator should be kept as near 103 degrees as possible until the eggs start to pip, when the heat should be increased to 104 or 105. After the chicks are hatched they should not be fed for at least forty-eight hours, and some people do not feed until they are sixty-four hours old. We believe your trouble is due to too much heat in your brooders. When the chicks are first put into the brooder the temperature of the brooder should not be above 95, where it should be kept for the first few days and then gradually reduced each day until it is down to 75 degrees. Not more than fifty chicks should be put together in one brooder, and in two weeks these should be divided into two lots of twenty-five each. Where too many chicks are put together they are very liable to crowd and those in the center become overheated and when exposed to the air

GREIDER'S FINE CATALOGUE

1907 tells all about pure-bred poultry and describes and illustrates 60 varieties. 10 beautiful natural color plates. Gives reasonable prices for stocks and eggs; how to cure diseases, kill lice, make money. This valuable book only 10 cts.

B. H. GREIDER - RHEEMS, PA.

"Natural and Artificial Duck Culture."

By James Rankin, So. Easton, Mass.
We have just published the fifth edition of our little book, "Natural and Artificial Duck Culture," enlarged, revised and illustrated, describing the growth and management of the little birds, from the time they leave the incubator until they reach the market. It includes food formulas to meet the different stages of growth, also the construction of buildings and management and care of incubators during the process of incubation, as well as our experience for the past thirty years in the business. Mailed to any address on receipt of 50 cents. (Stamps or Money Order.)

MAKE GOOD MONEY

In Poultry business. Others do it. Why not you? Our big illustrated book, "Profitable Poultry," tells how to breed, hatch, feed, grow and market to make lots of money. Starts you on the road to success. Describes most wonderful Poultry Farm in the world—32 kinds of fowls. Gives lowest prices on fowls, eggs, incubators, everything for Poultry. Mailed for 9 cents in postage. Berry's Poultry Farm, Box 74, Clarinda, Iowa.

MAKE LAY HENS

Our automatic self-feeding Poultry Drinking Fountain furnishes fresh pure water for fowls and makes them lay during cold weather when eggs bring a high price. It takes the chill from the henhouse. Costs about 5 cents a week for oil. Only non-freezing water fountain made. Shipped on approval. AUTOMATIC HATCHING CO., Detroit, Mich. We also manufacture the best Poultry Brooder ever made.

Send for Catalog 65

become chilled and bowel trouble and various other diseases set in and the chicks die very rapidly, from no apparent cause. We are not familiar with the brooder you are using, therefore cannot say whether it is at fault or not; but we are inclined to believe that the fault is yours. The principal things to avoid in rearing little chicks are crowding, too much feed and too much heat, and sudden and extreme changes in temperature. Do not try to hatch more chicks than you have brooder room for. For 500 chicks you should have at least ten brooders. Bone meal and pulverized bone that smells bad is not fit for food and should be buried. Beef scraps have a disagreeable odor, but are not injurious. Bone meal is practically odorless

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: 1. Are the White Wyandottes considered a healthy chicken? 2. Are white chickens of any breed as strong as dark feathered birds? 3. Are single combed Partridge Wyandottes as good as rose combed and state why, if not? 4. Are single combed Wyandottes, of any color, as good as rose comb? G. H. S.

Chicago, Ill.

Answer:—1. Yes. 2. Yes. 3. There is no recognized breed of single comb Wyandottes. 4. All varieties of Wyandottes should have rose combs.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions in your next issue: Which one of these cockerels would be the best one to breed from: One has some two or three light feathers in the point of wing. No. 2 is a larger bird and of good color, has good wings, buff to points, and his tail is just a little sideways, enough to notice. What is the cause of some of my late chicks having so much white in them, all bred from same stock? The earlier ones are best colored. W. T. H.

Palmyra, Ill.

Answer:—We would breed from the bird that has the best color. We are unable to say what the cause is for your late chicks having so much white in them.

Editor American Poultry Journal.

Dear Sir: Please answer in the next issue: I have a White Wyandotte cock and three hens bought last April (they were then cockerel and pullets). Would it be all right to mate this cock to these same hens and would it be wise to put five pullets in with them for good results? A. K. F.

Croswell, Mich.

Answer:—If the male bird is strong and vigorous it will be all right to use him on these hens this season; also to add five pullets to the pen.

Editor American Poultry Journal.

Dear Sir: Please answer in the next number of your journal these questions and oblige: Should a Rhode Island Red have white in ear lobes, to be pure blood? Please state what the marks should be. Should some be light buff and some dark buff in color? Should some come single and some double comb from the same flock of single comb, full blood stock? About feeding hens, it seems a foolish question to ask, but it has been a long time since I had anything to do with hens. When I was a boy at home the way we used to feed

them we took about half shorts or middlings and half corn meal and mixed it up quite dry. That was the morning meal; and we used to give the scraps from the table, mixed up with the dough, as we called it, and at night we would give the corn. That was what included their feed the whole year round.

Washington, R. I.

T. B. H.

Answer:—White in ear lobes of R. I. Reds is not permissible. The American Standard of Perfection will give you full information about color, etc. Well bred R. I. Reds should not show both single and rose comb from the same flock. Feed for laying hens can be made in various ways. One that we have found very good is as follows: For the morning feed we boil oats, to which we add bran and middlings until it is a dry, crumbly mass. In cold weather this is fed warm. At noon we feed whole wheat, in the litter. At night, in cold weather, we feed whole corn. In warm weather wheat and oats, equal parts. In addition to this we feed considerable green stuff, such as cabbage, beets, etc.; also feed beef scraps or raw ground bones, about three times a week. If other conditions are right this ration will produce eggs the year round.

Editor American Poultry Journal.

Dear Sir: Kindly answer the following questions in the February number, if possible: 1. Is it as practicable to lath and plaster a henhouse as to double board it, and is it as warm? 2. How early may Leghorn chicks be hatched in spring and yet with no danger of their moulting the same season? 3. Would it be practicable to use self feeders for little chicks from the very start, putting their chick feed, etc., into them? 4. Is it allowable to use a small amount of artificial heat in henhouse in winter, for laying fowls, when very cold weather? Hillsdale, Mich. C. S. H.

Answer:—It is practicable to lath and plaster a henhouse, but we prefer the double board with a four-inch air space. 2. April and May. 3. Yes; this is being done very extensively in the east. 4. Would not advocate the use of artificial heat in the henhouse, no matter how cold the weather.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in the next issue of your valuable paper: I had a fancy Barred Plymouth Rock pullet to gradually lose control of her left leg, until she got so bad her leg would lie in all positions on the floor, at which time I killed her. I found her liver to be covered with tiny specks and of a light color. During all the time—about three weeks—that it took to lose all control of her leg, she sang and her comb had perfect color. She ate very well and seemed to be in good health. Can you give me some light on the case? W. C. S.

South Haven, Mich.

Answer:—Rheumatism. This is usually caused by exposure to cold and dampness. Affected birds should have frequent change of rations, with plenty of green stuff. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water. Apply camphorated or carbolic ointment to the affected joints.

Editor American Poultry Journal.

Dear Sir: Please answer in question and answer department with regard to

pip in fowls, its evidence, cause and treatment. D. M. B.

Enfield, Mass.

Answer:—Pip in fowls is generally caused by the ground they run upon being saturated with a certain ingredient which develops it, and it is mostly met in young stock. Its treatment is fumes of some kind, allowing them to break into it for a few minutes each. A good dose of sulphur in their soft food for two or three following days will help it much.

Editor American Poultry Journal.

Dear Sir: Please answer in your question column of your next issue the following questions: How many chickens can be wintered profitably in a house twelve feet by ten feet floor space, with slant roof eight feet high and six feet on low side? Will house referred to accommodate as many of a large breed as of small breed? At what age should Brown Leghorn pullets commence to lay, fed of wheat, ground corn and oats mixed, cracked corn, and scraps from table, plenty of fresh water, with small range? C. K.

Deadwood, S. D.

Answer:—A house of that size would "winter" (but not profitably, as you suggest) a dozen chickens of a large breed, or fifteen of a smaller breed, or as many as eighteen of a diminutive breed. But such an attempt is never profitable in poultry breeding. The laying of Leghorns depends entirely upon the time of year they are hatched. The feeding of them has but little to do with it, if they are hatched late in the season, they will probably not commence laying until spring.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your next issue: "If two breeds of hens are kept in a yard with a male of one of the breeds, would it affect the color or otherwise an offspring of the hens of same breed as the male." M. K.

Hartford, Wis.

Answer:—No.

Editor American Poultry Journal.

Dear Sir: I would like to ask some questions. I have a Golden Sebright Bantam rooster, hatched in June, that is marked fine, every feather is golden, edged with black. I bought a pullet to mate him; her wing and tail feathers have a gray tinge, but her body feathers are perfect. Will her next feathers come right color? J. S. B.

Indianapolis, Ind.

Answer:—Your Sebright pullet you obtained with gray tinge in wing and tail feathers is very likely to moult them of the right type in color in her second moult; but as she is now, she will do well to breed from with your decidedly well tinged rooster, who will throw in the desired color in the youngsters bred from him.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following question in next issue: Will a little red on the earlobes of a R. C. Black Minorca cockerel disqualify him, or would he stand any chance of winning if entered at show? D. S.

Butler, Pa.

Answer:—Your Minorca male bird with its red tinge on his ear lobe will not stand the faintest chance of winning a prize at a show, unless it was

at a small show where the other birds in his class were also wrongly marked in one point or another.

Editor American Poultry Journal:

Dear Sir: Please answer the following questions in your question and answer department: 1. Are eggs from hens fed on poultry powder good for hatching? 2. Is salvage wheat good to feed? 3. How much green bone ought to be fed to a flock of twenty-five White Plymouth Rocks, and how often? 4. What whole grain is most productive to the egg production? 5. Is light through glass injurious to poultry? Put-in-Bay, O. O. A. S.

Answer:—1st. Yes. 2d. Usually it is not. 3d. Two ounces to each fowl three times a week is sufficient. 4th. Wheat and oats. 5th. No.

Editor American Poultry Journal:

Dear Sir: Will you kindly answer the following questions: 1st. How many turkey hens will mate to one Tom and get best results? 2. How old should a Tom be for good results? When are

hens too old? 3d. How many eggs is a setting and how long does it take to hatch them? 4th. Should young turkeys be fed and cared for the same as little chicks? 5th. How many times a season will the Bronze Turkeys set, and where and how is best to set them? 6th. How many turkey eggs can be set under a Rhode Island Red hen with best results? A. E. P.

Ogden, Utah.

Answer:—1st. From fifteen to twenty. 2d. Two to three years. Hens six years. 3d. Fifteen turkey eggs is considered a setting. Four weeks to incubate. 4th. In very much the same manner. 5th. Usually twice. They can be set in a manner similar to hens, except that they should be allowed more freedom and set in more obscure places, so that they will not be disturbed. 6th. Eleven.

Editor American Poultry Journal:

Dear Sir: Please tell me in your next issue what are the best trees or bushes for shade in the poultry runs? Chicago, Ill. O. W.

Answer:—Plum trees and raspberry bushes.

CHECKERBOARD BABY CHICKS

That's the kind that's worth raising—the kind that's full of life, energy and health—the kind that live and mature quickly—the kind there's the most money in. And Checkerboard Chicks are raised on

PURINA BABY CHICK FEED

There is no deception in Purina Poultry Feeds. Purina Baby Chick Feed is composed of more than a dozen varieties of grains and seeds, such as hulled oats, millet, flax, kafir, cracked wheat, cracked corn, etc., absolutely pure and sound and sweet. You can feed Purina Chick Feed with utmost confidence—it contains no smutty or burnt wheat, no trash, no drugs, and what is more, the Checkerboard Bags do not contain an ounce of grit to weigh them down. Grit can be purchased for one-fourth the price of feed.

CLEANED AND SCREENED. Every pound of Purina Baby Chick Feed is run over screens to take out all the meal and fine siftings that prove an absolute waste.

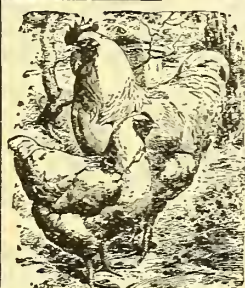

A feed for every purpose: Purina Mash—Purina Chick Feed—Purina Scratch Feed—Purina Alfalfa Meal.

Ask your dealer for the CHECKERBOARD BAG and you'll be sure to get the best for your money by all good feed dealers. If you can't get the CHECKERBOARD brand from your dealer, write us direct, and we'll see that you are supplied. Address

RALSTON PURINA MILLS, ST. LOUIS, MO.

START MAKING MONEY

RAISING POULTRY--IT PAYS

You don't need a large sum to begin with. A few dollars wisely spent will start you in a pleasant, money making, healthful business of your own with a chance to grow as time goes on. Our new book, "Poultry for Pleasure and Profit" with full description of our chickens, ducks, geese, turkeys, etc., containing plans for poultry houses, disease remedies, etc., is now ready. It contains valuable information and is

A BOOK THAT TELLS HOW

and where to buy pure bred poultry. It shows 35 best paying, popular varieties, bred and raised on Delavan Poultry Farm. Orders filled promptly for any number of birds, either sex, pairs, trios or pens. For exhibition or breeding purposes. Every bird guaranteed as represented or money refunded. Eggs for hatching guaranteed fertile and to reach you in good condition. Fine stock at reasonable prices. Book mailed for 10c postage. Write.

DELAVAN POULTRY FARM,

F. E. R. Goetz, Mgr.,

Box 10, Delavan, Wis.

LITTLE GEM HATCHERIES

cost only 30c. each. System is perfect. Thousands of poultry-raisers are hatching 400 to 1,500 chicks in them yearly. These four ladies have used them five years, hatching and raising over 1,000 chicks a year each. Instructive booklet free.

F. GRUNDY, Poultry Expert, Morrisonville, Ill.

Editor American Poultry Journal.

Dear Sir: Kindly tell me in your question and answer department if the following system of feeding is a good one to use this winter and will you improve it or make any suggestions you think best: I have a good and large feed hopper with three compartments, which I intend to put one in each pen containing beef scraps in one part, green cut clover in the middle and corn meal and bran mixed in the other compartment. This will be before them all the time, and in litter I will give them morning and night equal parts of cracked corn, wheat and oats. Will they eat cut clover dry from a hopper and is this a balanced ration? H. S. Grant City, Staten Island.

Answer:—We do not admire your way of feeding very much. In the first instance, food being always before the fowls in that three compartment hopper is a bad plan. And then your feeding cracked corn, wheat and oats in their litter in equal parts makes matters worse. Fowls will not eat cut clover dry from hoppers or from any other vessel and is not at all a balanced ration. We fear that you are too partial to corn in various forms; wheat and oats should take its place more equally.

Editor American Poultry Journal.

Dear Sir: Wish you would answer in your next number of American Poultry Journal two questions: 1st. What is the meaning of the word volume as used by you, for instance, your December number is marked volume 37. Is that the thirty-seventh issue of your journal? 2d. Why do you answer some question so "cranky," being you are running an answer and question department? J. F. C. Gd. Ledge, Mich.

Answer:—1. A volume is intended to signify a full year's publication of a certain journal. Our statement of thir-

ty-seventh volume, means its thirty-seventh year of publication of twelve numbers each volume. 2. We would very much like you to mention frankly (not crankily) which answer to inquiries was given in a "cranky" manner at your suggestion. Such information may help us greatly in the near future.

Editor American Poultry Journal.

Dear Sir: Kindly let me know in your next issue where I could obtain Bourbon Red turkeys for breeding purposes. D. G. T. Kenosha, Wis.

Answer:—To obtain a Bourbon Red turkey (male or female?) we should refer you to the advertisements in the American Poultry Journal, although we must say that it is not a variety generally cultivated, as it has no superior qualities, except its color.

Editor American Poultry Journal.

Dear Sir: In feeding oats for eggs should it be boiled or raw? Richmond, Ky. C. S. P.

Answer:—In feeding oats to laying hens (which should always be heavy oats) they are generally given raw, although if soaked in hot water (not boiled) and given warm, they have a greater tendency of promoting laying.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following questions in the next issue of your paper: I had twenty-five White Orpington pullets and cockerels, weighing about three pounds each, killed during the night by a weasel or some similar animal. Nearly all had a hole in the back near the tail, about the size of a cent, through which it appears, the blood was sucked. About twenty on a roost above were not touched, those killed being on the floor. Would one weasel kill twenty-five in a single night? Would such be fit to eat if properly dressed? What sort of a

trap should be used and how should it be baited to catch a weasel? Buffalo, N. Y. H. J. F.

Answer:—One weasel is not probable to have killed and sucked the blood in one night of that number of fowls, which, if properly dressed, would be fit to eat. Weasels are generally known to travel in pairs. Rat traps could be used to catch them with, but we had to resort to ferrets in such a case. Traps, if used, should be baited with raw meat, not any fat being attached to it.

Editor American Poultry Journal.

Dear Sir: I take the liberty of addressing you to ask for information regarding the raising of certain kinds of fancy stock. 1. Is there as great a demand for Buff Cochins and are they raised as extensively as the other standard varieties? 2. What part of our country is best adapted, in your opinion, to the raising of standard-bred Buff Cochins? Is the warm climate of our southern states, preferably southern California, where it is free from the extreme cold of our northern winters, more favorable to this breed of fowls? Burlington, Iowa. S.

Answer:—1. Buff Cochins are extensively raised in any of our states as utility poultry. 2. Buff Cochins can be bred in any state and climate. We should not advise you to adopt Buff Cochins nor any other kinds of Cochins as a special breed, so far as profit is concerned. The inquirer is located in as good a state as any (Iowa) for raising poultry profitably, but be near a good market town or city.

Editor American Poultry Journal.

Dear Sir: Kindly accommodate me with answers to the following: 1. How many laying hens can be kept with good results on a place 100x200 feet? 2. Would it be advisable to separate them? 3. What amount to each run? 4. If there is a book published on how to market eggs please give name and address. O. D. B.

Answer:—1. Your allotted space would accommodate 100 laying hens with good results. 2. It is always advisable to separate them in smaller flocks. 3. Your space could easily be divided in four allotments, each containing 25 fowls. 4. We do not know of a book being published, especially on the marketing of eggs.

Editor American Poultry Journal.

Dear Sir: Will you tell me in next number of your paper how much waterglass I will have to dissolve in one gallon of water for preserving eggs? D. C. V. Le Roy, Minn.

Answer:—If waterglass is obtained in crystal form, as you seem to suggest, we do not know what quantity of it would be needed to a gallon of water, to preserve eggs, as we have been accustomed to always obtain it in a liquid form.

Editor American Poultry Journal.

Dear Sir: Please answer through your journal the following: 1. How much feed in ounces, per head per day, for Leghorns? 2. How many Leghorns can be housed, for winter, in a warm house with 216 square feet of floor space, four feet high back, seven feet front, slanting roof, with no run, using 8x12 of this space for scratching pen,

BUFF COCHINS LINE-BRED

\$5 THE CYCLE HATCHER \$5

Is The ALL METAL, FIRE-PROOF, HATCHING WONDER

you have all heard of, or at least dreamed of. It takes up almost no room and hatches more chicks than half a dozen hens, with less trouble than the care of one hen. The nest, Heater, Lamp, Thermometer and Automatic Appliance to let off the surplus heat, make a complete Hatcher that can be operated by any child.

INCUBATOR, 50-EGG CAPACITY, \$5.00—BROODER, 50-CHICK CAPACITY, \$5.00

Write at once for further particulars.

THE CYCLE HATCHERY : : 879 North Leavitt St., Chicago, Illinois

6x6 for dust bath, balance roost, run, curtain front house, curtain front roost and kept clean, using straw for litter.

Kalamazoo, Mich. F. H. E.

Answer:—1. Feed per ounce or in any other quantity cannot possibly be determined to give per head per day or per meal, for Leghorns nor any other variety of fowl. All fowls should be given at each meal as much as they will eat eagerly and none to be left over. 2. About 60 fowls could be housed in a place of that size, which has no run, but having scratching shed, etc., as stated.

Editor American Poultry Journal:

Dear Sir: Please answer the following: 1st. How many chickens can I incubate, brood and raise successfully till broiler size, or say three months' old, on a basement floor, 40x54 feet, and a floor above of the same size, 40x54? 2d. Can we incubate chickens successfully all the year around? 3d. If I build a house for 200 breeding hens all in one length, how long would I need it and how wide? How many pens would you divide it into? Would you have board partitions or would wire netting be all right between pens? I mean this building to do for roosting place and scratching shed also. In that way would you place the partition between the two in the middle of the building, or would you have the roosting place smaller? 4th. I saw in your December number where you said the temperature of the poultry house for winter layers should be above freezing. How can this be done in North Dakota, or any of the northern states where the temperature falls below zero and some times 20 or 30 below? Would you advise artificial heat? 5th. Where the snow is on the ground from November 1 until April 1, would you keep your breeding stock in the house all winter? 6th. Would you advise having enough hens in a roosting room to keep it warm enough, even if it would be quite crowded? H. W. L.

Hatton, N. D.

Answer:—1st. We doubt very much whether you can raise any under these conditions. We certainly would not advise trying. 2d. Yes, if you can secure fertile eggs. 3d. In building a poultry house ten square feet should be allowed for each fowl. In a long house there should be a couple of board partitions; the balance can be made with boards at the bottom and wire at the top. The roosting room can be arranged in the same room with the scratching room. 4th. If the poultry house is properly built the temperature will not go much below the freezing point in any of the northern states. We would not advise the use of artificial heat in the poultry house. 5th. Yes. 6th. Yes, in the roosting room only.

Editor American Poultry Journal.

Dear Sir: I would be much obliged if you would in your next issue explain the trouble and give a remedy for two of my cockerels.

1. About a week ago one of them seemed to have difficulty in walking and finally was unable to stand up. He can move his legs, but cannot support his body; otherwise he appears in perfect health. He has been hopper fed with mixed grains, meat and grit. 2. The other bird at intervals of several days seems to have difficulty in breath-

ing. He opens his beak when breathing inward and at the same time makes a sound like a high pitched groan. I then put him in a warm room, and after a short time he appears all right. He is fed the same as the other invalid and roosts in an open front house.

Cherry Hill, N. J. A. D.

Answer:—Your cockerel No. 1 is either suffering from weakness in his legs or has cramp, occasioned by being kept or having run on damp ground, or having slept in a house where the floor was somewhat damp. In the first instance, meat and fresh cut bones will remedy it, and in the second case, heat will only remedy it. Your cockerel No. 2 is bordering on a case of roup, which at present is only a cold; he should have 15 to 18 drops of carbolic acid in each gallon of water to drink so long as the difficulty lasts.

Editor American Poultry Journal.

Dear Sir: Please answer through your paper: 1. Is beef blood good for poultry? 2. How should it be fed? 3. Hens fed poultry food during December and January would their eggs be as good for setting during March and April as those not fed poultry food? 4. How may the droppings be kept so they will not heat and what is their value a barrel? What two poultry papers printed in the east are good? M. N. P.

Wynantskill, N. Y.

Answer:—1. Beef blood is most excellent for poultry. 2. Beef blood should be fed to fowls as an admixture with meal of some kind, taking the place of water, skim milk and the like. 3. Hens fed "poultry" food during December or January will produce better eggs for setting in March or April than those not fed on "poultry" food, as you seem to determine it! 4. Poultry manure, to keep so that it will not heat, should be mixed with finely sifted ashes. The value differs somewhat upon the use to be made of it; for instance, if wanted to be used for growing onions, its value is high. We have known it to be sold at \$1 a barrel in some districts. For the growing of sweet corn it is also of great value, 60 to 75 cents a barrel having often been given. There are several good poultry

papers published in the eastern states, but it is not usual for us to mention special publications, as it often leads to likes and dislikes. But some of the eastern papers may take up these remarks of ours.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in the next issue of your journal: Is it a good plan to mate cockerels with pullets to produce good show birds? J. H. C.

Council Bluffs, Iowa.

Answer:—This all depends on the quality of the stock. If you know the breeding of your cockerels and pullets you can tell what the results will be; otherwise it will be experimenting, and you may get show birds and you may not. The same applies to older stock.

Editor American Poultry Journal.

Dear Sir: Please answer the following in the next issue of the American Poultry Journal: 1. How many Buff Leghorns can be successfully wintered in a house 14 by 8 feet and a run 21 feet by 20 feet? 2. How many White African Bantams in a pen 20 feet by 11 feet? 3. How large a coop would be needed to house the same number that the run will accommodate? 4. Are Buff Leghorns good winter layers? 5. Does yellow on the wings of a Rose Comb White African Bantam male make him unfit for show and breeding purposes? 6. Should a Buff Leghorn have uniform color of buff all over? 7. Could you tell me of a cheap and reliable trap-nest? 8. What is the highest number of eggs laid in one year to your knowledge? A. W. F.

Answer:—1. About a dozen Buff Leghorns or any other variety of medium sized fowl could be wintered in a house of the size mentioned, with that size of run attached. 2. Eighteen White African bantams could successfully be kept in a pen 20x11 feet. 3. A coop 12x6 feet would answer for that number of bantams. 4. Yes. Buff Leghorns are found to be most excellent winter layers, under suitable conditions. 5. Yellow on the wings of White African bantams disqualifies them from shows, but can be used for breeding purposes. 6. Buff Leghorns should be

Buff Wyandottes.

Winners at Rockford, Prophetstown, Downer's Grove, etc. Winning cockerel at Rockford scoring 944 by Shellabarger. Line bred for 10 years. Some choice cockerels for sale. Eggs for hatching. Send for egg circular.

CHARLES HOWISON, Box 463, Sandwich, Ill.

The World's Best BUFF WYANDOTTES.

At the great Chicago show, 1907, in competition with the best and largest breeders in the country I won first cock, first and fifth hen, 2d and 4th cockerel, first pullet, first pen. Also silver cup for best display and challenge cup for best display Wyandottes in show, all varieties competing.

RALPH W. STURTEVANT, DELAVAN, WIS.

uniform in color, even the underfeathers. 7. Several reliable trap nests are advertised in the American Poultry Journal every month. 8. If you mean the highest number of eggs laid by a Buff Leghorn in the course of a year, it was reported to us that 211 were laid. But if you intend it to be of any breed known it was 229 eggs to our knowledge. We were once told of 241 being laid, but we have no proofs to verify that statement, so it was not accepted by us.

BUFF ORPINGTONS

Bred from imported and first prize birds at Madison Square Garden, 1906. Eggs \$3 a setting, \$6 a hundred.

AGENTS WANTED.

Petaluma Incubator Co., Pacific Coast Agents.

Editor American Poultry Journal.

Dear Sir: From experience I have learned that it is safe to feed clover in any quantity to laying hens. Can the same be said of alfalfa, or must there be a limit in feeding alfalfa, to avoid fattening the fowls? In "Success With Poultry," at page 91, the nutritive ratio of red clover is given as 1 to 6; and the same ratio for alfalfa is given as 1 to 3.6. The ratio for linseed meal is still narrower, 1 to 1.6, as there given. I have understood that this is fattening, and that seems to contradict the table quoted. G. W. K.

Puyallup, Wash.

Answer:—We have always fed alfalfa in the same ration as cut clover, and with good results.

Editor American Poultry Journal:

Dear Sir: Please inform me in your next number of the best way of ventilating an incubator house. Intend building one of brick, putting about three feet under ground. D. H.

Phoenix, Ariz.

Answer:—There should be a ventilator in the roof to permit the foul air to escape. This, with the windows, will be sufficient.

Editor American Poultry Journal:

Dear Sir: Will you kindly advise me through your Question and Answer department what will remedy chickens laying diminutive eggs? W. C.

Coffeyville, Kan.

Answer:—This can only be remedied by proper breeding.

Money in Poultry.

Those interested in poultry and incubators will find it to their advantage to obtain Foy's new book "Money in Poultry," advertised elsewhere in this issue. It is one of the finest and most valuable books ever published. It is finely illustrated and contains a very large amount of practical information about the poultry business in general and is valuable as a reference book, telling the beginner how to start on a small or large scale, and how the largest pure bred poultry business in the world has been built up from a small beginning. Tells how to start right; how to make money raising fowls on the farm; how to line breed; how to win at shows; how to prevent and cure diseases; how to run an incubator and manage a brooder. This is the most valuable book for the beginner in poultry raising ever published. Revised and enlarged edition just issued. This book will be mailed for 4c, by addressing Frank Foy, Box B, Des Moines, Iowa.

SURE HATCH INCUBATOR CATALOG.

The 1907 catalogue of the Sure Hatch Incubator Company, of Fremont, Neb., is now out, and they will cheerfully send it to any reader of American Poultry Journal by mentioning this paper.

These people are carrying on a campaign of education at the same time that they are endeavoring to sell their goods, and no

poultryman should be without this valuable book. It consists of over 100 pages, beautifully printed and fully illustrated. It contains information sufficient for any beginner to successfully conduct the poultry business.

In the making of incubator catalogues the manufacturers are every year spending more effort in getting out good literature, giving better illustrations of their manufactured products, and in every way putting before the people in the best manner possible all the information and knowledge that it has taken them years to accumulate.

This catalogue of the Sure Hatch Incubator Company is a liberal education in itself and will be a great help to everyone in the poultry business. Send direct to them and mention American Poultry Journal.

Truckenbrod Bros., Mendota, Ill., Barred Plymouth Rock cockerels were the sensation at the great Chicago show by winning more prizes than all other exhibitors combined. They sold one bird for \$100 and two others for \$50 each, and other large sales. These birds were all up to weight, pure yellow legs and beaks and models in shape. Send for their neat circular and mention American Poultry Journal.

Cousins Incubator Company, Warren, Pa., made creditable exhibits at the recent New York and Boston shows. Their patent egg tray is simply marvelous. This machine is guaranteed to hatch every hatchable egg. We are personally acquainted with Mr. Cousins and his associates and have never heard of any complaints. Send for their illustrated catalogue and mention American Poultry Journal.

The following first prizes have been won recently by the De Graff Poultry Farm, of Amsterdam, N. Y., on S. C. Rhode Island Reds, which they specialize: Five firsts at Johnstown, N. Y.; first pen at Holyoke, Mass.; second and third cockerel at Wilkes-barre, Pa., besides winning second, fourth and fifth prizes at New York City in very strong classes.

Fred Wheeler, of Rutland, Vt., writes as follows: "I have three Barred Plymouth Rock hens which I would like to tell you about. They were six months old when they began to lay, the 25th of March, and laid until the 8th of November. In that time they laid 555 eggs. That is a little better than anything I have seen in the American Poultry Journal yet."

Hewes Bros., 407 Massachusetts avenue, Indianapolis, Ind., reports a fine business in poultry supplies. They carry a splendid line of all poultry appliances, feeds, etc., and are agents for the Prairie State Incubator Company. They are young men, worthy of confidence, and should be liberally patronized.

Wm. K. Lewis, of Dry Ridge, Ky., won at Cincinnati Poultry & Pet Stock Association, Cincinnati, O., Jan. 15 to 19, 1907, as follows: Buff Wyandottes, 2d cock, 4th and 5th cockerels, 1st, 2d and 5th pullets. Jubilee Orpingtons, 1st cockerel, 1st pullet. T. E. Orr and Frank Heck, judges.

Floyd C. Tabor, proprietor of the Parlor Poultry Yards, Worcester, N. Y., won the following prizes at the late Boston Show: 1st hen, 1st pullet, 2d and 3d cockerel, and special ribbons for best shaped female, special ribbon for best color female and H. C. cockerel; 1st cockerel at Auburn.

Fred E. Wright, of Monmouth, Ill., won at Fairfield Poultry Association, Fairfield, Iowa, November 27 to December 1, 1906, as follows: First cock, second cockerel, first and fifth pullets, first pen on S. C. Buff Orpingtons. Russell, judge.

East View Poultry Yards, Ballston Spa, N. Y., report the following winnings on their Light Brahmas at the show recently held at that place: 1st, 2d, 3d cock; 1st and 3d hen; 2d pen on old and young and two specials.

G. M. Beckington, Garden Prairie, Ill., has a choice lot of stock for sale of the various varieties he breeds. Look up his ad elsewhere in this issue and write him for prices. Mention American Poultry Journal.

Charles C. Reid, Delaware, Ohio breeder of Rhode Island Reds, informs us that he has no more stock for sale and that he has all his pens mated up for the egg season.

R. I. WHITE AND BARRED ROCKS Reds

Hardy, prolific, farm bred pure stock. For birds, moderate prices.
Eggs to hatch at 8 cents each. Write

WALTER SHERMAN

Citizen's Farm, Newport, R. I.

IS IT THE HEN'S FAULT?

It is so easy to blame everything on the hen, yet the average hen is in no condition to lay anywhere near 200 eggs a year. To have them produce that number it is absolutely necessary to supply just what is needed to make eggs, such as green food, cut bone, grit, shell, wheat, cornmeal, bran, corn, etc., and then to have each hen in such a healthy condition that she cannot help laying. Now, the latter is exactly the object of Pratt's Poultry Regulator (for thirty-five years called Pratt's Poultry Food). This supplies just what a hen requires that is confined and forced for profit. It puts every organ in perfect condition, and thus she is able to properly assimilate the food given and turn it into eggs and meat without waste. Hens today are egg machines forced to their limit, and where Pratt's Poultry Regulator is used success is assured. No preparation has ever equalled it; and the Pratt Food Company, who are the makers of the original poultry regulator of America, have for thirty-five years held a high place in the regard of all farmers and poultrymen. It has been well said that any man or woman who starts to use Pratt's Poultry Regulator, rump cure, lice killer, or any other of the remedies they make, becomes a lifelong, enthusiastic consumer. That means every article is a needed one, and one of merit, and are all sold under the guarantee, "money back if not satisfied." In every package of Pratt's Poultry Regulator will be found coupons good for valuable books and pictures, and the picture of one of these books is here illustrated. The editor of this paper heartily recommends Pratt's preparations to its readers.

IT WORKS LIKE A HEN.

Since man first tried to equal nature by hatching eggs and raising chicks artificially the constant effort of incubator men have been to produce a machine that would most nearly reproduce the methods of Old Mother Hen.

It is evident that incubator inventors have been working along the wrong lines, making machines with unnecessary room, appliances and expense. All that is really necessary is a warm nest, a heater to take the place of the hen and an abundant supply of fresh air.

For over twenty years the inventors of the Cycle Hatchers have been working along this line, for the purpose of making a practical, simple, durable and inexpensive

hatcher that would not require a special building in which to run it, or a skilled mechanic to operate it.

Their "Metal Mother" here illustrated is the result. It is truly a wonderful machine. It is constructed entirely of metal and asbestos felt, and has a very neat and compact appearance, weighing only twelve pounds when packed for shipment. One of its most distinctive features is that it hatches and broods at the same time. Letters from users indicate that the results are very successful. One man reports a hatch of forty chicks from forty-three eggs.

The Cycle people have proved that the quicker an egg is set after being laid the more likely it is to hatch a good strong chicken, one that it is worth our while to feed and care for. By using four Cycle hatch-brooders in place of an ordinary 200-egg machine it is possible to take a hatch off every five days and set eggs while they are fresh.

By addressing the Cycle Hatcher Company, Elmira, N. Y., and mentioning this paper, any of our readers can secure a copy of their handsome illustrated 1907 catalogue, which gives full particulars about this new machine.

Hunkydory Farm, of Pella, Iowa, won at Iowa State Poultry Show, Oskaloosa, December 25 to 28, 1906, as follows: 3d cockerel, score 94½; 2d pen, 2d hen, W. S. Russell, judge; ninety-six in W. P. Rock class.

THE 1907 GIRL YOURS FOR THE ASKING.

Have you made her acquaintance? Now is your only chance. After much trouble and expense the Sharples Separator Company, of West Chester, Pa., have succeeded beyond their hopes in reproducing from life, in the softest and daintiest colors, the sweetest dairy maid that ever graced a cream separator calendar or was ever offered by any cream separator company as a free picture suitable for framing. This calendar and this free picture are like the Sharples Dairy Tubular Cream Separator—you can't appreciate either of them until you see them. Worthy a place in every home. The Sharples Separator Company will send the calendar with this picture on it to you free for the names of two neighbors who keep cows but have no Tubular Cream Separator. Or they will send free the same picture, made larger for framing and without the calendar pad attached, for the names of five neighbors who keep cows but have no Tubular Cream Separator. Calendar and picture both sent free for names of seven neighbors who keep cows but have no Tubular. Write at once before the supply is gone, sending two names for the calendar with smaller picture on it, or five for the large picture without calendar pad attached, or seven for both. You must mention the name of this paper to get them. Address the Sharples Separator Company, West Chester, Pa., Chicago, Ill., Toronto, Can.

INCUBATOR IMPROVEMENT.

The accompanying illustration gives a very fair idea of the 1907 Gem Incubator. The enterprising manufacturers of this popular machine have added several improvements this season; among these is a new end regulator, as will be noted in the illustration. This arrangement allows an unobstructed top surface, which is very convenient.

Another improvement is the new device for turning the eggs. The walls of the incubator are made of extra thickness; the egg chamber is large and roomy, and they have introduced what they call an "Expanded Ventilation System," which automatically controls the ventilation without overheating, and the air is forced through the egg chamber without draught; by this means a natural condition is maintained during the hatching, which produces strong and robust chicks. There is also an improved boiler and heater which aids materially in carrying out this scheme of heating and ventilation. It is said that this

system works so perfectly that the machine is not affected by outside changes, either of heat or cold. In consequence, the Gem Incubator can be operated successfully either in winter or summer in an ordinary living room where it gets quite cool during the night and in the daytime is liable to be quite warm from the heat of a stove.

The 1907 Gem Incubator retains its former valuable conveniences in the way of the removable chick tray and nursery. This device makes cleaning an easy matter, and

as everyone knows who has operated an incubator, cleanliness is an important factor.

The prices charged for the Gem machines are very low considering the many advantages which this excellent incubator possesses. All who are interested in a first-class hatching machine should send for their handsome new 1907 catalogue, which fully describes their large line of various sizes and styles; it will be sent free on request.

Address the Gem Incubator Company, Trotwood, Ohio.

HELP your chicks grow. Read my Baby Chick Food Ad elsewhere in this paper. It will pay you. Geo. L. Harding, Binghamton, N. Y.

Six Blue Ribbons AT THE N. Y. State Fair

AT SYRACUSE, N. Y., 1906, Martin's White Wyandottes established a new record for the fair by winning every first prize. This was in the home of the White Wyandotte, competing with the string that won the prize for best display at Madison Square, N. Y., 1906. The total win was: Cocks, 1st and 3d; cks., 1st, 2d and 3d; hens, 1st; pullets, 1st, 2d; breeding pen (old), 1st; breeding pen (young), 1st.

ALSO FIRST COCK AND SECOND PULLET AT BOSTON, 1907

Hundreds of birds for sale of the very highest quality. Cocks and cks. \$5 to \$15; hens and pullets \$2 to \$5. Exhibition stock a matter of correspondence.

Owego, Tioga Co., N. Y.

GARDNER & DUNNING'S BARRED ROCKS.

While at Auburn, N. Y., last month a representative of the American Poultry Journal had the pleasure of making a thorough inspection of the poultry farm of Gardner & Dunning, where famous Barred Rocks are raised. The farm is complete in all its equipments. Messrs. Gardner & Dunning have been for years producing some of the world's best Barred Rocks, birds which annually win at the New York Show and in every other state in the Union. Here we found pen after pen of magnificent birds, ready to uphold the reputation of their firm and strain. These people have the unqualified endorsement of this Journal. A display pen of their stock at the Auburn Show was the delight of all fanciers.

U. R. FISHEL'S SPLENDID NEW CATALOG.

A notable achievement has been accomplished by U. R. Fishel, the White Plymouth Rock man, of Hope, Ind. It is a fact very apparent that the grade of literature that poultrymen are putting out is constantly increasing in workmanship and beauty, with corresponding value to the breeder. This was never better demonstrated than in the new catalogue that U. R. Fishel, the White Plymouth Rock man, of Hope, Ind., is just sending out.

One would have to look long through any line of industry or manufacturing to find a better piece of work, or anything more suitable than this catalogue; and it is without doubt the finest and most expensive catalogue that has come to us this season.

This is a book of sixty pages, with heavy paper cover, 8½x11 inches in size. It is illustrated with four original paintings in colors, besides magnificent black and white half-tones of his Plymouth Rocks; scenes from his 120-acre "Fishelton" farm; prize cups that his birds have won; while the reading matter is a complete educational treatise on poultry raising.

The birds illustrated in the catalogue are fully described, the price marked plain and instructions for ordering and shipping clearly given. It also contains illustrations and descriptions of Mrs. U. R. Fishel's famous bronze turkeys. Mr. Fishel also

makes a specialty of fox terriers, which are nicely illustrated.

Prominent judges and breeders have sent them valuable testimonials, and portraits of these men are given, accompanied by their autograph letters. During Mr. Fishel's experience he has received many complimentary notices from the poultry press and the best of these he has retained and published in this catalogue.

Besides the feature of the colored illustrations, which undoubtedly cost Mr. Fishel several thousand dollars, the catalogue is tastefully decorated with a faint blue border on each page, which beautifully sets off the splendid workmanship and the high quality of paper that is used in the book. It is hard to adequately describe this production, and the best thing for readers of American Poultry Journal to do is to send 20c to Mr. Fishel for a copy.

C. E. Spaugh, Rugby, Ind., the Barred Rock specialist, is offering eggs from choice matings at \$3 per 15. Mr. Spaugh has an enviable reputation as a breeder of Barred Plymouth Rocks and our readers who desire to improve their flock should write to him for prices on stock, as he has some choice birds for sale at very reasonable prices, considering quality. Look up his ad elsewhere in this issue. Mention American Poultry Journal when you write him.

T. E. Applegate, proprietor Oakwood Poultry Farm, Spickard, Mo., won at Missouri State Show on his Brown Leghorns as follows: 1st and 2d cock; 1st and 2d cockerel; 1st, 2d and 3d pullet; 1st, 2d and 4th hen; 1st and 2d pen. At Trenton, Mo., silver cup for the highest scoring pen; all varieties competed. At Illinois State Show, January 7-12, 1907: 1st and 2d cock; 1st, 2d and 4th cockerel; 1st, 2d and 4th pullets; 2d hen; 1st and 2d pen. All these winnings were made in strong competition. During the last three years Mr. Applegate has made a wonderful record with his Leghorns in the show room, a record that is not excelled by any Brown Leghorn breeder in the country. If any of our readers are desirous of securing a No. 1 stock they should get in communication with Mr. Applegate, who guarantees satisfaction in every way. Write him, and mention American Poultry Journal.

George W. Tracey, manager Beau Ideal Poultry Yards, reports the following winnings on Rhode Island Reds: At Poughkeepsie, N. Y., 1st cock, 1st hen, 1st cockerel, 1st pullet on Single Comb and 2d cock on Rose Comb. At Philmont, every first on Rose and Single Comb; also silver cup for best display, all varieties competing. At Madison Square Garden, 1907, 1st pullet, color special and silver cup. At Boston, 1907, 1st cockerel, 3d pullet and silver cup for best male. A record like the above shows that these yards produce the good ones, and our readers who are looking for Reds should write for prices and other information and mention American Poultry Journal.

Middle Falls, N. Y., December 3, 1906.
To Whom It May Concern:

This is to certify that I have this day sold my entire stock of Rose Comb Rhode Island Reds and good will to the De Graff Poultry Farm, Amsterdam, N. Y.

I have bred this Royal Red strain of Reds for six years and there is no better in this country, but, owing to selling my farm, I have disposed of my whole flock.

I trust that any of my old customers seeing this notice will not hesitate to stand by the strain that has been so satisfactory to them in the past.

Very respectfully yours,
(Signed) W. S. Crandall.

The Ohio Hatchery, formerly located at New Washington, Ohio, has moved to Bellevue, Ohio, and is called the Ohio Hatchery & Manufacturing Company. In their new location they will be better able to handle their large and growing trade, and they will have four express companies and the Electric Package Company, and as most of their output goes by express, this will be of great value to both them and their patrons. If you intend to invest in baby chicks this spring you should send for their circular and prices and mention American Poultry Journal.

We have received 1907 catalogue from F. G. Harrison & Sons, Berlin, Md., the progressive nurserymen. In a letter they

write that they have an exceptionally fine lot of apple, pear, plum, peach and cherry trees and strawberry plants that they want to supply to readers of American Poultry Journal. This catalogue is a very valuable one to those interested in nursery stock. It is finely illustrated and describes fully everything that they raise. The catalogue will be sent to anyone requesting it by mentioning that the ad was seen in the American Poultry Journal.

J. S. Haupt & Co., Easton, Pa., importers and breeders of Buff, Black and White Orpingtons, are advertising with us this month. They come to us well recommended and that they have the quality in their yards is shown by them winning first and special on R. C. Buff hen and second on R. C. Black pullet at Madison Square Garden, New York, January 1-5, 1907. The Orpingtons are becoming very popular in all sections of the country and the demand for good stock is far greater than the supply, but this firm informs us that they have a nice lot of stock to spare, therefore our readers should make a note of this and write them for prices. Mention American Poultry Journal.

The White Wyandotte class at the last Boston show was a hot one. Edward E. Ling, South Portland, Me., won 2d and 4th hen, also special for best cockerel and four pullets and best display. The hen, a very fine specimen, would easily have captured the blue ribbon had it not been for the fact that she had a broken tail feather. Mr. Ling refused \$100 for this specimen. J. S. Martin, Port Dover, Ont., Can., won 1st cockerel, 7th cockerel, 2d pullet, on White Wyandottes. The first cock was a very fine specimen, both in shape and color; we doubt whether this bird can be beaten anywhere, therefore is considered by many the best in the world.

F. L. Waterman & Son, Barrington, Ill., the Buff Wyandotte breeders, won as follows at Illinois State Show, Macomb, Ill., January 7-12, 1907, in a class of 105 Buff Wyandottes: 2d cock, 3d and 5th hen, 3d and 5th cockerel, 1st and 3d pullet, 1st pen, special for best colored cock, American Buff Wyandotte Club state cup for best cock, hen, cockerel and pullet; association special for best display and special for ten highest scoring females.

Oak Hill Poultry Yards, Indianapolis, Ind., are offering eggs from six grand pens of Columbian Wyandottes this season. The pens are made up of Danville, Cincinnati and Indianapolis winners. Our readers who are desirous of securing something good in this variety should correspond with the above yards and mention American Poultry Journal.

Bridgeman & York, Forest City, Mo., inform us that they made the following winnings on their White Wyandottes: Twenty-two firsts, sixteen seconds, thirteen thirds and three silver cups at Missouri State Show, Kansas City Show, Nebraska State Show and St. Joseph Show. This is a record to be proud of.

Henry T. Reed, of Camp Point, Ill., won at Western Illinois Poultry Show, Mount Sterling, Ill., December 4-7, 1906, as follows: Light Brahmas, 1st cock; 1st hen; 1st, 2d, 3d pullets; 1st pen. Ben S. Meyers, judge. At Illinois State Poultry Show, held at Macomb, Ill., January 7-12, 1907, won 1st cock, 1st hen, 1st cockerel, 1st pen, 3d hen; 3d, 4th pullet. James A. Tucker, judge.

Joe Coleman, Belleville, Ohio, on four entries S. C. Black Orpingtons won as follows at Auburn: First, second cockerel; first hen, second pullet. His first prize cockerel is the best Black Orpington male the writer ever has seen. He is the ideal type and remarkably clear and clean in color.

At the Auburn Show John H. Post, of Auburn, N. Y., exhibited a number of fine R. C. White Leghorns. Mr. Post is one of Auburn's most prominent and successful business men and is giving much time and attention to his fowls. He is prepared to supply eggs from extra choice pens.

Ernest J. Fish, of Strongsville, Ohio, won at Cleveland Fanciers' Club, Cleveland, Ohio, January 14 to 19, 1907, as follows: Buff Cochins, 1st and 3d cocks; 4th and 5th hens; 2d, 3d and 4th cockerels; 1st, 3d, 4th and 5th pullets; also special for best display of Buff Cochins, \$20 silver cup, thirty in Buff Cochins class.

Barred Ply. Rock Cockerels.

Bred from big show winners, \$2, \$3, \$5 and \$10 each. A few Mammoth Bronze Turkey toms bred from silver cup winners, \$10.00 and \$15.00 each. Free circular.

SAVE THE PAINTING.

By buying a ready roofing that never needs coating or painting, you can save a big load of work every year. Amatite Ready Roofing has a mineral surface that is self-protecting without paint. By using Amatite you can save all the cost of paint and, what is still more important, the trouble and responsibility of doing the work. If you neglect the painting of other kinds of roofing, you soon need a new roof, so there is trouble and expense either way. Remember that Amatite needs no coating. Send for a free sample and examine the firm, strong mineral surface. Address the nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans, Boston and Cincinnati.

GETTING YOUNG CHICKS SAFELY OVER THE CRITICAL PERIOD.

If all the chicks that are hatched every year lived through what is commonly termed the critical stage of their lives, that is, the first ten days or two weeks, the number of fowls raised to maturity for breeding purposes and market would be increased by nearly 50 per cent.

The problem of getting chicks safely over this point is no doubt the greatest drawback of any which confront those interested in poultry culture. It is a factor, the cause for which has been attributed to nearly everything connected with the artificial process of changing an egg to a chick, from the moment the egg has been placed in the incubator to the time the chick has finally closed its drooping eyelids forever in its struggle to weather the trying ordeal of the first few days of its life.

It is doubtful if those who have experienced this unfortunately, seemingly unaccountable circumstance, realize how much consideration, experiment and study has been devoted by experts and others keenly interested in this particular problem for the purpose of finding a successful remedy.

Those who have specialized on breeding have sought to find a solution in mating their pens to produce a higher fertility, more vigorous germ, purer blood, etc. Others have devoted their attention to the kind of brooder, hover, colony house, etc., that would give ideal conditions in temperature, ventilation and range as a means of giving the new-born chicks a start in life that would safely carry them over the "dead line," as it were. And still others have spent years in perfecting the machines which have superseded the "old hen" as hatchers in an endeavor to produce chicks with strength, life, vigor and activity that, on the day they popped out of the shell, they would have an "air"—an expression, if you please, they possessed "life that's eternal," except for the hatchet.

During the past summer the Prairie State Incubator Co. started out to solve this perplexing problem on an entirely different line and conducted a series of investigations and experiments that will intensely interest everyone anxious to learn how to overcome this ever prevalent loss.

The methods they pursued were particularly unique, yet so common-sense and practical that they gain the endorsement of all who have learned of them immediately, and the success which has been attained in a number of actual tests proves their investigation as being one of the greatest achievements of recent years.

At the outset they concluded that as nature held the secret of the cause for the loss of so many chicks during the first few days after hatching, the only successful solution would come through a better knowledge of her processes—her methods of hatching strong, vigorous chicks. With this "natural" clew they began studying Mrs. Hen, and so anxious were they to let nature have full, uninterrupted sway that they waited until the old hen "stole" her nest. Waited until the eggs were laid—until she began to set, and then they set to work. With the most accurate apparatus they could obtain they tested the temperature under the hen, the ventilation she allowed the eggs; obtained the humidity (moisture) from time to time, making very careful and accurate records of all this.

Their object was to find out just what kind of condition "nature" obtained, for they realized, and you have noticed that the hens which "stole" a march on you and brought off their own broods invariably brought off more chicks, better chicks than those you took the pains to set in a nice hand-made nest. But above all she rarely ever lost her chicks during the critical period. And why? Because they were

hatched right. That's the whole secret, and the Prairie State Company have discovered it.

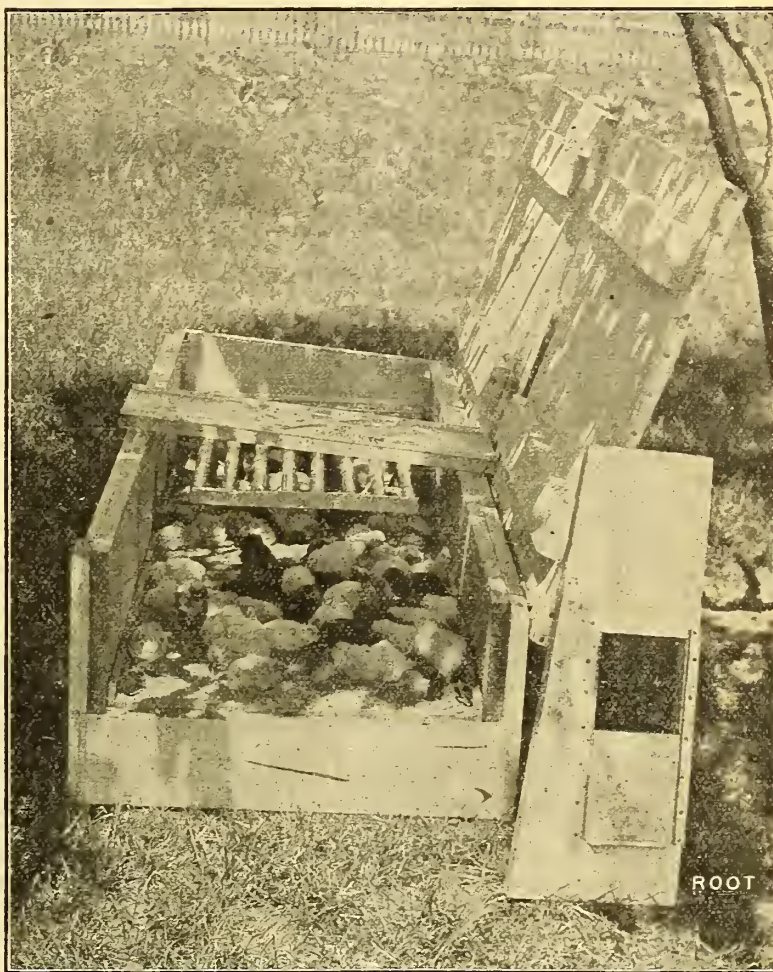

It is without question the greatest step ahead in artificial incubation ever attained. They applied this nature-knowledge to the reconstruction of the egg chamber in the 1907 Prairie State Incubator, and if you were fortunate enough to attend either the New York or Chicago shows you must have seen the biggest, strongest, happiest lot of incubator-hatched chicks you ever looked upon. Chicks just like the old hen that "stole" her nest brought off: chicks that were full of red blood and activity; with abundance of strength and vigor to cross the "dead line" and thrive. Read their advertisement in this issue—then send for their catalogue and get the most interesting bit of poultry news you have read in many a day. It tells all about over sixty

some of their standard poultry foods and preparations, among which are the well-known "Electric Poultry Foods," Harvey's Mixed Grains, beef, scraps, etc.

This firm has been established over 25 years and during that time has grown steadily until today it is one of the leading poultry supply houses in the country.

When a concern does a general mail-order business their location becomes a very important consideration on account of freight and express charges, and the time required for goods ordered to reach their destination. For this reason Buffalo is, on account of its central situation, the ideal location for a large poultry supply house. Buffalo's splendid shipping facilities by rail and water enable the Harvey Seed Co. to make prompt shipments at the lowest possible cost.

Their location in the second largest grain

The above picture shows the chicks sunning themselves in the Root Brooder on a warm summer day. The roof has been raised to let the sunlight in all around, and the chicks having just been fed, are taking their first nap of the day. The illustration shows ninety-five chicks in a 100-chick capacity machine. The shadow makes the machine look well filled, whereas there is room for many more chicks, for the Root Brooders are not overestimated as to capacity. They are built for practical purposes and do well the work intended for them. For circulars address The Root Incubator Company, Cleveland, Ohio.

experiments they made with hens and incubators, and how they improved their machine so that it "hatched like a hen" and hatched every fertile egg.

FREE SAMPLES.

All poultry keepers know the necessity of a green feed for poultry during the winter months. And many have proved to their own satisfaction that none equals cut alfalfa and cut clover for this purpose.

The Harvey Seed Co., of Buffalo, N. Y., inform us that they have on hand a large supply of cut alfalfa hay and cut clover hay which they secured at exceptionally low figures last season. And that for a limited time they will send free samples of them to any of our readers who will write mentioning our paper.

Many of our readers will need no introduction to this firm, having already used

center of this country enables them also to buy the very best fresh grains at special low prices impossible elsewhere.

These special advantages which have made it possible for the Harvey Seed Co. to offer goods of highest quality at lowest possible prices undoubtedly account in large measure for the steady and extensive growth of their business.

Full descriptions of their complete line of poultry foods and preparations, together with their stock of poultry and pigeon supplies, may be found in their large catalogue, which will be sent free if you write, mentioning this paper. Ask also for a copy of their catalogue of garden and field seeds.

Mrs. H. W. Hand, of White Hall, Ill., won at St. Louis Poultry Show, St. Louis, Mo., January 8-13, 1907, as follows: 2d cock, 1st cockerel, 3d pullet, on White Wyandottes. Sharpe Butterfield, judge.

HEN'S EGGS WANTED.

We've always had the "pie habit"—now we're coming into the limelight as egg eaters. Each year eighty millions of hungry Yankees want more "hen fruit" than sufficed for the previous year. It's really getting to be quite a serious question how we're going to get 'em fried, poached and scrambled in quantities sufficient to satisfy us. Supply doesn't seem to keep pace with demand—which fact accounts for the other fact—that lots of times we don't get any eggs at all.

Now if you travel about the country and keep your eyes open, you will be convinced that there are hens enough in sight to give every man his "two soft" seven mornings in the week if each hen did her full duty. Which observation brings us right square to the point where the "screw is loose"—they don't do it—no fault of the hens, either. The real trouble is, the hen-man doesn't know his business, or else he neglects it. He doesn't treat his hens in the way self-interest would seem to dictate. You can't expect a lot of hens confined in a closed house or yard, with no systematic or rational effort to supply what they would get in a natural state, to make a profit for the owner! Now if you are planning to make your whole living, or even your "pin money" out of hens, there are two or three things you should certainly remember. First, don't be satisfied with scrub hens. Second (and here is the real point), don't attempt to keep them without giving a regular daily ration of a good tonic. Nothing in hen culture gives so large a return as this one thing, and the only tonic to use is Dr. Hess' Poultry Pan-a-cea, prepared by Dr. Hess & Clark, of Ashland, Ohio, and sold by all dealers. This has been the experience of all successful poultrymen. This preparation is not a stimulant, like pepper or something of the kind that excites unnatural production for a time.

Dr. Hess' Poultry Pan-a-cea does its work in a different way by assisting the hen to fully digest her food and send each element to its proper part in the hen economy. Thus a daily feed makes bone, flesh, feathers and eggs, each to the extent of proper elements in the food. Dr. Hess tells us that Poultry Pan-a-cea is a true scientific preparation. It is the re-

sult of painstaking experiment in his own yards. So certain are Dr. Hess and Clark of the wonderful value of Poultry Pan-a-cea and Instant Louse Killer, that they cheerfully give a written guarantee that it will do all they say. If it doesn't you get your money back. Considering cost of ingredients and care taken in manufacture, these goods are remarkably cheap. It costs but a penny a day to feed thirty hens.

SURE HATCH BOOK A HUMMER.

Great Book on Incubators and Chicken Raising, Just Off the Press, Will Be Sent Our Readers Free.

The Sure Hatch people have gotten out what they call the Sure Hatch Book, which is certainly the finest book of its kind we have ever seen. It's a good big book of 102 pages, with a cover in three colors, that is a gem of art. The Sure Hatch Book is mighty well written, and scattered all through it are fine pictures that add immensely to its attractiveness.

The man who wrote it knew how to make everything clear and plain. It is more than a mere incubator and brooder catalogue. It is really a condensed Encyclopedia of Poultry Raising. Covers the whole subject thoroughly and interestingly. Tells how the best Incubators and Brooders are made. How to operate them profitably. How to have "Early-Hatched" Chickens. How to build practical "Hen Houses." How to build a "Colony House." How to build a "Double Poultry House" and "Scratch Shed."

Gives good advice on the kind of Fowls to keep; Improvement of Breeds; Care of Fowls; Selection of Stock for Breeding, etc. It contains the actual experiences of hundreds of successful poultry raisers. The Sure Hatch Book ought to be in the hands of every one of our readers. Beginners will find it a gold mine of practical help.

There is no need of anyone spending several dollars for books on poultry raising when you can get the Sure Hatch Book absolutely free for a postal. You can depend on what the Sure Hatch Book tells you, for its publishers, the Sure Hatch Incubator Company, are recognized authori-

ties on everything pertaining to incubators, brooders and poultry raising. The Sure Hatch incubator is the high-water mark of incubator making. It is a wonderful hatcher, used and recommended by a vast army of poultry raisers. Be sure to get a free copy of the Sure Hatch Book. Just drop a postal to the Sure Hatch Incubator Company, Box 6, Fremont, Neb., or to their eastern office, Dept. 6, Indianapolis, Ind., and they will send you the Sure Hatch Book free, postpaid, by return mail.

One sometimes hears a man say: "An incubator is all right for the expert, but not easy for the beginner to use."

The expert—the large producer—of poultry, has no more time and certainly less inclination to work over a complicated incubator than the novice. The poultry business is his living—with the beginner it is generally a recreation. The man who raises chickens for a living cannot afford to fuss and dabble over difficulties that would be just an entertaining problem for the beginner, and so he selects the best machine made and settles down to business.

The poultry business, when conducted as a business, must be carried on with the same regard to method as selling goods over a counter. When the eggs are put into the machine one must have an incubator that will hatch chicks that live out of every fertile egg. He may be dependent upon careless and inexperienced help the same as any other employer of labor. Therefore he must have machines that not only are virtually automatic, requiring the least amount of care, but that are simple to understand and manage, otherwise the combination of poor incubators and careless help would soon put him out of business.

A small increase in the number of chicks that die might easily make the difference between a profitable and a losing season. Therefore, as a matter of fact, an incubator that is simple and reliable enough for the beginner is the very machine the expert chooses, and everybody knows that only the best machines possess these qualities—many of them patented. He must be certain that the machine will do everything to supplement his experience and knowledge. A little oversight when using a poor incubator might prove fatal to the hatch, while the best machine is practically automatic—runs itself—and simply requires that the user fills the lamp and turns the eggs.

These thoughts are suggested by the appearance of the new 1907 catalogue of Cyphers Incubator Company, which has just been issued. It is really the biggest thing yet in poultry books of this kind, containing as it does 260 pages and over 500 illustrations. It has six chapters on raising poultry for eggs, raising broilers and roasters, raising ducks, etc., etc., and also contains testimonials from the largest poultry raisers in the country as to the reliability and dependability of the Cyphers incubators, all of which cannot help but be full of suggestive thought for the farmer who is thinking of making his first attempt at raising chickens by machines—the only way to make money. Raising chickens with hens these days is like cutting grain with a reaping hook.

The Cyphers Incubator Company's new catalogue is a book that ought to be in the hands of every person who wants to increase his knowledge of poultry raising, whether in the business for profit or recreation or both. This book is offered free to readers of this paper who will send the names and addresses of two acquaintances who keep poultry.

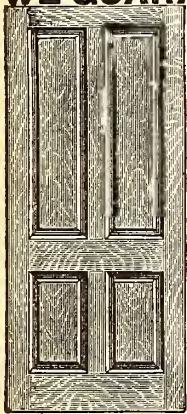

In sending for this great book it is best to address the office nearest to you, for the Cyphers company has branch offices at New York, Boston, Chicago, Kansas City or Oakland, Cal., while its main factory and office is at Buffalo, N. Y.

E. B. Barnett & Son, Michigantown, Ind., won on their Silver Wyandottes at the big Elwood show, Elwood, Ind., first and third cock; first and second hen; second and third cockerel; first pullet; second pen; one cash special, and one book special. At the Noblesville show, December 19-22, 1906, first, second, third and fourth cockerel; second cock; third pullet; fourth hen; second and third pen. Write for their newspaper circular, and mention American Poultry Journal.

George A. Barrows, Groton, N. Y., won at the Big Auburn (N. Y.) show, January 7-12, 1907, on his S. C. White Leghorns first and third cocks; fourth hen; third and fifth cockerels, and fourth pen; also club special for best cock; 99 high quality birds in class. Write him for prices and mention American Poultry Journal.

Grand FREE Millwork Catalogue

Saves 50 Per Cent on Windows, Doors and Building Material
5000 Bargains—Quality Guaranteed
WE GUARANTEE SAFE DELIVERY ANYWHERE

High Grade White Pine Door, Dealer's Price \$2.00, at 80¢

Our prices will astonish you. Don't buy anything in our line until you get our catalogue, the grandest woodwork catalogue published. It is FREE—write for it today. Address

CORDON, VAN TINE & CO., Station 025, DAVENPORT, IA.

INTERESTING NEW CATALOGUE.

Contains Many Helpful Suggestions for Farmers and Gardeners.

One of the handsomest and most interesting catalogues seen this year is the new 1907 catalogue of Planet, Jr., Farm and Garden Tools, just received from S. L. Allen & Co., Philadelphia. The information it gives about this famous line of labor-saving implements is sure to interest every farmer and gardener. It shows illustrations of every one of the forty-five different kinds of Planet, Jr., tools, and tells just what they do, besides showing photographs of successful gardening and some of the implements in actual use. There are seeders, wheel hoes, horse hoes, one and two-horse riding cultivators, harrows, orchard and beet cultivators—all designed by a practical farmer and made of the finest materials, with good, honest workmanship.

Some of the implements shown are combination tools that do almost everything needed for garden crops. The latest and most improved model is a combination hill and drill seeder, wheel hoe, cultivator and plow. It opens the furrow, sows any kind of garden seed accurately in hills or drills, covers, rolls the ground and marks the next row, all at one passage.

There is a Planet, Jr., for every need and all are guaranteed. More than a half million users appreciate their usefulness and are saving time and labor, and doing better work than they could possibly do by hand. Even these present users will be interested in the many new things which the catalogue contains.

The Planet, Jr., makers state they are willing to send a copy of this catalogue to every reader of this paper, whether or not he thinks he needs their implements. A postal card sent to S. L. Allen & Co., Box 1107T, Philadelphia, brings a copy by return mail.

We have received the new catalogue of the Old Trusty Incubator and Brooder, manufactured by M. M. Johnson Company, of Clay Center, Neb. As usual, this catalogue is one of wonderful interest and every reader of American Poultry Journal should send for one. It is magnificently illustrated with scenes of incubators in actual operation and always with delightful surroundings of home life, and especially the women and children, showing the intense interest that they take in the operation of these machines.

The reading matter is in the same happy strain that Mr. Johnson always talks to his friends, and everything he says is right from the heart. It can always be taken for granted that any literature that Mr. Johnson sends out will be unique in its character and forcible in its statements.

We have received a copy of the thirty-seventh annual catalogue and planters' guide issued by the Iowa Seed Company, Des Moines, Iowa. It is illustrated throughout and contains colored plates of seeds, corn and flowers. Full cultural directions for all seeds and plants are given at the head of each department so that anyone can succeed when using their seeds by following directions.

During the past year they have added seven greenhouses to their large establishment, making thirty-one in all, also increasing their cold storage capacity.

Our readers should send direct to them for copy of this catalogue.

L. Harris Crewe, Still Pond, Md., began a yearly display ad with us last month. While a new advertiser in American Poultry Journal, he has long been a great admirer of our paper, and also been a breeder of Pekin ducks many years. His pens are composed of a handsome lot of very large, healthy and beautiful birds, and noted for their laying qualities, breeding nothing but Rankin strain. His past season was successful far beyond his fondest hopes. If you will write and mention American Poultry Journal he will be glad to mail you descriptive folder.

Paul T. Hobart, of Roscoe, Ill., won at Rochelle Poultry Association, Rochelle, Ill., January 1-5, 1907, as follows: first cockerel, first hen, first pullet, first pen, seven specials; 30 in Brown Leghorn class. Charles McClave, judge.

A. F. Fairbank, of West Chicago, Ill., won at Downers Grove, Ill., January 4-5, 1907, as follows: Second cock, second pullet, third pullet, on White Plymouth Rocks. W. C. Pierce, judge.

MAKE GOOD MONEY IN POULTRY BUSINESS

Others are doing it. You can too with our big illustrated valuable book "Profitable Poultry." It tells how to breed, hatch, feed, grow and market—to make lots of money. EARL M. PETTENGILL :: AMSTERDAM, N. Y.

LUX-OIL • A Dependable Kerosene
For Incubator Use

When Lux-Oil is used

If you ever try it you will use no other. It gives you a good strong flame that stays the same until the last drop is gone—that's why it is dependable. Notice these points:

You don't have to watch your incubator. It produces more heat. It MUST burn with a Uniform Flame. It does not smell or soot.

There's a reason. LUX-OIL IS ALL OIL.

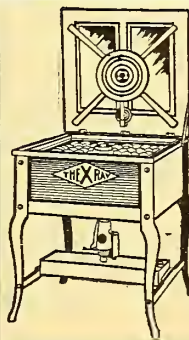

It is specially prepared from Premium Pennsylvania Crude Oil at one refinery; is filtered through 26 feet of fuller's earth; has a gravity of 50; is better than the best kerosene. Put up in 5-gallon sealed cans, packed two to the case. Price \$3.00 per case. Order today.

For Sale by all first class dealers. If your dealer does not handle, order direct.

Marshall Oil Co., Factory and Laboratory, Marshalltown, Ia.
Statio: Lincoln, Neb. Fargo, N.D. Oskaloosa and Mason City, Ia.

When common kerosene is used

Save 2/3 Expense

More than 2/3 saved in oil and time by using the X-Ray Incubator. One filling of lamp makes the entire hatch. Egg tray not removed during the hatch. Glass top, and thermometer in plain sight. Lamp need not be removed during the hatch. Automatic wick trimmer, chimney need not be removed. Flame is turned down automatically when hot enough. Eggs aired and turned by simply lifting the lid. The X-Ray Incubator is entirely different from other incubators. You should know about this before buying. Catalogue free.

THE X-RAY INCUBATOR CO.

21st St., Wayne, Nebraska

MICA-CRYSTAL THE BEST GRIT ON THE MARKET

Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish, as is the case with grit made from white quartz or marble, and unlike limestone grit, or grit of like soluble substances, is not dissolved by the fluids in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit which does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to fowl what teeth are to other members of animal creation. Let us prove the truth of what we say by filling a sample order for you. Manufactured only by

MICA-CRYSTAL COMPANY : : CONCORD, N. H.

Mitchell's Partridge Cochins.

The noted New York Madison Square Garden winners, New York, January, 1907. Cocks 1, 2, 3, 4; hens 1, 2, 3, 4; cockerels 1, 2, 3, 4; pullets 1, 2, 3, 4; pens 1, 2. Breeding and exhibition birds at reasonable prices. Address all correspondence and make all remittances to

ADOLPH E. ANDERSON, Manager : : Bristol, Connecticut

THE DAVIS POULTRY FARM ARCHIE DAVIS PROPRIETOR

Breeder and exhibitor of White Plymouth Rocks, White Holland Turkeys, Emhden Geese and Pekin Ducks. Always win wherever shown. At Illinois State Poultry Show, Macomb, Illinois, January 7th to the 12th, 1907, in strong competition, I won three 1sts, three 2ds and three 3d prizes. Stock for sale at all times. Eggs for sale after Feb. 1st; for prices on eggs please write for circular.

ARCHIE DAVIS, Member of the White P. Rock Club R. R. 1, Tremont, Ill.

Dirk's Buff Wyandottes

At Youngstown, Ohio, Dec. 4th to 7th, we won state cup and silk banner for best cockerel, cock, hen and pullet and best display. All of these birds, also our Toledo and North Baltimore winners will be in our breeding yards this season. A few good breeding cockerels yet for sale. Will book egg orders now.

Address M. E. DIRK - Box 102, North Baltimore, Ohio

SINGLE COMB BROWN LEGHORNS

Non-Excelled Strain. Winnings at two of Iowa's best shows, Iowa State Fair, 1906, 1st cockerel, 1st pullet, 1st pen. At Cedar Rapids Iowa, November 27 to Dec. 1, 1906, 1st cock, 1st hen, 2d pen. Judge Russell pronounced this the best colored Brown Leghorn he had ever handled. Egg circular and mating list free for the asking.

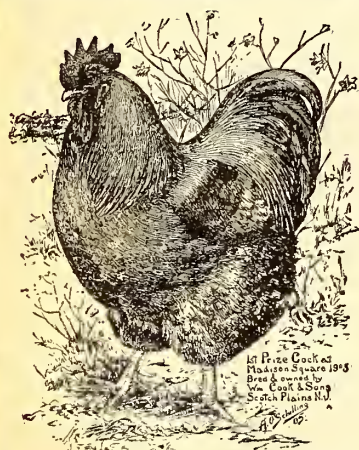

A. E. BANTA, Box 23 - - WHEATLAND, IOWA

Winter Eggs. How To Get Them.

Are you getting any eggs this winter? If not let us show you where the trouble lies. While you are keeping chickens through the winter you may as well make a profit on them. Our method makes them more than pay for their feed in eggs, even when grain is high and green food scarce. Everybody's chickens lay eggs in warm weather. We show you how to get eggs in winter, even from late hatches—and you can prove it at our expense. You know that some fowls lay eggs all winter. If yours don't, why not find out the reason.

Coop poisoned fowls cannot lay eggs at any time, neither can a sick fowl. With our method fowls are kept absolutely free from lice, colds, runp, diarrhoea and cholera. We have something for coop poisoned flocks, too. We show you how to get weight and size in exhibition poultry, and how to raise all little chicks and turkeys that can be hatched. We can help you, but you must write us first. Send a postal card today. We will send you free receipt by next mail.

CHAS. SCHILD CO. - - Box 14, Station C, CLEVELAND, OHIO

Wm. Cook & Sons

(Established 1873)

Originators of all the Orpington Fowls

Box A, Scotch Plains, New Jersey

As usual, we secured another unbeaten show record at Madison Square, 1907, winning twice as many first prizes as any other Orpington breeder. Twenty-one prizes including 10 firsts and six seconds. We have secured 58 first and 41 second prizes in four showings at Madison Square. These facts show we have the best, but that is only natural, as we are their originators. We keep all ten varieties. Send for our illustrated catalogue. Free. Containing full history of the Orpingtons.

EGGS from the finest Orpingtons that exist, and our winners, at \$10 a setting; from grand birds \$5.00 a setting. All eggs guaranteed fertile. Stock for sale. Write requirements.

Inspection of our poultry plants cordially invited. Trains met. Advice free.

Editors and Publishers of the Orpington Poultry Journal

A MAN, A TRADE-MARK AND A BOOK.

The steady growth of a business concern from year to year is conclusive evidence that the goods offered the public have merit. When a poultry supply house begins with an annual business of \$500 and in seventeen years has grown to be the largest concern of its kind in the world, as the Excelsior Wire & Poultry Supply Company, of New York City, has done, two things must be taken for granted: the goods sold are the best to be had, and the management is highly efficient and progressive. Both these features are particularly noticeable in the above concern.

This picture is undoubtedly familiar to some of our readers. William V. Russ, proprietor of the Excelsior Wire & Poultry Supply Company, has been identified with the poultry trade for a long time. It is largely due to his executive ability that the business has grown to such large proportions. Mr. Russ was the first to manufacture concentrated egg food and tonics, which are so widely imitated at the present time.

At the start the company sold the celebrated Prairie State incubators and, although sought by others, still continue to do so today.

We reproduce here the "Banner" trade mark, under which the company's preparations are sold. It is familiar to many of our readers and to them anything we might say in the way of commendation would be superfluous. We strongly advise any who have never used "Banner Supplies" to send for the large and complete 160-page annual catalogue of poultry supplies just published by the company. It is fully indexed so that every article is listed under every possible classification. This makes it a very valuable book for ready reference and one every poultry keeper should have. A copy will be sent if you mention American Poultry Journal.

It is an interesting fact that hardly a steamer leaves the New York port without a shipment of "Excelsior" goods, which are used in almost every foreign country. These shipments include birds and pet stock also.

A splendid assortment of poultry, pigeons, ducks, geese, cats, dogs and other pet stock is always on display at the company's stores (26-28 Vesey street), which have come to be one of the show places of New York City. Any of our readers who visit the metropolis will be well repaid by a visit.

All who have attended the Madison Square Garden Poultry Show, New York City, this year will recall this company's magnificent display of Prairie State incubators and poultry supplies of all kinds. Their exhibit was acknowledged to be the largest and handsomest display at the show.

Free Subscription to The Large Illustrated Paper for Dairymen—The Separator News. A big paper, handsomely illustrated in colors, entirely devoted to the success, prosperity and protection of separator users and intending separator purchasers. Every issue brimful of special illustrations and information—what might be called inside facts—that will help you to decide whether a cream separator will pay you, how large a separator you should have and how to care for a cream separator so as to get the most out of it. Articles guarding you against the "patent can" fraud and against the mistakes of buying a too cheap or a too complicated separator. Articles telling what state experiment stations say of cream separators. Articles comparing different kinds of cream separators. In fact, a whole paper devoted to cream separator news. Would you like to receive every future issue, without a cent of expense to you? Then write the publishers, The Sharples Separator Company, of West Chester, Pa., asking them to put your name on their mailing list. But don't forget to mention that you saw this offer in American Poultry Journal.

At the Central Indiana Fanciers' Association show, held December 17-22, 1906, I. N. Barker & Son, Thorntown, Ind., again made almost a clean sweep on their great prize winning strain of Light Brahmas, winning as follows: First and second cock; first, second and third hens; first, second and third cockerels; second and third pullet; first and second pen; also the American Light Brahma Club special for best cock, hen, cockerel and pen, and a cash special for highest scoring parti-colored pen. This was one of the strongest shows of Brahmas ever seen in the middle west, and competition was close in every class. Pierce, judge.

ROOFING SAMPLES FREE.

Prove by This Offer What Flintcoated
Rubber Fireproof Roofing
Will Stand.

Here is an offer which any one of our readers who has a building to roof and preserve, build or repair will do well to read: The largest mill in the world will send you a sample of their Flint-coated Rubber Fireproof Roofing, delivered prepaid to you, free, if you will simply write a postal to their address below and say you are one of our readers. It will pay you to do this. It will give you a chance to get valuable information about how good roofing—guaranteed roofing—should be made. You can try it for yourself. See what it will stand. You receive a free book on Roofing and also the largest millwork catalogue published. Both will show you how on any roofing, siding, repair work or building which you are going to do now or any other time in the future, you can save, dollar for dollar, half your money on what local dealers would charge you. Write for free sample of roofing, free roofing book and free millwork catalogue today. One postal will bring them all promptly. Address Gordon, Van Tine & Co., Station D57, Davenport, Iowa. Will save you many a dollar.

A \$500 FARM.

Yes, a real farm and house to live in for only \$500; and good, tillable land that produces abundant crops in a section close to large markets.

Perhaps this is not possible anywhere except in "Old Virginia," but it's a sure enough fact there. Not a large farm, of course, but twenty-five acres is enough for one man if he tends it properly.

And the tendency today is to smaller tracts worked "intensively," as they say at the agricultural colleges.

There are thousands of men working today for wages in shops and offices who would be better off to look up this proposition and get to work for themselves; and their families would be infinitely better off.

Nor is it necessary to have the entire amount in hand when purchasing, as easy terms of payment can be arranged to suit the circumstances of each purchaser.

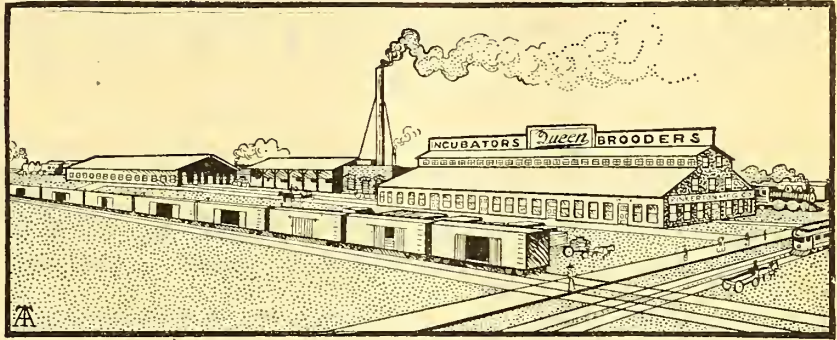

Any of our readers who are interested in this paragraph should write F. H. LaBaume, agricultural and industrial agent

Norfolk & Western railway, Box MT, Roanoke, Va., for the two pamphlets, "Back to the Country" and "What \$500 Will Do in Virginia." They contain full description of these lands, maps, etc., and are gladly mailed to anyone. In writing please mention this paper.

There seems to be a general complaint of poor galvanizing on fence wire. The complaint has become so general as to attract the attention of the United States Department of Agriculture, and they have taken the matter up with the view of investigating conditions and giving practical information from time to time to the fence users. The time was when galvanized fence wire could be relied on to last several years, but now, in many cases, it begins to rust soon after put up. Kitselman

through and through; the machinery is all of the modern, labor saving sort. All visitors speak of the neat appearance of the "Queen" factory, the cheerfulness of the men, their interest in the work, and the bright, shiny, extra heavy copper sheets. The operation causing the most comment is lock seaming the joints, a fine piece of work, showing its great value in making an indestructible copper tank. People are surprised at the absolutely dead air space around the double walls, each wall being lined with heavy asbestos felt.

In the testing room are operated all kinds of incubators to prove that "Queen" incubators run more easily and hatch better than any other. That is why "Queen" incubators and brooders stay sold. The plant is immense in size, main factory, boiler room, lumber yards, sheds and ware-

Brothers, of Muncie, Ind., fence manufacturers, claim to have an improved process of galvanizing wire that adds much to its lasting qualities. They have just issued a 96-page catalogue fully describing the above process. Upon request it will be mailed free to all readers of this paper. We trust all of our friends will write for it. If there are any improvements made we want our readers to know of them.

The above is a picture of the factory of the Pinkerton Manufacturing Company, Lincoln, Neb. A great pleasure of the officers of the "Queen" incubator factory is to escort visitors about the plant. The more incubator factories they have visited, the more enthusiastic visitors are about it. The work is substantial and honest and

houses all connected with the factory by platform convenient for moving of trucks.

Four principal railroads surround the plant, loading and unloading cars at three different doors on their own switch track.

Dr. N. E. Mighell, of Marshalltown, Iowa, won at Iowa state show, Oskaloosa, Iowa, December 24-28, 1906, as follows: Part-ridge Wyandottes, first and third cocks; first, third and fifth cockerels; first pullet; third hen; first pen; best 10. Light Brahmas, first and third cocks; first and second cockerels; first, second and third hens; first, second, third and fifth pullets; first pen; best 10. Columbian Wyandottes, first and second cockerels; first and second hens; first, second and third pullets; first pen; best 10. W. S. Russell, judge.

What a Lucky Man Got Last Year

\$100.00 Cash in American Poultry Journal's
Subscription Contest

CHICAGO, ILL. JUN 27 1906 190 No 7398

THE First National Bank of Chicago

PAY TO THE ORDER OF

S M Yoder \$100 00

One hundred and no 100 DOLLARS

AMERICAN POULTRY JOURNAL PUB. CO.

Per Geo E Oates Pres.

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sells on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize. Wishing you and the Journal success, I remain Very truly yours,
S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

you can get premiums worth another \$100 or more, and you have your choice of 100 different premiums.

All Who Send Us Five Subscriptions

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

GETTING MOST FOR YOUR MONEY.

It is in the art of getting the most for his money that the successful man outdistances his neighbor. It is not brilliancy or a sixth sense; merely the common sense which makes every dollar count for its utmost.

Before you buy an incubator write George Ertel Company, Quincy, Ill., for a copy of the Victor Book. This tells how dollars invested in the hatching machines will pay the greatest dividends. If you want most for your money you ought to get and read it before you buy an incubator or a brooder. They will tell you, too, about their their 100-Egg Hatching Wonder, delivered for \$7.90. This is for the man who wants to start raising chickens in a small way, and they have many testimonials like this:

April, 1906.

In October last I bought of you a 100-egg Hatching Wonder and Brooder, and now give you the results of three hatchings:

No. 1—104 eggs, 9 out on test...95 chicks
No. 2—107 eggs, 12 out on test...95 chicks
No. 3—103 eggs, 7 out on test...96 chicks

Total286 chicks
I do not know what you may think of that, but I think it can't be beat, and the chicks are as lively as little crickets. The machine is truly a wonder.

William Trump,
1533 Lincoln Ave.,
Alameda, Cal.

If you want one machine or several, it will be to your interest to write Ertel before you buy. They can give you most for your money, because they have carefully studied the science of incubation and have worked out their machines to accomplish the results. They build to last, and in every way aim to give the purchaser most for his money. One cent for a postal card will bring you the Victor Book, with its eighty pages of valuable information. Just address "George Ertel Co., Quincy, Ill.

Carver & Avey, Columbia City, Ind., won at Columbia City, Ind., December 13-19, 1906 (James A. Tucker, judge), as follows: Partridge Wyandottes, first, second and third hen; second and third cock; first, second and third pullet, second cockerel; first and second breeding pens; Partridge Wyandotte Club special for best shaped male; special for best shaped female; special for best colored female; special for best breeding pen. This in a class of over 100 Partridge Wyandottes, pronounced by best judges to be the largest and best class of Partridge Wyandottes seen in America outside the St. Louis World's Fair. Silver Pencilled Wyandottes, at same show, first and second cocks; first, second and third hens; first, second and third cockerels; first, second and third pullets; first, second and third pens. Columbian Wyandotte, first on cock.

At Clarinda, Iowa, December 17-21, 1906 (Rhodes, judge), Mrs. Anna M. Lembke, Griswold, Iowa, won first cock, score, 93½; first on pen: first sweepstake on pen, over all Rose and Single Comb R. I. Reds; second and third pullet; third and fourth cockerel. At Iowa Falls, December 17-22, 1906 (Shaner, judge), first on pen; first and fourth cockerel; fourth and fifth pullet.

At the Indiana Central Fanciers' Association show held December 17-22, 1906, I. N. Barker & Son won first and second cock; first, second and third cockerel; first, second and third hen; second and third pullet, and first and second pen, also several specials, on their famous strain of prize winning Light Brahmas.

J. A. Bickerdike, Millersville, Ill., the noted trap nest man, informs us that a patent was granted him December 25, 1906, on his Superior trap nest. Trap nests are now coming into universal use and our readers should write to Mr. Bickerdike for prices and other information, and mention American Poultry Journal.

F. C. Tabor, Worcester, N. Y., won at Johnstown, N. Y., on two entries with his Rose Comb Brown Leghorns—first and third cockerel. J. H. Drevendst, judge. At Piedmont Poultry Show, December 4-7, 1906, on two entries he won first cockerel and second pullet. D. A. Nichols, judge.

Mrs. R. W. Townsend, Salem, Ohio, won at Youngstown, Ohio, December 4-7, 1906, second and third hen; fourth pullet. Salem, Ohio, December 11-15, 1906, second hen; 78 birds in Buff Orpington class. Orr, judge at Youngstown; Rigg, judge at Salem.

50 Choice Pekin Drakes For Sale at \$2.00 Each

All surplus stock in White Wyandottes sold. Egg orders booked now for spring delivery. White Wyandotte Eggs \$3 for fifteen straight. Pekin Duck eggs \$2 per eleven, \$3.50 for twenty-two, fifty for \$5.00

DELVENTHAL'S BUFF ROCKS

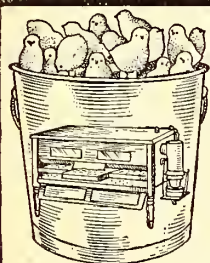

Won at Missouri State Show, including special color male, special shaped female, in one of the strongest classes of Buff Rocks ever shown in the state. They will win for you.

E. L. DELVENTHAL, Care Citizens Bank, Warrenton, Mo.

**KELLER'S WYANDOTTES GOLDENS, SILVERS AND WHITES**

1000 head of the finest birds I ever offered at reasonable prices. If you wish either fine show birds or high grade breeding birds I can supply you. Our birds have won thousands of premiums in the largest shows of America, and more than 200 regular prizes at Madison Square Garden, N. Y. If you wish the best no one is better prepared to supply you in any numbers to suit you. I export more Wyandottes than any other breeder. Also Scotch Collie dogs of the finest. Large circular finely illustrated free.

IRA G. KELLER, Brookside Stock Farm, Box 75, Prospect, O.

The CONTINUOUS HATCHER

Let us send you our free catalog, if in the market for an incubator—As our Continuous Hatcher possesses features that are not found in any other make of incubator. Our customers will convince you that our machine makes good all that is claimed for it in our catalog. It approaches as near as it will be possible to natural incubation. If you do not send for our catalog, you will regret it.

Following report we received from the Mich. Agricul. College. Hacker Incubator Mfg. Co., Agricultural College P. O. Mich. St. Louis, Mo. Sept. 11th 1906.

Gentlemen:—In reply to your request of 24th regarding the Continuous Hatching Machine used here at the college, I would say that the man that ran the machine is now absent from the college, and a more detailed report will be sent you as soon as we can secure it from him. He gave me a verbal report in which he stated that the machine did very good work.

Yours very truly, Jas G. Halpin.

Our 80-page catalogue and 1906 mating list describes the finest line of Poultry Supplies and our fowls, sent free. Ask for it.

GRIGGS BROS., 516 Monroe St., Toledo, Ohio

HOW TO GROW BIG STRAW-BERRIES.

"Great Crops of Strawberries and How to Grow Them" is the title of a handsome book just received. It is published by the R. M. Kellogg Company, the famous growers of thoroughbred pedigree plants of Three Rivers, Mich. The book tells just what and how and when to do everything from the time the plants are set until the berries are marketed, and how to handle the plants to make them produce larger crops the second year than they did the first. It also teaches you how to improve plants by selection. The book is handsomely printed and is a veritable picture book. Everybody interested in strawberry culture, either for market or family use, should have it. Send for a copy of the 1907 edition, but send neither money or stamps, as the book is free to our readers. Address R. M. Kellogg Company, Box 325, Three Rivers, Mich., and tell them you are a reader of American Poultry Journal.

Twenty-one prizes were won by Harmon Bradshaw on his S. C. White Leghorns at the great Thorntown (Ind.) show, December, 1906, as follows: First (Bob III) and second cocks, scores, 95¾, 95¼; first, second and third hen, scores, 96¾, 94½, 93½; first, second and third cockerels, scores, 96¾, 95½, 95¼; first and third pullets, scores, 96¼, 95¼; first pen, score, 192; N. S. C. W. Leghorn special for best cock; N. S. C. W. Leghorn special for best hen; N. S. C. W. Leghorn special for best cockerel; N. S. C. W. Leghorn special for best pullet; N. S. C. W. special for best pen; special for highest scoring birds in Mediterranean class; special for highest scoring birds of solid color; special for highest scoring birds in show; special for highest pen of solid color; special for best shaped S. C. White Leghorn. If you wish something in the way of a S. C. White Leghorn send to Harmon Bradshaw, Lebanon, Ind.

Peter S. Hurt, of Thorntown, Ind., won at Central Indiana Fanciers' Association, Thorntown, Ind., December 17-22, 1906, on his famous prize winning S. C. Buff Leghorns, as follows: First and second cock; second hen; first, second and third cockerel; first, second and third pullet, and first, second and third pens. Also American Buff Leghorn Club specials for best cock, best hen, best cockerel and best pullet; also special for ten highest scoring females in show, special for best display, sweepstakes for best S. C. Buff Leghorn in show, and six other specials. W. C. Pierce, judge.

The M. M. Johnson Company, of Clay Center, Neb., in appreciation of the business which the poultry fanciers and poultry raisers of the state of Nebraska have given him in the past, rented the Auditorium at Lincoln, Neb., for the weeks January 4 to 19, 1907, and donated its use to the Nebraska State Poultry Association for the annual association's show. This was an act of courtesy which will be appreciated by every poultry raiser of Nebraska and shows that Mr. Johnson does not do things in a small way.

Miss Alice M. Hedges, Pana, Ill., won at Central Illinois Poultry and Pet Stock Association, Effingham, Ill., December 17-21, 1906, as follows: First cock, first cockerel, first hen, first pullet, first pen, second and third pullet. Also received all the White Plymouth Rock Club specials. On White Holland turkeys she won first on young tom, first pullet and second pullet. O. L. McCord, judge. Thirty-one in White Plymouth Rock class.

We have received the 1907 catalogue for L. L. Olds Seed Company, Clinton, Wis. These people are this year especially well prepared to look after farmers' needs in all lines of seeds and every reader of American Poultry Journal should send for copy of this catalogue. Ask them for some of the free samples of seeds that they are sending.

George A. Barrows, Groton, N. Y., won at the Madison Square show, January 1-5, 1907, on S. C. White Leghorns, fifth hen and club cash special; also silver cup given to the member winning the most points who never before won at Madison Square Garden.

R. A. Bloomfield, of Mt. Sterling, Ill., won at Illinois State Fair, Springfield, Ill., September 28 to October 5, 1906, as follows: Second cockerel, third pen, on S. C. Rhode Island Reds. D. T. Heimlich, judge.

William Ellery Bright, Grove Hill Poultry Yards, Waltham, Mass., won at Madison Square Garden, New York, January 15, 1907, as follows: First, third and fourth cock; fifth hen; first, fourth and fifth cockerel; first yard mated to produce exhibition females; cup for best cock, hen, cockerel and pullet; champion male; best colored male; best three cockerels, on Barred Plymouth Rocks, 283 in class. Henry Schwab, judge. First, second and third cock; first and third hen; first and fifth cockerels; first yard, on S. C. Brown Leghorns. George Burgott, judge. Eighty-three in class.

Simon Beuth, of German Valley, Ill., won at the Illinois state show, held at Macomb, Ill., January 7-12, 1907, as follows: First and second hen, third and fourth cock, second cockerel tied for first, fifth pullet, third pen, and best shaped hen. This was the largest class of Buff Wyandottes ever exhibited at the Illinois state show, 105 in class. Pierce, judge.

Paul T. Hobart, of Roscoe, Ill., has won his share of the blue ribbons this winter, and is offering about fifty cockerels at prices that are way down. All those desiring Brown Leghorns that make it a business to lay should write for prices before ordering elsewhere. Mention American Poultry Journal.

George J. Gleason, of Dunlap, Iowa, won at Boyer Valley Poultry Association, Dunlap, Iowa, December 26-29, 1906, as follows: First, second and third pullets; second cockerel; third cock and third hen; second pen, and two special sweepstakes, on Silver Wyandottes. George D. Holden, judge.

R. A. Bloomfield, of Mt. Sterling, Ill., won at Western Illinois Poultry Association, Mt. Sterling, Ill., December 4-7, 1906, as follows: First cock; first hen; first, second and third cockerel; first, second and third pullet; first pen, on S. C. Rhode Island Reds. Ben S. Myers, judge.

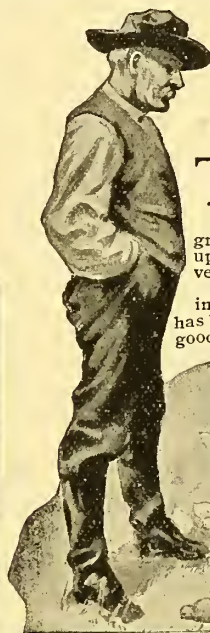

Bonnie Brae Poultry Farm, New Rochelle, N. Y., won at Madison Square Garden, New York city, January 1 to 5, 1907, as follows: Rose Comb White Leghorns—third cock, third hen, third cockerel, fifth pullet, third pen; Pekin ducks—fourth duck, fifth drake, second pen.

A. A. Lee, of Painesville, Ohio, won at Painesville Poultry and Pet Stock Association, Painesville, Ohio, January 9-14, 1907, as follows: First and second pullet, first, second and third cockerel; first and second breeding pens. D. J. Lambert, judge; 34 in S. C. Buff Orpington class.

W. L. Fern, of Elgin, Ill., won at Elgin Poultry Association, Elgin, Ill., January 1-5, 1907, as follows: first cock, second cockerel, first hen and first pen and special for highest scoring solid colored pen, on S. C. White Leghorns. F. H. Shellabarger, judge.

A. A. Lee, of Painesville, Ohio, won at Geneva Fanciers' Association, Geneva, Ohio, December 18-22, 1906, as follows: First cockerel, first hen, first, second and third pullet; first breeding pen, on S. C. Buff Orpingtons. Ira C. Keller, judge.

I. N. Barker & Son, Box A, Thorntown, Ind., have just issued their 1907 Light Brahma catalogue and will gladly mail it to you free if you will ask for it.

Facing the Growing Season

Here you are, face to face with the Growing Season.

What will the Harvest be?

This is a mighty important question, just now.

THE SUCCESS of the poultryman depends upon the successful development of the chicks. Therefore, at this season of the year the subject of raising chicks is of vital interest and importance to every poultry raiser.

It isn't so hard to hatch the chicks—the modern incubator has greatly simplified that part of the work. Indeed, it can be depended upon to hatch good chicks and plenty of them, but the growth and development of those chicks depends on the brooder.

Strange, as it may be, much time has been spent on perfecting the incubator, while the brooder has long been neglected, and what time has been spent on brooder systems has brought little improvement. Most good brooders have been built well and plenty large, but their brooding plan is grossly artificial and as different from nature's as day is different than night. It seems odd that men, so well acquainted with nature that they could build incubators that successfully take the place of the old hen, would fail so utterly in the making of a brooder.

However, one point seems to have been lost sight of. A brooder to succeed must brood as nature does—Nature's principles must be embodied in its construction. Nature's method is for the chicks to get their warmth by coming in contact with the warm body of the mother hen. *This is the principle* that is incorporated in the Root Brooder, and for this reason the "Root" is a brooder success. It broods the chicks just as nature does. The picture in the corner tells the story. It shows how chicks live and thrive in the "Root."

There is a big difference in brooders. Every poultryman knows that just any brooder isn't a good one—the chicks show it. Poor machines selling for less than the "Root" cost a great deal more in the end, because they cannot raise so many chicks—they are not constructed on lines that save money like the "Root" machines. All has been done that brains, mechanical skill and competent workmen can do to make the "Root" a perfect brooder. Our experiments have been going on for nine years—not a day now and then—but all the time, under all conditions. When we started out to make the "Root" we said that it must be right before we would place it on the market. It is ready now with our guarantee. We want you to

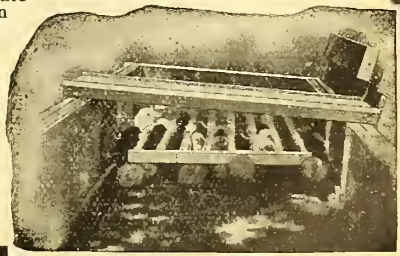

TRY THE ROOT-BROODER AT OUR RISK

Try it right on your own plant, with your own work, in your own way. Test it in any way you like, in the coldest weather, and if you don't find that the Root Brooder will raise more and better chicks than any other brooder can, send it back at our expense, and your money will be refunded in full. Surely this is an offer so fair and broad that even if you had made it yourself you could not have made it fairer. Why lose good nature, good energy and good money this spring because of faulty, inadequate brooders? Why run risks and take chances when you don't have to? Why not write us to-day for our circular which tells all about the Root Brooder. We will gladly send you all our literature free.

Root Brooders are shipped, freight prepaid, direct from the factory.

"DUKE OF KENT" STRAIN of S. C. Black Orpingtons. No strain of Black Orpingtons in the world stands higher. Season, 1907. There isn't a state in the Union where, in the shows of the present winter, a splendid list of first prizes have not been carried off by cockerels and pullets hatched from eggs shipped from my yards last year. One customer writes: "I got three cockerels out of the setting, and this week, in hot company, I took first, second and third prizes at our big show. The judge said the first prize bird was the best Orpington he had ever handled." Eggs now ready; \$4 for 13; \$7.50 for 26. You cannot get any higher grade eggs, even at \$10 per setting. Last year I could not supply half my orders. Fifty prize winning cockerels for sale at \$10; others cheaper. Write postal for chromo of "Duke of Kent." Sent free. D. N. Foster, Ft. Wayne, Ind. State Vice President of American Orpington Club 2-4

Olentangy Poultry Yards - Charles C. Reid, Mgr. - Delaware, Ohio

"RINGLET" BARRED PLY. ROCKS

IN THEIR PURITY. At the big Wisconsin State Show, January, 1906, our birds made a clean sweep, a record positively unapproached by any other breeder east or west. We have a grand lot of breeders, exhibition pullets, cockerels, yearling cocks and pullet-bred chicks, positively fine. We will sell you as good a bird for \$10 as you can buy elsewhere for \$20.00. Other priced birds in the same proportion.

SPECIAL: We have mated up for the season ten grand yards to produce our exhibition cockerels and pullets. We can truthfully say there is not a breeder in the country who has a finer and more healthful lot of birds in their yards, and but few have their equal, although some have the nerve to charge as high as \$10 per 15 eggs. Our yards are headed by and composed of our big string of prize winners at the state show, 1906, and the cream of our flock, the 500 birds raised last season. We will sell our very best eggs at \$4 per 15, \$7 per 30, and \$10 per 45. Sincerely yours,

KING BROS.

:: ::

OSHKOSH, WIS.

The Celebrated Knox-All Strain WHITE WYANDOTTES

That have never been beaten in the show room—look up my show record. I have fifteen pens of grand exhibition stock mated for best results, with trap nest records. Eggs \$3 per 15, \$5 per 30. Incubator eggs from the same matings \$10 per 100. Write for mating list.

What a Lucky Man Got Last Year

\$100.00 Cash in American Poultry Journal's
Subscription Contest

(CHICAGO, ILL. JUN 27 1906 190 No 7398)

THE First National Bank of Chicago

PAY TO THE ORDER OF

S M Yoder \$100 00

One hundred and no 00 DOLLARS

AMERICAN POULTRY JOURNAL PUB. CO.

Geo E Oates Pres.

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sells on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize, Wishing you and the Journal success, I remain—
Very truly yours,
S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

you can get premiums worth another \$100 or more, and you have your choice of 100 different premiums.

All Who Send Us Five Subscriptions

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production. Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per sitting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG

IOWA FALLS, IOWA

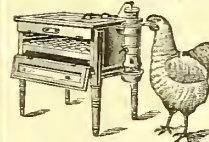

START A BUSINESS OF YOUR OWN

The only way to start a business is to scratch right around and start it. Make a business for yourself by raising poultry. You can start without even the semblance of a chick on the premises and in a few weeks have the place swarming with them. Raising broilers for early market is one of the most profitable sources of revenue for the poultryman. Even if you have only a small patch of ground you can add to your income. Some have made an excellent start by hatching their first crop in the cellar during the cold months of February and March.

THE

Wooden Hen

\$12.80

and a setting of 200 eggs will start you, and the first hatch will pay all expenses if sold for broilers, or will form the basis of a large poultry farm. The Wooden Hen is the best known low-priced incubator on the market, and is guaranteed to hatch every fertile egg. This hatcher will put you in the way of making money in poultry raising, either as a side line or as a permanent business. The Wooden Hen is the peer of any hatcher at the price, and is better than dozens of high priced incubators.

It Will Hatch Every Fertile Egg

Begin to-day by writing for free catalogue and full information regarding the growing of incubator chicks for market.

CEO. H. STAHL, Quincy, Ill.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

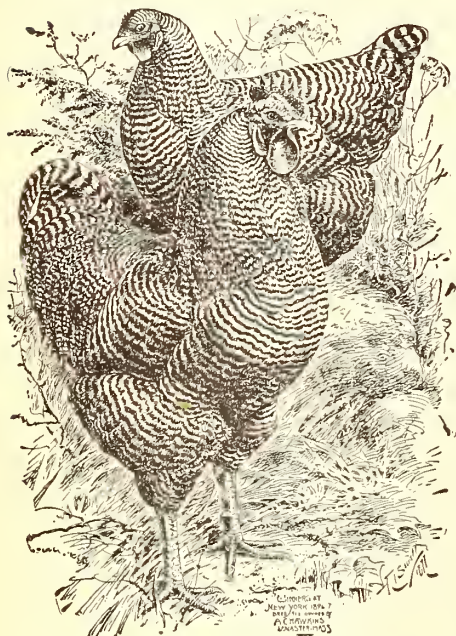

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

My birds are bred close to Standard and have been carefully mated. Eggs carefully packed and a fair per cent of fertility guaranteed.

C. H. COLEMAN - **LOGAN, IOWA**

Every Hatch a Success

That's the record of the Ranney Incubator. That's the only kind of results to pay money for. Experiments with different incubators are costly and waste time. You want the best all around incubator—the one that hatches out the most chicks—then you want

THE RANNEY INCUBATOR

Mr. Paul G. Craver, Bellefontaine, O., had a 100 per cent hatch; Mrs. C. D. McPeake, Bay City, Mich., 97½ per cent; Mr. J. F. Boes, Bay City, 93 per cent, and we could name many others.

We give the strongest possible guarantee that is honest. But the best point about that guarantee is that it is never needed. The Ranney is the modern incubator—right up to date, with the late improvements. Combines every good feature of other machines with many exclusively its own. The Ranney Regulator controls the heat in the egg chamber within the fraction of a degree—the sensitive thermostat is protected from direct rays of heat. The fresh air inlet is at the base, well away from the lamp—no fumes of oil or overheated air. The hot air chamber is entirely separated from the egg chamber—radiates warmth downward on the eggs (Nature's method.) The Ranney is the only machine that has adjustable ventilation without impeding the outflow of foul air. Our Patent Adjustable Ventilator makes the Ranney equally successful in high altitudes or low—dry climate or moist. Handsome mahogany finish case that lasts for years.

Made in eight sizes, from 50 to 1200 egg capacity. Brooders and Poultry Supplies of all kinds. Our new catalog is awaiting your request; it is sent free, postage paid.

FREE—Valuable 48-page book "Poultry Diseases and Useful Information." (Usually sells for 25c). Send 2c stamp for postage.

Washington, N. J.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

BEST HATCHER

CYPHERS INCUBATORS AND BROODERS

Again This Year Proved Their
Worth By Hatching and Brooding

Winners at New York, Boston, Chicago, 1907

YOU KNOW that to win at these—The Biggest Shows on the Continent, Chicks must be Hatched Right—Big, Happy and Healthful. *Read the following letters just received.*

YOU KNOW that a puny little chick when hatched is handicapped in the race for growth and perfection, and can never catch up. *Read the following letters just received.*

YOU KNOW it is just the same with Layers—The Best Layers must be hatched "Hale and Hearty." Just the same with Market Fowl—For Quick Growth the Chick Must be Hatched Right—as Nature Demands. *Read the following letters just received.*

YOU KNOW there can be but one "Best Machine" that will do this. That one Acknowledged to be Best Machine is the Standard Cyphers Incubator—so these letters say. It is

Most Simple to Operate,

Patented, Self-Regulating, Non-Moisture and Self-Ventilating.

It is Guaranteed to Hatch More and Stronger Chicks Than Any Other.

THIS ANSWERS THE QUESTION—"WHICH INCUBATOR SHALL I BUY?"

"A Great Percentage of My First Birds."

Berlin, Conn., Feb. 9th, 1907.
NEW YORK WINNERS—"A great percentage of my best birds this year was hatched in Cyphers Incubators. I am not positive about all my winners, and therefore only will include those that I absolutely know. They are as follows: The 2nd S. C. Buff Cockerel, also the Buff Cockerel at the head of the Third Pen, and several Pullets in Third Pen; also my 5th S. C. Black Cockerel were all Hatched in Cyphers Incubators."

WILLOW BROOK FARM,
W. L. Davis, Prop.

"And Raised in Cyphers Brooders."

Ossining, N. Y., Jan. 29th, 1907.
NEW YORK WINNERS—"Our First Prize White Wyandotte Cockerel at Madison Square Garden show, January 1-5, also the Pullets in our Second Prize pen of White Wyandottes; the Pullets in our Fifth pen of Plymouth Rocks; our 1st, 2nd and 3rd Cockerels and 1st, 2nd and 3rd Pullets and all birds in our Second Prize pen of Silver Pencilled Plymouth Rocks were Hatched in Standard Cyphers Incubators and raised in Cyphers Brooders."

ROCK HILL POULTRY FARM,
F. W. Corey, Manager.

"And Reared on Cyphers Chick Food."

Stratford, Conn., Jan. 28th, 1907.
NEW YORK WINNERS—"The Pullets in my First Prize Pen of Barred Plymouth Rocks at Madison Square Garden, January 1-5, 1907; also the Second Prize Cockerel at same exhibition were Hatched in my Cyphers Incubator and were Reared on Cyphers Chick Food. This pen of Barred Plymouth Rocks was the winner not only of the Association Prize, but also of Six Special, including Two Silver Cups and 'The Old Temple Japanese Art Vase' offered by the Japanese Government for the best pen of Barred Plymouth Rocks in the Show."

C. H. WELLES.

"As Well as for the Egg Basket."

South Framingham, Mass., Feb. 5th, 1907.
NEW YORK WINNERS—"It gives me real pleasure to tell you that the Cyphers Machine Hatches Winners for the Shows as well as for the Egg Basket. My 1st Hen and 4th Cock at Madison Square Garden were both Hatched in Cyphers Incubators; the hen, as you know, being one of the sensations of the exhibit."

ARTHUR H. DUSTON.

"Dispels the Old-Fashioned Theory."

Ridgewood, N. J., Feb. 7th, 1907.
NEW YORK WINNERS—"All my prize winners—I won 1st, 2nd and 5th Cock; 1st and 3rd Hen; 3rd Cockerel; 1st and 3rd Pullet; 2nd Exhibition Pen; ALL Specials, and the N. S. C. W. Leghorn Cup at the Great New York Poultry Show this year—were Hatched in Cyphers Incubators."

"This dispels the old-fashioned theory that chicks hatched in incubators are not as good as those hatched in the natural way. I have sold this year hundreds of cockerels and pullets that were hatched in your machines, and reports indicate that birds have won a great many First and Second prizes in the principal poultry shows in nearly every State in the Union."

D. W. YOUNG.

"Wins in One, Two, Three Order."

Bristol, Conn., Jan. 28th, 1907.
NEW YORK WINNERS—"All my winners in young stock (Partridge Cochins) at Madison Square Garden Show, this month, were Hatched in Cyphers Incubators. These winnings embraced the following: 1st, 2nd, 3rd and 4th Cockerels, and 1st, 2nd, 3rd and 4th on White Cochins Cockerels, and 1st, 2nd, 3rd and 4th on White Cochins Pullets; and five of my eight winners were Hatched in Standard Cyphers Incubators."

GEO. W. MITCHELL.

(Mr. Mitchell writes that he hatched 100 per cent twice. Every Fertile Egg in the Machine each time. See letter in our catalogue.)

"Sold Many High Priced Winners."

Raceville, N. Y., Feb. 6th, 1907.
BOSTON AND NEW YORK WINNERS—"I do not personally exhibit my S. C. Black Minorcas, but I have sold a great many winners at from \$25 to \$100 each which were Hatched in Cyphers Incubators. My own winnings on Rose Comb Black Minorcas which were Hatched in the Cyphers Machine, are—1st, 2nd and 3rd Hen; 2nd and 4th Cockerel; 2nd Pullet, and three of the birds in my 1st Prize Breeding Pen at Madison Square Garden; also my 1st, 2nd and 3rd Hen; 1st Cockerel; and the Cockerel which headed my 1st Prize Breeding Pen at Boston, January, 1907. Two of the cocks which won at Boston were not shown at New York. The R. C. Black Minorca Cock which I have recently sold to Lloyd Mishler, North Manchester, Ind., won 1st at Madison Square Garden and 1st at Boston in 1906 as Cockerel. This Cock was also Hatched in a Cyphers machine."

GEO. H. NORTHUP.

"Annually Hatch First Prize Winners."

Hartford, Conn., Feb. 5th, 1907.
BOSTON AND NEW YORK WINNERS—"It gives me pleasure to advise you my 1st and Champion White Wyandotte Pullet at New York Show, January 1-5, 1907, was Hatched in your Incubator, as was also my First Prize S. C. White Leghorn Cockerel at New York; also winning 1st and Specials at Boston two weeks later; also two of the Pullets in my First Prize Pen S. C. White Leghorns at same exhibit. I have used your machines since they were first put on the market and Annually Hatch Many First Prize Winners for my patrons as well as myself."
 F. O. GROESBECK,
 Prop. Elm Poultry Yards.

"The Best of the Prizes."

Hartford, Conn., Jan. 28th, 1907.
BOSTON WINNERS—"In looking over my records, I find that the 1st and 2nd Prize Rose Comb Rhode Island Red Cockerels at the Boston show, January 15-19, 1907; also the First Prize Pullet were Hatched in a Cyphers Incubator."
 ROBERT C. TUTTLE.

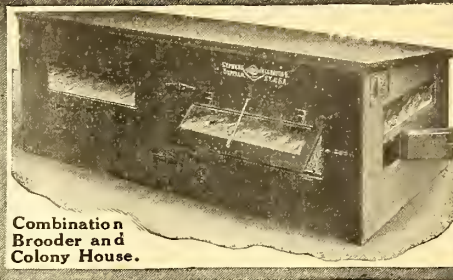

Hatched Prize Winners Several Years.

Yorkville, Ill., Feb. 2nd, 1907.
CHICAGO WINNERS—"Fully Fifty Per cent of all the Prize Winning Barred Plymouth Rocks we produce each year are hatched in our Cyphers Incubator. At the late Chicago show, in a large and strong class, we won on Barred Plymouth Rocks—1st, 3rd Pullets; 1st Exhibition Pen; 2nd Hen; 5th Cock. I have used your machine several years for hatching prize winning Barred Plymouth Rocks. The best proof of my belief in the quality of chicks hatched by your machine, is to be found in the fact that I am going to buy another 120-egg size for this season's use."
 D. F. PALMER.

Here's a String of Winners.

North Adams, Mich., Feb. 4th, 1907.
CHICAGO WINNERS—"Our prize winning Orpingtons of Every Variety at the great Chicago show, January 23-30, 1907, were Hatched in our Standard Cyphers Incubators, as follows: Single Comb Buff Orpingtons, 1st, 2nd Cocks; 2nd, 3rd Hens; 2nd, 3rd Cockerels; 2nd, 3rd Pullets; 1st Pen. Rose Comb Buff Orpingtons—1st Cock; 1st, 2nd Hens; 1st, 2nd Cockerels; 1st, 2nd Pullets; 1st Pen. Single Comb White Orpingtons—1st Cock; 2nd, 3rd and 4th Hens; 1st, 2nd and 4th Cockerels and 2nd and 5th Pullets. Rose Comb White Orpingtons: 1st, 2nd Cocks; 1st, 2nd and 3rd Hens; 1st, 3rd Cockerels; 1st, 3rd Pullets; 1st Pen. Single Comb Black Orpingtons—1st Hen; 4th Cockerel; 2nd, 3rd Pullets."

Best for Fancier and Market Poultrymen.

Washington, Ill., Feb. 4th, 1907.
CHICAGO WINNERS—"You will perhaps be pleased to learn that in the Barred Plymouth Rock class 3rd Cock, two of the Pullets shown in the Open Class, two of those in the 2nd Pen, and two of those in the 3rd Pen at Chicago, 1907, were Hatched in a Cyphers Incubator. I still consider the Cyphers the best machine on the market and the one for the fancier as well as the market poultryman."
 O. P. BENNETT.

One of Them a \$200 bird.

Hazelrigg, Ind., Jan. 30, 1907.
CHICAGO WINNERS—"My First Prize Single Comb Buff Orpington Cockerel and Third Prize Single Comb Black Orpington Cock at Chicago Show, January 23-30, 1907, were Hatched in my Cyphers Incubator. I regard my first prize Buff Orpington Cockerel as the best bird of the kind exhibited thus far in the entire west. At Chicago, during show week, I priced him at \$200 and refused to take less money for him."
 C. S. BYERS.

Both This Year and Last Year,

Waverly, Ill., Feb. 5th, 1907.
CHICAGO WINNERS—"The following Black Langshans exhibited by me at the Chicago show, January 23-30, 1907, were Hatched in my 360-egg Standard Cyphers Incubator: 2nd and 3rd Cockerels; 2nd and 3rd Hens; 3rd and 4th Cocks; 2nd Pullet, and four out of the five birds in my First Prize Exhibition Pen. Every Cockerel and Pullet on which I won prizes at this show last year were also Hatched in my Cyphers Incubator, as follows: 1st, 2nd, 3rd and 4th Cockerels; 1st, 2nd, 3rd and 4th Pullets."
 JESSE T. BATEMAN.

The Reason Why Cyphers Poultry Foods are so Generally used by Leading Poultrymen is because they Give Value for Value and are Unequalled in Results. This is shown by the large number of Exhibitors who Use Nothing but Cyphers Foods and Consequently win at the Big Shows. It is easy to realize Why, when you know that we are so careful to have our Foods delivered to the customer unadulterated that we put them up in Sealed Bags and advise customers to refuse them if the Seal is Broken. WE GUARANTEE that no Screenings or Weed Seeds are used in our Foods. Nothing but Health-giving, Strengthening, Pure Grains Scientifically Balanced by our experts to Form Flesh and Feather. Sold by 2,500 Dealers and at all our Branches. Ask for it and accept no other. Compare it (the Food in the Sacks—Not Small Samples) with other Foods and judge of its Value.

LITTLE GEM HATCHERIES cost only 30c. each. System is perfect. Thousands of poultry-raisers are hatching 400 to 1,800 chicks in them yearly. These four ladies have used them five years, hatching and raising over 1,000 chicks a year each. Instructive booklet free.

F. GRUNDY, Poultry Expert, Morrisonville, Ill.

Sure Hatch Book Offer!

TO CELEBRATE the biggest year in the history of this company, we printed the great **Sure Hatch Book** for **free distribution**. It is not merely a catalogue, but a Complete Guide to Poultry Raising. Has 102 solid pages. Easily worth \$1.00 a copy. We worked on this big book for months to make it the best thing of the kind ever issued. We put into it the results of twenty years of study and experiment—all the wealth of information gained in building up the largest incubator and brooder business on earth. We reproduced photographs from almost every state in the Union, with which to illustrate it. We put in plans for all kinds of poultry houses.

**It's Packed Full of Facts**

The **Sure Hatch Book** exceeds the expectations of those who have sent for it. It's crowded full of live information. It's right up to today. Tells facts, not theories. Shows you how to get the most money out of chicken raising in the **quickest time**. Covers the ground **thoroughly**. We gave the same energy, thought and experience to the work of getting out the **Sure Hatch Book** that we do to the making of the

Sure Hatch Incubator

which holds the **world's record** for highest hatching average and lowest selling prices. It actually **runs itself**! Pays for itself with one hatch and a profit on top of that. Our Brooders are as successful in raising chicks as our Incubators are in hatching them. Every **Sure Hatch** **guaranteed for five years** and built to work for a **lifetime**. The **Sure Hatch** **does the work** and does it **best**. That's what sells **Sure Hatches**. Over 110,000 of them are now in use.

We put it down right here in **black and white**, that if the **Sure Hatch** doesn't "**make good**" for you, we take it back at our expense. We pay freight.

Write at once for your copy of the **Sure Hatch Book** and we will send it **FREE**, postpaid.

Sure Hatch Incubator Company

Box 6, Fremont, Neb. or Dept. 6, Indianapolis, Ind.

NOTE.—July 1, 1906, our Main Office and Factory were removed from Clay Center to Fremont, Neb.

South Side Poultry Farm is the home of the celebrated **PURITY STRAIN**

S. C. W. LEGHORNS

one of the greatest laying and winning strains on earth, as we can prove by records. This strain has won in a number of the best shows in the hands of my customers. Pullets from **Purity Strain** in the hands of my customers have been placed side by side with some of the most noted strains, and beat them every time. Stock of both sexes for sale at all times. Satisfaction positively guaranteed. Eggs, after Feb. 1st.: \$2.50 to \$3 per 15; \$8 per 100.

JOS. A. BURKHART

Box 55, SMITHSBURG, MD.

Arnold's Columbian Wyandottes

Have repeated their record of 1906 at the Madison Square Garden Show of 1907, and won more regular and special prizes than any of our competitors. In a class of 155 of the best Columbian Wyandottes ever seen at one show, and exhibited by 22 of the leading breeders of the East, we won the Club's Championship Cup for best collection, President's Cup for best cock, hen, cockerel and pullet, President's Cup for male with best hackle, President's Cup for female with best wing, special for 4 best cocks, special for 4 best hens, also winning two out of five firsts. A fine lot of birds for sale at right prices. Eggs from the best matings we ever had, \$10 and \$5 per 15. Be wise and order early.

AUG. D. ARNOLD

Box 777, DILLSBURG, PA.

These People Make Poultry Pay

Mary Harrington

Campbellsport, Wis., Jan. 9, 1906.
I had all kinds of luck with my Racine incubator and brooder with ducks last year; from 90 eggs the incubator hatched 82 fine, strong ducklings.

MARY HARRINGTON.

Strandburg, S. D., May 2, 1906.

In my first trial in the 120-egg Racine incubator I got 102 fine chicks from 107 eggs set. I think I did well for one who had never run an incubator before.

P. O. JOHNSON.

Princeton, Me., Apr. 27, 1906.

In my first hatch in the 120-egg Racine incubator I got 81 fine, healthy chicks, and at three weeks old there are 80 left in the brooder.

J. HAMMAN.

Gate, Okla., Mar. 3, 1906.

The first hatch in my 225-egg Racine incubator was splendid, as I got a 97 per cent hatch, and the chicks are all doing fine in the indoor brooder. I had never seen an incubator before.

A. H. JUSTUS.

Walton, N. Y., Mar. 24, 1906.

My first hatch in the 225-egg Racine incubator was 82 per cent. I am well satisfied.

REUBEN HOWLAND.

Big Lake, Minn., Apr. 2, 1906.

I have been in the chicken business in a small way for 10 years, but on the by-gone old time way with hens. Last year I purchased one of your 225-egg Racine incubators and two brooders, and find them far superior to the old way, and the work is both pleasant and profitable.

G. W. CANFIELD.

Potwin, Kans., Mar. 17, 1906.

Have just taken off a hatch of 90 chicks from 93 eggs in the 120-egg Racine incubator. The regulator works to perfection. No sitting up with this machine as some of our neighbors must do with other makes of incubators.

JAS. SNAVELY.

Hanna City, Ill., May 31, 1906.

My second hatch in the 120-egg Racine incubator is just off with 97 strong, healthy chicks.

LULU M. MCGARROH.

T. W. Barnett

J. A. Carter

Minden City, Mich., Nov. 15, 1906.

The 120-egg Racine incubator I purchased in 1903, is still working fine. My two hatches this season were 81 per cent and 84 per cent.

MRS. JOHN HIGGINS.

Indianola, Nebr., Mar. 3, 1906.

I bought a 200-egg Racine incubator and brooder three years ago. It was an A No. 1 investment. I have just taken off a hatch of 150 chicks, which I think good for winter hatching.

J. A. CARTER.

Holder, Fla., Apr. 22, 1906.

Out of 98 eggs in my first trial in the Racine incubator it hatched 82 chicks. I am well pleased with it, and the Racine outdoor brooder. Those wanting first class incubators and brooders ought to buy the Racine.

T. W. BARNETT.

Hopkins, Mich., Jan. 9, 1906.

I had such good success with my 225-egg Racine incubator, also the indoor and outdoor brooder purchased last year, that I now want another Racine outdoor brooder.

MRS. JOHN MCBRIDE.

Walpack Center, N. J., Apr. 3, 1906.

My first hatch, for this season, in the 120-egg Racine incubator was 106 chicks. That goes ahead of any other incubator around here.

MRS. DAYTON COLE.

Barkley, N. C., Mar. 5, 1906.

I have made four hatches in my 120-egg Racine incubator and hatched 409 chicks. The chicks all did fine in the two 100-chick outdoor brooders. There are a number of different incubators and brooders used here, but none give satisfaction like the Racine.

EARL C. SEAGLE.

Cedar Grove, Wis., May 13, 1906.

My first hatch in the 225-egg Racine incubator was 180 chicks from 196 eggs. In the 120-egg Racine I got 109 chicks from 111 eggs. Then I put seven \$5.00 settings of White Plymouth Rock eggs in the 120-egg size; 82 were fertile, and hatched 77. There was not a cripple in the bunch.

JOHN FEYEREISEN.

Mrs. John McBride

Mrs. Dayton Cole

Earl C. Seagle

John Feyereisen

You Can Make Poultry Pay

First of all, get the best book ever written on Incubators. No matter what other makers you write for a catalogue—write us, too. We will send you the best book of all—written by the man who knows most about incubators.

The book is our catalogue—that is why we send it free. But it is more than a catalogue. It tells all that an Incubator should be, and why.

It is so clear that you will understand the subject as well as the man who wrote it. It is interesting—fascinating. You will read it from beginning to end.

The man who wrote the book has spent 25 years in perfecting Racine Incubators and Brooders. He tells of the first machine he made—in 1881—and the mistakes in it. He tells how he tested one machine after another in his own hatchery. How he gradually learned ways to better them.

He tells of tests he has made with all other good machines—of their good points and their weaknesses. Yet he is courteous and fair. He condemns no machine that is honest.

He tells you points to look out for—what claims are unfounded, and why. He tells it in such a way that you know he is right. His book is a complete education on incubators. When you read it you will be a good judge of your needs, and able to avoid a mistake.

The writer of this book is the maker of Racine incubators and Brooders. He has made these remarkable machines the perfect affairs that they are.

The book will describe them to you. It will tell how he developed them, hatched with them, watched them and improved them, month after month, for 25 years.

No man or woman can read this book without wanting the Racine Incubator. You will choose the machine made by the man who knows so much about them.

That fact, above all, is the reason why you should read it. The Racine is, by twice over, the best Incubator yet made. It is the machine that needs the least attention—that regulates itself. It is guaranteed to produce larger average hatches than any other incubator. It is sent on trial to those who wish it, and is sold under warrant to everybody.

The Racine will cost you less than any other machine you would care to buy, and we prepay the freight on it anywhere.

But first get the book. Write for it now before you forget it, and before the books are gone. It will tell you all about hatching chicks, and how to make an incubator pay.

Nature's Way Helped

J.F. SIEMS.

Natural Hen INCUBATOR

Only \$3.00 for 200 egg size. The heat of the Hen is sufficient and it will hatch every fertile egg. You will get strong, vigorous, not hot house chicks.

Send today for our catalogue and learn what thousands of others are doing in the way of successful chick rearing. Agents Wanted.

Natural Hen Incubator Co., 8-4, Columbus, Nebraska.

LOOK FOR THE FLAG

When you buy a thermometer. No matter what kind of an incubator you have, to get the largest possible hatch, the eggs must be kept at the right temperature 103°. An absolutely accurate thermometer is vital. They won't stay accurate unless seasoned, which adds considerably to the cost.

Taylor Thermometers

are as accurate as thorough seasoning and careful testing and re-testing can make them. The white graduation on the black frame makes reading easy even in a dim light. An arrow emphasizes the 103°. Send 75c. for a Taylor Incubator Thermometer (prepaid). The saving on fertile eggs will pay for it over and over.

Taylor Brothers Company,
 Rochester, N. Y.

DO YOUR CHICKENS FLY OVER THE FENCE?

Neher's Wing-Hobble is a positive preventive. Your birds absolutely can fly no higher than they can jump. The most unique and novel device ever invented. You can't afford to be without them. Send today for sample; 10 cts. silver. Name size wanted. \$1.00 per dozen, prepaid.

Bradley Incubator

SOOT-PROOF · SMOKE-PROOF · DAMP-PROOF

Three Essentials

that help to account for the big Bradley hatches. Even if the lamp should smoke, it cannot reach the egg chamber. The heater can be made fresh and clean every hatch, no chance for soot accumulations to cause smoke and death dealing fumes. Hatcher can be taken apart, cleaned and put together again in five minutes. Superior lining and packing between walls gives the Bradley the most perfectly protected chamber of any incubator on the market.

Regulation So Perfect it Will Run Night After Night Without Varying a Single Degree From 103 Degrees.

In the all-important matter of turning the eggs in the tray the Bradley is not even approached by any other incubator. Eggs should never under any circumstances be handled by hand during the hatching period. The Bradley turns every egg in the tray in one second. No trouble at all and you place eggs in any position wanted, half turn, clear over, turned slightly, etc., and when chicks hatch out they drop into an ideal nursery tray until removed to the brooder. **We guarantee satisfaction or your money back.**

Don't buy an incubator until you have seen the Bradley catalog and know the Bradley features. It will show you plainly why the Bradley is superior to other incubators.

Write for Catalogue A. Ready for mailing Dec. 1st. Mention this paper

CONCORD, MASS.

**FOR A
GOOD HATCH
USE
GOOD OIL**

Careful attention to details is what brings success in poultry raising. Has it ever occurred to you in your efforts to bring off successful hatches, how much depends on the kind and quality of the oil you use? To get the best results you should have a perfectly clear, bright, steady flame, as that is the only way to preserve pure air and even temperature. Pure air is a necessity in securing a good hatch. There is nothing that will make the air in your incubator impure quicker than a smoky, foul smelling lamp. When a lamp smokes and smells bad it's because there's something wrong with the oil. Poor oil has acid impurities that clog the wick, prevent the free flow of oil, cause a hard cinder to form on the wick and make the lamp smoke and give off deadly fumes. Such fumes are very injurious to chicks. You can avoid all such danger if you will use

"WYANDOT WHITE" OIL

It is oil that is refined by a patented process which takes out the acid impurities commonly found in other oils. It does not clog the wick nor cause a cinder to form. It does not cause the lamp to smoke or become dirty and there is absolutely no danger from gaseous fumes. Wyandot White Oil burns with a steady flame that insures perfectly even temperature at all times. It's the oil to use in both incubator and brooder. Don't be bothered any longer with poor oil. Write to us for our circular and price. We have some valuable information for you.

MODEL

Incubators and Brooders.

Spring is here! No more time for hesitancy now! You *must* have a Model to get out those early-laying pullets. Every week you delay lessens your possible profits.

Perfect Model hatchers are tested, crated and ready for shipment to you. They are the 1907 Models. They are just like the earlier Models, except for an increase in capacity. The Models are not experimental machines, tried in the summer when any machine will hatch, at a time when no poultryman wants to use a hatcher. Models have been tried in every season, in every part of the world. Models hatch a strong and vigorous chick from every hatchable egg. Models are used exclusively on the real money-making poultry farms.

Every detail of an incubator is important to its success as a hatcher. Every detail of the Model is scientifically and practically correct. The most important detail is the acting principle of the regulator—the thermostat. The Compound Model Thermostat gives twice the movement of a single thermostat. I own the exclusive rights to this thermostat, and it **can not now be had** in any other machine. It is the most accurate and the most sensitive in use.

You have always heard that the Model was the best incubator. You have thought that the price was high. Consider these prices, with the capacity, and compare with the prices asked for boxes that are built to look like incubators:

No. 0, 80-egg size, \$14.00

No. 2, 250-egg size, \$29.00

No. 1, 150-egg size, \$20.00

No. 3, 360-egg size, \$37.00

These are the prices for incubators that hatch chickens. Nobody can build an incubator for any less, because no one can build a real hatcher any cheaper than I can; and no one will sell you on a closer margin of profit.

The prices are right. The profits to me are small, I make the profits on the volume of my business. Every year my sales double. Every Model sold sells another.

The prices are the same to you and to your neighbor. They are not marked up for the purpose of permitting discounts. They are exactly what the incubators are worth. The price covers the freight, except on distant shipments.

The Model is fully guaranteed. Try it, and if it does not suit you, send it back, and your money is waiting for you.

The Model Catalogue describes these real hatchers. I will send you also a report book, showing that the Model Incubator hatches more and stronger chicks at agricultural stations; on the biggest money-making poultry plants in the world; for small poultrymen; for fanciers; and for amateurs who never saw an incubator until they successfully operated the Model.

If you have not time to wait for the catalogue and the report book, order direct from this advertisement. You will receive the same careful attention and prompt shipment.

I believe in the poultry business and I have shown my belief. Four years ago I left the Cypress Incubator Company with scarcely a dollar. My only asset was your confidence in me, based on the fact that I had always given you a square deal. The profit on the immense volume of business you have given me in the last three years has gone into the big Model Farm.

I know the poultry business, and have proven my knowledge. I have made the Model Farm pay running expenses and show a profit in six months. Such a thing has never before been done on so large a scale. I can help you to the same results on your plant, whether it is large or small. When you buy the Model Equipment, you buy a claim on my time, and I will stay with you until your plant is a success. You want the Model hatchers for a successful year. Send in your order for a real hatcher at the right price and have your incubator in time for big results this year.

FEED FOR MORE EGGS

Almost every poultry keeper has a favorite ration to make his hens lay. Grain contains only a part of the egg-making materials, but **Rust's Egg Producer** contains the rest and in just the right proportions. Mix it with the regular feed and you will greatly increase the egg yield.

RUST'S EGG PRODUCER

is highly concentrated, and far ahead of anything as an egg-maker. Less than 12 cents worth per week will supply 30 hens. Prices 14c to 25c per lb. Sold by dealers everywhere. Every poultry-keeper should have **Rust's Egg Record** and useful booklet on Poultry and Stock-keeping. Both mailed free on request.

WILLIAM RUST & SONS,
(Established 1854)

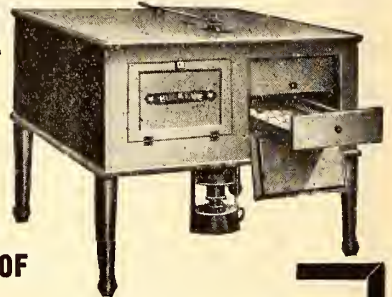

Dept. B,

New Brunswick, N. J.

NO THERMOMETER NEEDED

Yes! We have so perfect a Regulator on the
**AUTOMATIC BUCKEYE
INCUBATOR**

that you need no thermometer in its operation
ALL METAL—ABSOLUTELY FIREPROOF

We set the Regulator and it needs no re-adjusting at anytime and can't get disarranged or wear out. It may be adapted to any kind of fuel and uses very little of it. Because we have ten times the ordinary heating surface. Don't heat the water hotter than the Egg Chambers and have the entire machine surrounded by a perfect Dead Air Space preventing radiation or change from outside influences.

It can't be overheated no matter how careless you may be. It is a continuous hatcher simply because each Egg Chamber is a Separate Incubator. Moisture and Ventilation are automatic and the temperature of every cubic inch of the interior of the Egg Chamber is the same all the time.

It will hatch more and healthier chicks than any other Incubator, simply because of its

immunity from chill or overheat and because we maintain at all times precisely nature's conditions of temperature, moisture and pure, fresh air.

Pretty broad claim this? Well! we guarantee it for 5 years.

If you want to save Money, Time and Worry and make poultry raising both profitable and pleasurable—Send for our **FREE CATALOG** and let us tell you why it is all and more than we claim above. How

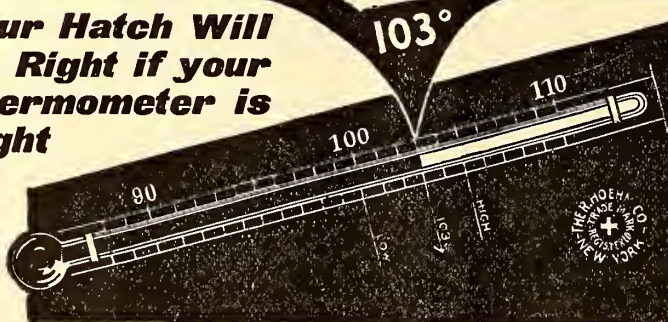

We sell it on the INSTALLMENT PLAN

and what guarantee we give that you will get all and more than we have led you to expect.

Buckeye Incubator Co.,

Box 2, Springfield, Ohio

**Your Hatch Will
Be Right if your
Thermometer is
Right**

An Incubator Thermometer is small in bulk and in price, but it is the most vital part of an Incubator. It is the heat that hatches, but to hatch right the Thermometer must be right. It makes little difference what make of Incubator you use, if your Thermometer is accurate and you keep the temperature at 103 degrees. To be absolutely safe, use the

HOEHN RED CROSS THERMOMETERS

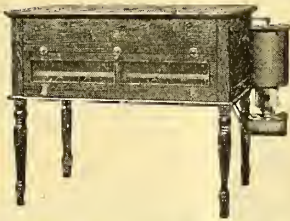

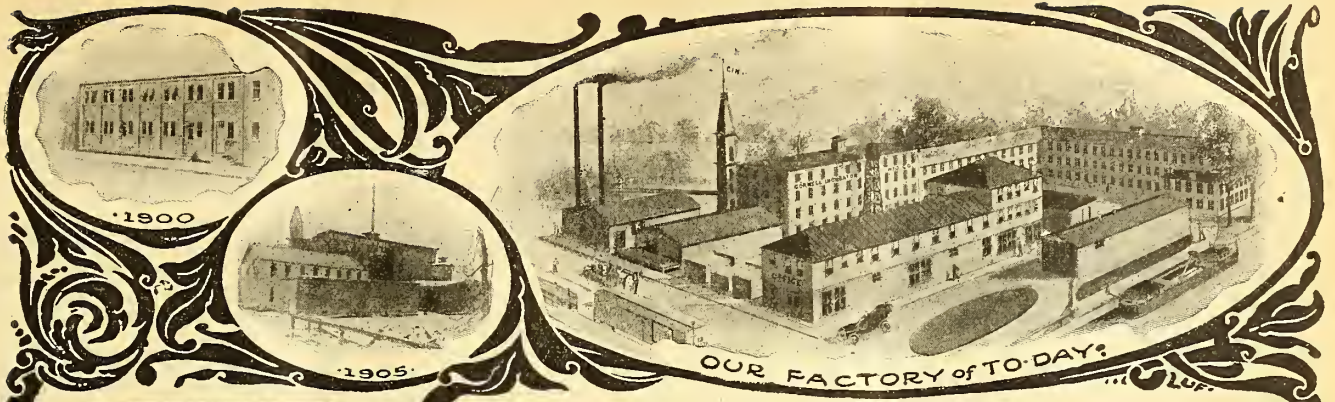

The bulb rests upon the eggs so that the Thermometer gives you the temperature you want to know. It is easy to keep this at 103 degrees, because this point is emphasized by a narrow point. The black metal frame with white graduations and figures makes it easy to read. These Thermometers are all well seasoned and accurately tested before being shipped. Send 75 cents for a sample Thermometer (prepaid) or ask for catalog illustrating other styles. This catalog is free. It answers your questions about Incubator Thermometers.

HERE'S THE KEY TO SUCCESS.

Hatch your CHICKENS under natural conditions, with the precision of the old hen, and without care or anxiety to yourself.

The Universal Regulator

is operated directly from the thermometer lying on the eggs; an electric connection being made through the mercury in the thermometer at 103° raising the damper if the heat of the eggs goes above, and closing damper if the heat goes below that point a fraction of a degree.

Impossible to spoil your eggs.

Never requires any adjustment.

Hatches every egg a hen can hatch.

Produces chickens that will live.

Made to last a life time.

Guaranteed to be satisfactory.

Send postal asking for illustrated booklet.

THE UNIVERSAL SPECIALTY CO.,
PLAINVILLE, CONN.

THERE IS NO QUESTION ABOUT YOUR BUYING THE "Queen" INCUBATOR

We are only afraid that its superiority may not be called to your attention before you buy some other make.

If you were going to build an Incubator for your own use would you select as cheap materials as you could find and put it together with as little work and expense as possible or would you do as good a job as you know how?

We build the "Queen" the way you would — by selecting every board that goes into it — by using only the highest grade of heavy sheet copper — by carefully examining every sheet of asbestos that lines the walls — by double jacketing the lamp — by using a lamp that saves every degree of heat — by employing the finest workmen in each department that are to be had at any price — in short we build the "Queen" just like you would build it if you were making it for your own use.

In our factory we have every latest device for turning out perfect work, for saving time and labor — which means money.

Our up-to-date machinery enables us to offer the "Queen" to you at prices no higher than other manufacturers ask.

WE PAY FREIGHT

If you want a machine that will hatch

every fertile egg — if you want an Incubator that will save two-thirds of the oil other machines use — if you want an Incubator that will save you time, worry and work — if you want an Incubator that is guaranteed in every point then you will buy the "Queen."

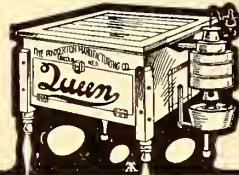

We give any kind of a guarantee you want — you name the terms, we ship the machine.

Perhaps you think it queer that we can offer the "Queen" at prices asked for ordinary machines but there is nothing queer

about it — we simply have the facilities for turning out hatching machinery cheaper and better than it can be made in any other factory; and our desire to build up a large business prompts us to sell better Incubators than anyone else is making.

The only plan to avoid hatching failures is to buy the "Queen," an Incubator that does the work — one that is made without sparing expense — one that has been tried and tested and found to be as true as the best mechanical skill and nature will admit.

Don't make the mistake of buying an Incubator until you have sent for our large, beautifully illustrated, Free Catalogue.

DO YOU KNOW The Potter System of Selecting Laying Hens ?

Don't kill a hen in this condition but learn the secret of selecting the laying from the non-laying hens.

Greatest Discovery of the Century in the Poultry World

Do you know how you can have \$2 profit not a \$1 loss, on every hen you keep?

How to breed only laying hens?
How to select your laying hens?
How not to kill your laying hens?
How to mate your birds for best layers?
How to save feed and labor and money?
How to keep the layers and kill the non-layers?
How to tell the drones and the barren hens?
How to select the best laying pullets?
How to stimulate the hen's laying organs?
How to estimate the number of eggs a hen will lay in a week or a month?
How to keep fewer hens and make more money?
How to keep your fowls and their quarters free from mites and lice?
How to hatch chicks that will make laying hens?
How to make poultry pay every month in the year?

DO YOU

want to make more money on your poultry? Do you want to be able to pick the layers from the loafers in your flock? Decide for yourself whether you need the valuable information we are offering. Thousands of poultrymen are using the Potter System to their profit and advantage. So can you. Write today for free circulars telling about it.

DON'T BUILD THAT NEW HEN-HOUSE

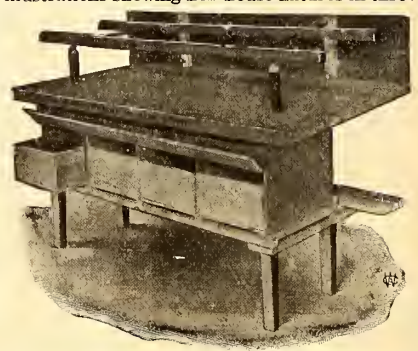

or think of fixing up the old one until you have seen our large new 64-page catalog on poultry house fixtures. The biggest and best ever issued; over 50 illustrations showing hen-house fixtures in three

styles and twelve sizes. Also "Simplex" Trap Nests; W. P. attachment, etc. No poultryman can afford to be without this book. For eight years we have manufactured this line of goods. Thousands of poultry houses in every section of the country are equipped with Potter Fixtures. You can have convenient and sanitary quarters, and you can save time, worry and money by using them.

Our Catalogue tells you how to keep free forever from these pests — LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for one red stamp to cover postage.

WRITE US TODAY

for free circulars on the POTTER SYSTEM and our new catalog. They will please and interest you.

T. F. POTTER & CO. - Box A, Downers Grove, Illinois

One half of all the chicks hatched never get more than three weeks from the shell

THAT'S the distressing part of the poultry business. It is no trouble to hatch chicks. All the trouble lies in the raising.

Little chicks die by thousands, of bowel trouble, of "sleepy disease" or some unknown cause.

The crying need is for some right ration as to what the weak, unused stomachs of the little chicks will stand and what it is necessary to put into them.

For there is no question about it—90% of all the deaths among little chicks are due to improper feeding.

Darling's Chick Feed

gives poultry raisers a feed that is adapted to little chicks' needs.

It is a scientifically balanced ration, not

prepared for broiler making, for fattening, for laying hens—not prepared or intended for any other use than just feeding chicks.

Stop the Losses

You can double your profits if you can raise practically all the chicks you hatch.

The secret lies in feeding something your chicks will digest and assimilate.

There is no trouble about their digesting Darling's Chick Feed. It is the one remedy for your losses.

Here is a good part of the reason why they are better than other feeds:

Darling & Company are not in the milling business. We are not manufacturing breakfast foods. Darling's Chick Feed is not a by-product nor waste from any manufactured article.

• The best grains and seeds are selected. We take only such as are known to be adapted for feeding chicks. They are properly screened and cleaned. They are rightly balanced and they are reduced to proper size.

What Poultrymen Say

Give me Darling's Chick Feed and I can raise 95% of all the little chicks I can hatch. I have proved this. It makes them grow and they are spry. I don't want anything better.

James Gage, Elgin, Texas.

Our young poultry is doing nicely. You ought to see our young ducks grow.

E. Green, Ceylon, Pa.

My hens have laid more eggs and my chicks have grown better than ever before.

August W. Schroeder, Chestnut, Ill.

I have ducklings eight weeks old that have been fed your feed that weigh 5 lbs.

F. E. Shaffer, Wakenda, Mo.

Feed for Growth

Darling's Chick Feed causes a rapid growth right from the start.

Being adapted to their requirements, chicks invariably develop a good, strong framework that makes for the healthy full-grown fowl.

They mature early and pullets begin laying much sooner than those fed in the usual manner.

Fowls, like other animals, require special purpose feeding to make winners.

If your object is laying hens the surest way to get them is to start the chicks on Darling's Chick Feed.

The same course will give you more weight in broilers and roasters, finer, larger, market fowls and do it in shortest possible time.

It is worth while. The returns you will get will outweigh many times over the little expense of special feed to start chicks right.

Price \$2.50 per 100-lb. Bag

Let Me Quote You a Price on a
CHATHAM
Before You Buy
an Incubator

It will take one penny for a postal, and a minute of your time, to write for Special Prices on 1907 Chatham Incubators and Brooders. No matter what kind of a machine you have in mind—no matter where you intended buying, or when—TODAY you should send me a postal and get my catalog and prices.

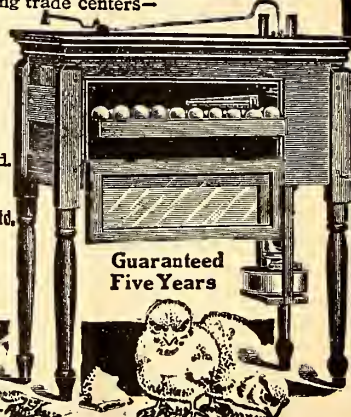

My book will tell you how good Incubators are made—will tell you what you ought to know about poultry business—will tell you about brooders—will post you on the best way to make money out of poultry—and my prices on Chatham Incubators and Brooders will show you how to start in the poultry business for a small amount of money.

Chatham Incubators
Sold on 84 Days FREE Trial

freight prepaid—guaranteed 5 years. That's the story of the celebrated Chatham Incubator. We sell them on trial, pay the freight, and guarantee them for 5 years. With proper care, they last a lifetime. I am going after the Incubator business of the country this season, and I intend to get it on great, big value in the machine and a very low price. Chatham Incubators are the best possible to make. They are tested, and known to produce the largest percentage of strong, healthy chickens. We have two immense factories—one in Canada and one in the United States—and run our own experimental station where a battery of Chatham machines are in operation every day in the year, under the care of expert poultry men. If you are most ready to buy a machine now, put it off for a day or two. Until you can get my prices and catalog—then decide on what to buy.

We have warehouses in all the leading trade centers—where Chatham Incubators and Brooders are kept in stock—insuring prompt delivery. Depend on this:—With the immense amount of money—\$500,000—that we have invested in the Incubator manufacturing business, we are sure to give our customers every improvement worth having in the Chatham Incubator. We can afford it, because that is what brings us the largest business in the world. That is all I can say in an advertisement. I invite you to write for my prices and book. Address me personally.

WELL HATCHED IS HALF REARED

Some Important Features of the Prairie State Incubators and Brooders

The 1907 Prairie State Incubators will hatch the largest and strongest chicks of any machine built to date. This is a very strong statement and we would appreciate the opportunity to "show you." Every particular is fully set forth in our 1907 catalog, which is yours on request. Every one who may be interested in incubators is anxious to know why one particular make is better than another, or what features are distinctive and most practical for general use.

We want to impress you with the fact that every improvement and device used in the Prairie State Incubator is the result of developments which experience and every day use has proven to be both practical and successful. We have retained the best and eliminated the known weaknesses that in any way tend to lower the standard of efficiency. We have been governed by actual results obtained and not for a moment were we influenced by any particular theory or anything else that actual, prac-

tical use could not put the stamp of approval upon. That's one reason for our success.

The diffusion heating system without screens, in combination with mild radiant heat from metal deflectors in top of egg chamber is another reason.

The Egg Chamber containing more cubic inches of air space per egg than any other machine on the market is another reason.

The natural vigor is retained by preventing evaporation of the eggs in the presence of an ample supply of life-giving oxygen. Evaporation is kept down to 9 and 11 per cent same as natural incubation, by incubating the eggs over wet sand. Three to four times the air enters the egg-chamber in this machine than any other, another vitality producer.

Sound principles of construction are a good thing but what is better and more convincing to any of us is what the machines accomplish in actual practice.

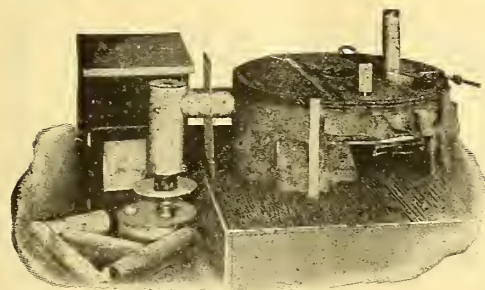

We herewith give a list of hatches of the Prairie State Incubators the past season. These are not single hatches but a number, with large quantities of eggs, as the result of a season's work, commencing in cold weather and continuing in the summer and it speaks much for the high efficiency of the Prairie State Machines in actual practice:

	No. of hatches	Per cent of hatch
Wm. H. Taylor, W. Beaver Creek, Md.,	2	98
Mrs. Otis Doty, Charleston, Ill.,	4	100
J. C. Warren, Prospect, Pa.,	3	98
Jessie L. Adams, Takoma Park, D. C.,	3	95
Andrew McMullen, New-tonville, Ohio,	3	98
W. A. Goodwin, Dryden, N. Y.,	3	95
Mrs. F. E. Bond, Spencer, Mass.,	6	98
H. Hulett, Clymer, N. Y.,	5	92
W. J. Scheider, White Oak, Ga.,	3	97

Just send for 1907 catalog ---it gives all particulars and is the most interesting catalog of the year.

You Can Make Your Own Brooder

Get a Prairie State Universal Hover and an old piano box and you can make a brooder that can not be equalled no matter how much you pay for it. Read what Mr. T. E. Orr, the most widely known poultryman in this country says about his piano box brooders. (See letter and illustration below.)

The right kind of a brooder—one built upon correct principles ---will not only rear practically every chick put into it but will promote vigorous growth and development to a pronounced degree. It is not sufficient that the brooder keep the chicks alive, although many seem to think this is all a brooder is expected to do, but it should stimulate healthy, rapid, sturdy growth as well.

No brooder has met with the instant success or proven so practical in use as the Prairie State Outdoor Colony Brooder, the Indoor and the many adaptations of the Universal Hover. Chicks are now being raised in zero weather and last summer in July and August—extreme conditions—with exceptional success. Our brooders have made possible the artificial rearing of chicks that before was impossible. Send for our Brooder Catalog. It will tell you how it is done and who are doing it right along. It's free.

BEAVER HILL FARM.

Home of Prize-Winning Wyandottes.

Beaver, Pa., April 25, 1906.

PRAIRIE STATE INCUBATOR CO.

Dear Sirs:—I think I ought to tell you how well we like your new Universal Hover. We now have five of them attached to our big piano-box brooders, shown on this sheet, and it has been a constant surprise to me to see how thoroughly your hovers, with a No. 2 burner, heat these immense brooders. Last night it was cold and windy, ice formed nearly an inch thick. We made a record of all thermometers at 7:30 P. M., and 5:30 A. M. At first test they ranged, as we wanted them, from 85 to 92° F., varying with the age of the chicks. The two subsequent tests showed a variation of scarcely a degree in any one of them. Yours truly,

T. E. ORR, Secy.-Treas American Poultry Assn.

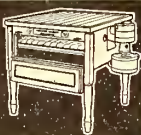

Mr. T. E. Orr's Five Piano-box Brooders Equipped with Universal Hovers.

98 CHICKS FROM 100 EGGS

There's a record hard to beat. J. F. Miller, Sutton, Neb., hatched them. He says:—"It is the best machine I have ever used and this is saying a good deal, as I have several different makes." With a machine like the

POULTRY LEADER INCUBATOR

beginners quickly, easily learn how to get lots of chicks. Only 8 to 15 minutes work daily. Heat steady; regulator sensitive; ventilation even. Nursery roomy. Easy to clean. Low in price. Write for New, Handsome Catalog filled with pictures. It's free.
EMIL OCHSNER, Box 10, Sutton, Nebraska.

RAISING CHICKS

Your success with chickens is measured by the way you feed and take care of them. I can help you to get the best results. I have the right foods—Chick Manna, "Vigor" Foods, Cyphers' Incubators and Brooders, and whatever else you need. Write for my free Illustrated Poultry Supply Book that tells about the best supplies of every sort. Tell me your problems and let me help you.

TRACEY'S RHODE ISLAND REDS ROSE AND SINGLE COMB

Winners at Madison Square, Boston and Philadelphia. Their record this season places them among the best. At Poughkeepsie, 1st cock, 1st hen, 1st ckl., 1st pullet; no pens shown, S. C.; 2d cock, R. C., one entry. At Philadelphia, clean sweep on both R. and S. Combs, winning silver trophy cup, all varieties of fowls competing. At Madison Square Garden won 1st pullet; another pullet, Red Lady, winning special for best colored female. This pullet was claimed by many leading R. I. Red experts to be the best R. I. Red female ever shown, but owing to the absence of ticking in hackle Judge Riggs didn't place her; also silver cup. At Auburn 3d and 5th ckl. At Boston 1st ckl. and 4th pullet cockerel winning color special; also cup for best S. C. male in show. At Philadelphia big show the Reds were conspicuous and in a big class in hot competition with winners at Madison Square Garden, Hagerstown and other big shows, we won 2d cock, 1st and 4th ckl., 2d. 4th and 5th pullets, 1st pen, 9 pens competing; cup for best display, cup for best pen, cup for best male and female, winning every special offered on S. C.s, including all shape and color specials, R. C. ckl. winning shape special. Our Red exhibit was the talk of the show. Eggs from matings that will produce winners \$3 and \$5 per setting. Eggs from choice Columbian Wyandotte pens \$3 per 13. Address, mentioning American Poultry Journal,

GEO. W. TRACEY

Hinderhook, N. Y.

Can You Tell Why Chicks Die in the Shell?

Perhaps not one person in twenty can. Why a chick which has developed almost to the point of leaving the shell should die is a mystery to many. Of course, there is a cause for this, and when that cause is understood the remedy ought to be suggested at the same time.

Heat, moisture and ventilation are the three essential elements to the hatching of chicks. If any one of these elements is lacking in the slightest degree, failure results, or at best but partial success will obtain.

The New Method Incubator

Manufacturers of the old style box incubators have always realized the weakness of their methods and to meet the complaints of customers have assigned as a reason why chicks die in the shell first one cause and then another—finally laying the blame on the incompetency of the user. But this did not solve the problem. In The New Method Incubator we have perfected a mechanical apparatus that correctly duplicates Nature's methods of incubation—we are able to control the three elements essential to hatching. The open circle self-ventilating nest, with its soft, downy pads, automatically regulates the moisture and ventilation perfectly, while the conical deflector distributes the heat evenly to every portion of the egg-chamber. These exclusive features make the New Method the safest, surest, simplest hatcher ever devised. New catalog describes them all. Write for it today—it's free.

New Method Incubator Co., 150 W. Main St., Morrow, O.

FROM BIG TREES

TO PETALUMA INCUBATORS

California Redwood

has been used for thirty years in the manufacture of

PETALUMA

Incubators and Brooders

(Awarded Gold Medal St. Louis and Portland Expositions)

because we have found it superior to all other kinds. Several other incubator makers are giving their testimony to our good judgment by advertising to also use California Redwood. It is not only true that Petaluma Incubators and Brooders are made of the best lumber in the world, but every other article used in their construction is of the highest grade, and therefore these "Standard of the World" Incubators and Brooders occupy the same relative position to all other Incubators and Brooders that the mighty California Redwoods do to other trees.

Read "A Bit of Incubator History," in our new catalogue. We send it free. Address nearest office.

PETALUMA INCUBATOR CO.

Box 150, Indianapolis, Ind.

There's Money in Poultry

Not everybody makes it, but not everybody uses good judgment in outfitting for the business. Don't expect to make money out of poultry if you cannot hatch dependably, at all seasons, in all climates, under all conditions, upwards of 90% of your fertile eggs. Not all incubators will do this. Show your good judgment by selecting one that will.

Raising all the chicks you hatch is just as important. Just any sort of a box for a brooder will not do. See to it that you get the best possible substitute for the hen to mother your chicks.

You will start out right in the poultry business and go a long ways toward assuring your success if you outfit with

SUCCESSFUL Incubators and Brooders.

They are machines that have been proven. Many thousands have been in use for many years. They can be relied upon for uniform good results. Every user testifies to their perfect self-regulation, their dependableness and their uniform good results under all conditions.

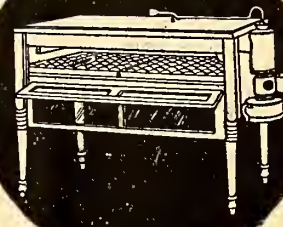

Successful Incubators and Brooders for years have been, and now are, sold with the positive guarantee that, under like conditions, they will hatch as many and as strong, vigorous chicks from a given number of eggs, and will brood as many to maturity, as any other incubator and brooder in the world.

This guarantee protects you. Start right with proper machines. Incubator and Poultry Catalogue Free. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

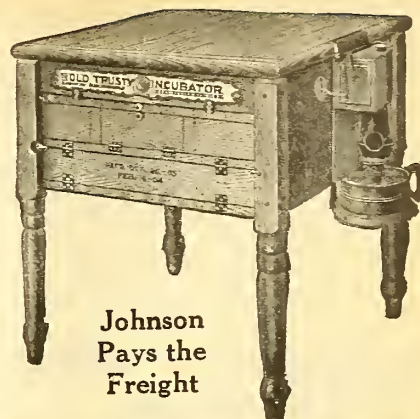

DES MOINES INCUBATOR CO.

1 Second St., Des Moines, Iowa.
We have a full line of poultry supplies, poultry and eggs.

SUCCEED WITH A SUCCESSFUL

Let me send you an Old Trusty
 —on 40, 60 or 90 days' trial
 —with a 5 years' guaranty
 —freight prepaid by me
 —you to be the judge of its work.

Johnson
Pays the
Freight

MORE Old Trusty Incubators and Brooders were sold last year than of any other one kind on earth.

They were sold on a free trial and a positive guaranty,

—and they *stayed sold!*

Now why? The nearly 40,000 chicken raisers who bought 'em had their eyes open and knew they didn't have to keep them unless they wanted to.

They kept them because Old Trusty

- is better built
- needs less attention
- hatches larger per cents
- and is the most economical incubator that you can find in this big, wide world.
- takes less oil
- produces stronger chicks
- is sold on a fairer plan

The 40,000 people who bought Old Trusty last season found that they did *better work* than other incubators in the same neighborhood.

Of course I'm not foolish enough to try to make you think that you'll have to drop the chicken business if you buy some other incubator, but I *do* say that I can prove to you that Old Trusty—and say, the machine deserves that name—Old Trusty

Isn't that the kind of incubator *you* are looking for?

Johnson
Pays the
Freight

Old Trusty
Incubators
and Brooders

5-Year
Guaranty

are built on Experience—not theory. That's the Reason.

I believe I've *started* more folks to raising chickens by incubators than any other living man.

I've been at it for more than 14 years.

I've built thousands and thousands of incubators and a great big percentage of them have gone into the hands of *beginners*.

They *had* to be automatic and self-regulating—practically run themselves—or their users would have failed.

It has been my hobby to build the most automatic incubator in the world—and to build it as good as I know how.

That's why I kept on experimenting until I perfected the Old Trusty patent copper-pipe heating system—the *only* heating system that gives a perfectly even radiation of heat to all parts of the egg chamber.

That's why I perfected the donhle connected wafer, direct-action regulator which is so perfect that Old Trusty could be run *without* a thermometer if you wanted to. This trustworthy Old Trusty regulator is *within* the egg chamber and *out of the way*. It is counter-balanced within itself and never needs re-adjusting. It is attached and connected when shipped.

Old Trusty has a patented jacket around the boiler that saves from 15% to 50% of the oil.

Old Trusty is made of California redwood, with double walls throughout, with dead-air space between—matched and joined like a piece of furniture and not a crack or knot in the entire incubator. And it holds the heat better than any other wood ever used for an incubator.

Bnt, this isn't the place to describe all the good points of Old Trusty. The best way to find out about them is to get the machine on trial and compare it with others:

—Compare the materials used in them—compare the way they are made—compare their durability—compare their heating systems—compare their regulators—compare their percentages of hatches—compare the strength and liveliness of the chicks they hatch—compare their economy of oil—compare their ease of operation and you will decide, just as thousands and thousands of chicken raisers have decided in years past, to put your trust in Old Trusty.

We can fill your order promptly this year. Our big factory helps us keep up with orders.
At any rate

Send for Johnson's Free Book

It's bigger and better than ever. More good pictures—most of them of chickens and chicken raisers who know and love Old Trusty. It's chock-full of good, common sense chicken talk, founded on experience, which, after all, is the *only* kind of "scientific hatching" that's worth paying any attention to.

It tells all about Old Trusty and the most liberal trial plan ever given an incubator.

If you raise chickens or are thinking of raising chickens, you ought to have this book.

And all it costs you is just the asking for it. Let me send you one. What do you say?

Who Is The Judge?

This feed will raise more chicks, better chicks, stronger chicks and quicker and costs no more. If your store keeper does not handle the Steinmesch Specially Prepared Chick Feeds, write us. On all orders for 200 pounds or more, we will pay the freight to any part of the United States.

STEINMESCH'S Extra Quality CHICK FEED

is prepared entirely with a view of offering poultry raisers the very best feed for the rearing of chicks. A practical experience with chickens for 20 years, backed up with the experience of the best authorities in the country on raising chickens, justifies us in saying that no chicken feed is complete without grit. No balanced ration for poultry is complete without grit—we use the very best grit that money can buy—5 pounds of grit to 100 pounds of feed. We use pin-head oat meal, cracked grains and seeds, beef scraps, bone, charcoal, etc. 20 different kinds. Our feed is free from dust and dirt. It is all feed—no waste—therefore, economical, and chicks if properly fed will eat every particle of it, including the grit. We sold 1,000,000 pounds last season and we are going to sell 2,000,000 this year. It is used by William Ellery Bright, Waltham, Mass., the Barred Plymouth Rock and S. C. Brown Leghorn King of the Country; by O. L. King, Walnut Grove, Ill., and R. W. Wales, Iowa City, Iowa the Barred Plymouth Rock Kings of the West; by Mrs. Della Maxwell, Fayette, Mo., who has won more and larger prizes on Barred Rocks than any other lady in the country; by J. A. Vannatta, Vandalia, Mo., the S. C. White Leghorn King; by C. A. Morton, St. Louis, and Henry P. Mason, Fayette, Mo., the Buff Rock Kings of the West; by Bruce Bros., Crescent, La., and H. W. Blanks, Columbia, La., the biggest poultrymen in Louisiana; by William Miller, Crescent, Mo., the White Rock breeder, who paid \$1750.00 for 7 White Rocks; and by hundreds of poultry fanciers and experts who cannot be fooled with the feed that contains no grit. Over 500 dealers are handling the Steinmesch Extra Quality Chick Feed. If your dealer is not one of them, give us his name or send to us direct and we will ship promptly, and on an order for 200 pounds or over at a regular price of \$2.50 per 100 pounds, we will pay the freight to your door—any part of the United States. Send for our catalog of other supplies anyway. It is free. Every chicken man ought to have it. We are general Western agents for the Cornell Incubators, Peep-o-day Brooders, Mann Bone Cutters and Empire Coops. We have 1,000 head of fancy poultry on our farm, all varieties. We sell eggs for hatching. Every good thing for the poultryman—Steinmesch has it. Address,

AMERICAN STANDARD OF PERFECTION

OFFICIAL GUIDE TO POULTRY CULTURE
Latest Revised Edition (1906)
304 PAGES; 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
WORK ON THE TECHNICAL POINTS OF
STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
MORE THAN THREE THOUSAND DOLLARS

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

- A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.
- The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.
- Instructions to judges and the official "cuts for defects"—invaluable information for every exhibitor who wishes to be successful.
- The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world's best poultry artists, and were revised and approved by members of the A. P. A. at a four-days' session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

THE AMERICAN STANDARD OF PERFECTION IS AN INDISPENSABLE
GUIDE IN THE BREEDING AND EXHIBITION OF PURE BRED POULTRY

EVERYTHING FOR THE FOWL FAMILY

We appreciate the fact that the practical poultryman and the farmer who keeps a few hens are always anxious to increase their profits, and want the best foods and appliances they can get to do that. For over sixteen years we have been handling poultry supplies. We have built our business on the theory that the best is none too good, but that it always pays to sell the best. Our business has grown bigger every year—tangible evidence that we supply high grade goods at reasonable prices, that we deal fair and square, and that our patrons know the advantages of buying everything they need from one house. You will, too, when you get your first order from us. Our catalogue illustrates and describes an immense line of

POULTRY SUPPLIES

as Cut Alfalfa, Clover Hay, Electric Poultry Food, Mixed Grains, Chick Foods, Crushed Oyster Shells, Beef Scraps, Bone and Meat Preparations, Animal Meal, Blood Meal, Ground Charcoal, Grits of all kinds, Egg and Stock Foods, Remedies, Condition Powders, Lice Killers, Insect Exterminators, Spray Pumps, Leg Bands, Chicken Markers, Caponizing Instruments, Thermometers, Egg Testers, Lamps, Nest Eggs, Nests, Egg Boxes and Baskets, Drinking Fountains, Pigeon Supplies, Feed Pans, Clover Cutters, Root Cutters, Green Bone Cutters, Incubators and Brooders, Poultry Houses, etc.—there's nothing you need that we don't have, and our catalogue will be worth money to you. Barnett's S. L. Wyandottes

At Indianapolis, Feb. 2-8, '07, in the largest and strongest class of Silvers ever shown, we entered 1 ck., 1 pul., 1 hen and 1 pen, and won 2d pen and 4th hen. Eggs from 7 grand pens, \$3 per 15; \$5 per 50. Large illustrated newspaper circular free.

E. B. PARNETT & SON - - - Box 92, MICHIGANTOWN, IND.

Start Right And Buy From The Winning Strain Of White Plymouth Rocks.

My strain has been line bred for eight years, and have always been winners. At the Chicago Show, January 23-31, 1907, I won 4th cockerel and 4th pullet in the hottest competition. At the big Wisconsin State Show, Feb. 1-6, 1907, in a class of 117 White Rocks I won as follows: 5th cock, 1st, tie for 3d, tie for 5th cockerels, tie for 1st, 3d, 5th hen, 1st pullet, 1st and 5th pen, specials too numerous to mention. Eggs from pens containing winners at Chicago and Wisconsin State Show, \$3 per 15, \$5 per 30; good hatch guaranteed. Cockerels with score cards scoring 92% or better in the show room under McClave, \$5 each while they last; good exhibition pullets at \$2 and up. Satisfaction guaranteed or your money cheerfully refunded.

CARL H. KRIPPENE :: Oshkosh, Wisconsin

Excelsior Barred Rocks

Leading winners at Kansas City and Chicago, 1905 and 1906. Made this season what is to me the proudest record, by winning the blue in so many leading shows in the hands of my customers. If you need eggs for hatching it will be to your interest to buy from descendants of Excelsior, the \$1000 male that is pronounced by leading judges the best ever produced. 1907 mating list free.

W. W. BYWATERS :: Box 14, Camden Point, Mo.

King's Barred Rocks

Made another KING ROW record at the recent Illinois State Show by winning 15 regular prizes, including all specials and state club cup for best cock, cockerel, hen, pullet and pen. Birds bought of me direct or hatched from eggs, have helped my customers into the King Row at many of our largest exhibitions the past winter. Eggs from the winning kind this season only \$6 per sitting. Selected breeding birds always for sale and satisfaction insured. Send for egg circular, large testimonial sheet and show record, it would interest you. If you want the best

Trap Nest Your Flock in 1907!

and be progressive. Get the **SUPERIOR**, best and cheapest. Write today for free catalog and investigate the Trap Nest Idea.

J. A. Bickerdike:—

After using your Trap Nests six months I am glad to say they are very satisfactory. I have tried three different makes and have thrown them out entirely. Your Nest is more simple, easier to operate and never fails to catch the hen. Would state I consider Trap Nests as essential to successful breeding as any one thing, and I can not but see that the Superior has a brilliant prospect, and assure anyone who is looking for a nest "all good points" yours is the one they want.
 Yours respt.,

What a Lucky Man Got Last Year

\$100.00 Cash in American Poultry Journal's
 Subscription Contest

(CHICAGO, ILL. JUN 27 1906 190 No 7398)

THE First National Bank of Chicago

PAY TO THE ORDER OF

S M Yoder \$100 00

One hundred and no 100 DOLLARS

AMERICAN POULTRY JOURNAL PUB. CO.

Per *Geo E Oates* Pres.

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sells on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize. Wishing you and the Journal success, I remain
 Very truly yours,
 S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

you can get premiums worth another \$100 or more, and you have your choice of 100 different premiums.

All Who Send Us Five Subscriptions

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

American Poultry Journal Publishing Co., - Room 510, 325 Dearborn St., Chicago, Ill.

First Prize Cock at Madison Square Garden, 1904. Bred and owned by Gardner & Dunning.

The Greatest Triumph in Barred Rock History

At Madison Square Garden, January, 1906, for the first time in the history of the breed, **ALL THE BARRED ROCK MAGNATES** of the East met in competition. Here, in a class of four hundred and seventy-four birds, for quality never before equaled in any show room in the world, under two of America's leading judges,

Gardner & Dunning's Barred Plymouth Rocks

surpassed all previous victories in their own unequalled record, and conclusively proved their superiority over all other strains. In this unparalleled competition we won twice as many regular cash prizes as any other exhibitor, the magnificent National Loving Cup offered by the American Plymouth Rock Club for the **PULLEY**, and the prize of all prizes, the **GOLD SPECIAL** for **BEST DISPLAY**. In the contest for best display we won **26 POINTS**, our nearest competitor only 14. Our winnings were as follows: Cocks, 4 and 6, in a class of 46; Hens, 1 and 2, in a class of 60; Ckls., 2 and 3, in a class of 106; Pullets, 2 and 8, in a class of 87; Pen, 3, in a class of 35.

WE BRED THE WINNERS

All of the above winners, excepting the first prize hen, were bred and raised in our yards. The first prize hen was purchased by us from one of our customers. She was of Gardner & Dunning Strain, sired by a cockerel from a **SETTING OF EGGS WE SOLD**. Do you want any better proof of the quality of the **EGGS WE SELL**? Our **FREE CATALOGUE** and **MATING LIST** give full description of our matings for 1907, with prices of stock and eggs, and tell you how we produce our **PRIZE WINNERS**.

GARDNER & DUNNING M. S. GARDNER
Manager AUBURN, N. Y.

FOR OUR \$7.90 DELIVERED 100 EGG HATCHING WONDER

The 100 - egg Hatching Wonder is 26 inches long, 21 inches wide and 14 inches high. It has triple walls, triple top and triple bottom, scientifically constructed to hold the temperature necessary within the incubator for the least expenditure of oil, regardless of how cold the air outside. It has a large aluminum coated tank and heater, and our regular Victor regulator, which has a record of maintaining the temperature of 103 degrees for the 21 days of incubation without appreciable variation.

In addition to the substantially built incubator with its egg tray and nursery, aluminum coated tank, heater, lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, giving valuable hints as to the raising of young chicks, besides telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered shipped with the incubator, the delivered price of both is only \$11.50. The Brooder provides a necessary home to take the place of a mother hen's sheltering wings during the first weeks of a chick's life, and up to the time a hen would wear her brood. It furnishes a good warm, evenly heated, well ventilated nestling chamber large enough to afford sufficient exercise when weather conditions do not permit of an outdoor range.

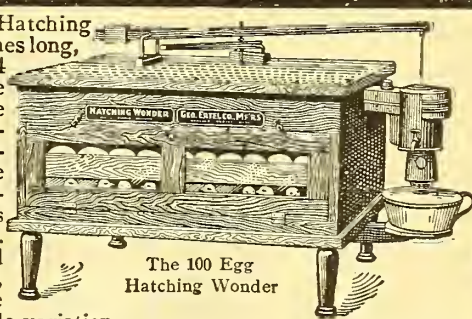

Better write us to-day and have your outfit ready to start up just as soon as possible. We will ship promptly on receipt of your order. Remit in post office or express money order or bank draft, and if the machine is not just as we represent it, you may send it back and we will return the full amount you paid.

You need have no hesitation in dealing with us as we have been in business 40 years, and have a paid up capital of \$60,000.00. We have a reputation for fair, square, upright dealing, which we intend to maintain. You can ask your banker or express agent about us.

If you want further information or a larger machine, write for our large illustrated catalogue "The Victor Book," testimonial sheets and order blank. A postal will do, only write us to-day before you forget.

NOTE: The Incubator delivered West of the Rockies is \$9.90; the Incubator and Brooder together \$14.75. Our prices are delivered at your railroad station, not f. o. b. factory, which means you may have to pay cartage from the factory to their station.

A NEW DEPARTURE IN INCUBATORS

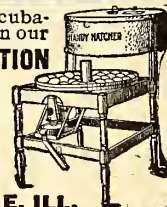

It takes a lot of grit and well grounded conviction to go exactly opposite to long established theories, but we have done that very thing in The Handy Hatcher—we have successfully done what all other incubator builders have said would be fatal to the germs in the eggs. In our **NEW APPLICATION OF NATURE'S METHOD OF INCUBATION**

we go counter to all these old theories, but results have proven that the theories were wrong and our convictions were right. The very thing that is rigidly avoided in all other machines becomes the strong feature of our incubator. You'll want to know **how** and **why**. Write today—free catalog describes this wonderful invention which becomes at once the safest, surest, simplest, most perfect hatching device ever invented—the machine everyone can use successfully.

HANDY HATCHER CO.,

The Roosevelt Comfort Rocker. Very stylish finely figured quarter sawed oak, veneered seat, finished golden. The most beautiful and comfortable rocker ever Given Free with a \$10 Assortment of Groceries and other Products.

An Easy Way

When you purchase \$10 worth of groceries from your home merchant a number of people have had their profit and expenses added to the actual cost of the goods after they left the manufacturer and before they reached you, which you pay. When you purchase \$10 worth of groceries and other products from the manufacturers you pay no merchants' profits and expenses—you secure the goods at actual manufacturer's cost.

This accounts for the fact that we can give you your choice of \$20 worth of products, usual retail value, without premium for \$10. Or we give you \$10 worth of products, usual retail value, and a \$10 premium both for \$10. We pay the freight by enclosing extra goods to cover freight charges. Every article and every premium is guaranteed to give satisfaction or money refunded.

Kansas City, Missouri

"RINGLET" BARRED PLY. ROCKS

IN THEIR PURITY. At the big Wisconsin State Show, January, 1906, our birds made a clean sweep, a record positively unapproached by any other breeder east or west. We have a grand lot of breeders, exhibition pullets, ckls., yearling cocks and pullet-bred ckls., positively fine. We will sell you as good a bird for \$10 as you can buy elsewhere for \$20. Other priced birds in same proportion.

SPECIAL: We have mated up for the season ten grand yards to produce our exhibition ckls. and pullets. We can truthfully say there is not a breeder in the country who has a finer and more healthful lot of birds in their yards, and but few have their equal, although some have the nerve to charge as high as \$10 per 15 eggs. Our yards are headed by and composed of our big string of prize winners at the state show, 1906, and the cream of our flock, the 500 birds raised last season. We will sell our very best eggs at \$4 per 15, \$7 per 30, and \$10 per 45. When you write for prices please describe and state fully the kind of birds you want, instead of asking us to describe, as we have so many inquiries to answer it is almost impossible. Then we are able to make you the price and guarantee them as such, or refund your money and pay return charges. Can you ask more? Sincerely yours,

KING BROS.

Oshkosh, Wis.

**"THE WILLETT IDEA"**

Preserves your eggs for many months with WILLETT'S WATER GLASS EGG PRESERVER just as fresh as the day they were laid. The only SURE way of preserving eggs to sell at high prices. Eggs preserved in Willett's Water Glass comply with pure food laws. If your dealer cannot supply you, write us direct and send his name. Agents wanted. Write for particulars and prices

ROOT BROODERS SUCCEED

The Poultry Men Know It—The Chicks Show It

THE ROOT BROODER is a success because it is a practical machine for its purpose—it is fitted to grow the chicks and develop them well. This picture tells the story. Observe how simple in construction it shows the "Root" to be. It is this simplicity that makes it a perfectly sanitary and cleanly brooder. There are no cloth parts to harbor disease germs—no extra fittings to make a harboring place for lice. The picture shows how the chicks get their warmth in the "Root" by coming in contact with warm tubes, the same as they are warmed by the mother hen when they come in contact with her warm body. The air in the "Root" is temperately warm, but is never confined and therefore always fresh. Don't make a mistake on this point. The chicks must have fresh air and plenty of it or they cannot live and thrive. Because of this cool, fresh air in the "Root" the chicks are gradually hardened off until their forces of resistance are equal to out-door conditions, while from the warm tubes they get the necessary warmth to promote growth and development. In all, The Root Brooders give the chicks a natural existence—a perfectly sanitary home; plenty of fresh air; warmth by contact; and sufficient room for exercise on a cool, sand floor. These are the reasons why the Root Brooder gives to the chicks all the warmth and comfort of the mother hen—which means much the hardest chicks—the kind that will make good breeders and layers. And this is why the "Root" can be depended on at all times, and why it does its work well under all conditions. You want just such a Brooder, and we are willing to let you

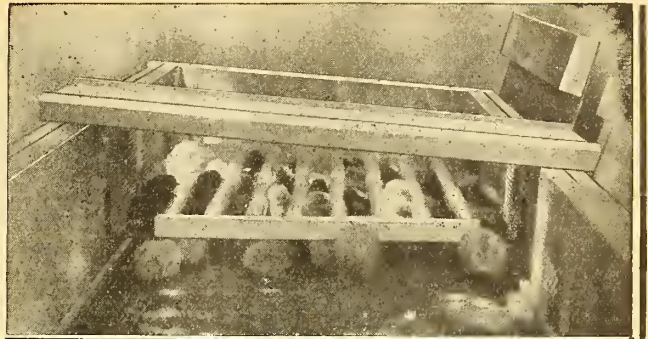

TRY THE ROOT BROODER AT OUR RISK

Root Indoor

When you buy a Brooder you should have the privilege of expecting a Practical machine, but when you buy the "Root," our free trial allows you to judge for yourself—on your own farm—and you are protected from any disappointment. From the day we commenced to make Root Brooders we have shipped them with the privilege of returning them at our expense if they were not satisfactory in every way. Why, now,

run risks and take chances when you don't have to? Why not write us to-day for our circular which tells all about the "Root"? We will gladly send you all our literature free. It will do you good.—Root Brooders are shipped direct from the factory freight prepaid.

Read what E. S. Grable, Poultry Judge and Originator of the Buckeye Strain of Barred Plymouth Rocks, says about the "ROOT."

CANTON, OHIO, Jan. 24, 1907.

THE ROOT INCUBATOR CO.:

Your Root Brooder contains more sensible practicable ideas than anything I have ever seen. I am sure it embodies the right principles for properly brooding chicks—for the first time in the history of brooder construction.

I have had 16 years experience in making hot water and hot air brooders, and have spent days and nights and weeks of hard work and study, trying to invent something that would brood young chicks to weaning age. Some of these were quite successful in rearing chicks, but almost required a licensed engineer to run them properly, while others required you to nearly stand on your head to attend to them.

I also tried a dozen or more makes of patented brooders. While some were much better than others they were as a whole far from satisfactory.

Your special feature of direct contact heat pleases me as it enables the chicks to breathe the cool temperate air, which is so refreshing and full of life-giving properties. Another special feature is the fact that the chicks can not possibly crowd.

The construction is so simple that no one can go wrong using this brooder, and it can all be taken apart in less than one minute, easily cleaned, and replaced again in a few minutes more.

I feel sorry when I see a fine hatch of thrifty promising chicks taken off, only to be doomed to death in some horrible old death trap of a brooder. I have visited hundreds of poultry plants in recent years and find they have been very successful in hatching chicks by the hundreds and by the thousands, but the raising of them is a different problem—so much so, that they only raise 25% to 60% of the chicks hatched. I firmly believe your brooder will be the means of 50% more profit to the average poultryman. Respectfully yours, E. S. GRABLE.

THE ROOT INCUBATOR CO., Dept. B, CLEVELAND, OHIO

THE RELIABLE RECORD OF 25 YEARS SUCCESS

1907

For twenty-five years the **Reliable Incubator** has been in the field as an artificial hatcher. From the start it has given splendid results, and maintained its place in popular favor during all these years. As a result of our twenty-five years experience in incubator building the **Reliable** at its Silver Jubilee today, is the standard of excellence in incubator construction.

If you are thinking of buying incubators or brooders just send for the **Reliable 1907 Silver Jubilee Catalog**.

SHIPMENTS MADE
SAME DAY
AS ORDERED

It's a handsome book of 136 pages and fully describes this peerless incubator. It's free, postpaid. A postal will do.

It explains the special features which make **Reliable** incubators famous as hatcher's the world over.

It explains the double heating system, shows how it preserves perfectly even temperature and how it is impossible for draughts and hot spots to occur in a **Reliable**.

It shows the system of ventilation employed and why gases and impure air cannot collect in the egg chamber.

It explains in detail **Why The Reliable Excels**.

We do not claim to make the only incubator that will hatch out chickens, but we do claim our machines are made upon practical lines—that they are successful hatcher's—and we guarantee them.

The best of skill, workmanship and material goes into every machine that we make.

We have the largest and best equipped incubator factory in the world, our workmen are experts and the **Reliable** is built right all the way

through. It is strongly put together, will not warp and with ordinary care will last a life time.

Reliable incubators are sold under the strongest possible guarantee. They are simple, practical and economical and can be operated on one-third less oil than any other.

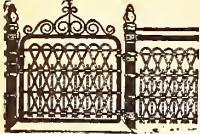

If you want a good incubator get the **Reliable**. This year, 1907, is our Silver Jubilee. On its twenty-fifth birthday the **Reliable Incubator** is at the head of the class. It is there because it has earned the right to be by fulfilling the claims made for it as a high per cent hatcher during all these twenty-five years.

It is a leader because it deserves to be. It does good work. It can always be depended upon, it is perfectly reliable. Don't take chances when you can get a **Reliable** for the same money with a record of twenty-five years practical success back of it.

Write today for the Silver Jubilee Catalog. Remember it is absolutely free. Orders filled the same day they are received. Also ask for prices on pure-bred poultry and eggs for hatching from the famous **Reliable Poultry Farm**.

What the Poultry World Has Been Waiting For

An Incubator in Which the Heat is Applied to the Top of the Eggs

This is Nature's way, and there is no other natural way. The eggs are surrounded by fresh air, moderately, correctly warmed. No hot box egg chamber; no burned out air; no feverish, thirsty chicks; no subsequent chills and bowel trouble. Largest hatches much the hardiest chicks.

You want to know about the incubator that supplies every condition that Nature supplies, and in the way that Nature supplies it.

You want to use the most convenient machine yet devised. Ours is a pleasure to

operate. With new self-supporting egg drawer, you never lift or carry a tray; you never spill an egg. Our thermometer arrangement is the handiest and best ever made.

You want to own the best constructed, most durable and finest appearing incubator made. It will never wear out. It embodies the best points of all classes of incubators in addition to its own exclusive features. The prices are right. The machine is guaranteed. You take no risk.

WHY Don't You

Build Your Own INCUBATORS

And Brooders? Thousands Are Doing It. Just Send for Our

FREE PLANS

And See How Easy and Simple They Are. We Furnish All Parts Such As Lamp, Regulator, Tank, Legs, Doors, Hardware, Etc.

HOW IT IS DONE

The first thing that occurs to many who read our advertisements, is that it is impossible for them to build their own machines.

This is a mistake.

If it were not we would not be in business.

Our business would not have grown to be the largest of its kind in the world. Our success depends upon the success of our customer.

Over eighteen thousand people became interested in our plans last year.

That is certainly good proof that anyone can build their own machines with our plans and fixtures.

Why not you?

You can, and we'll tell you why.

We have worked and studied on these plans and fixtures until we have made them so simple and easy that a boy 12 years old can follow them successfully.

Now we don't want you to even take our word for this. We want you to decide the matter yourself.

All we ask is the privilege of placing in your

hands at our expense a copy of our Free Catalog and Book of Plans.

If these fail to convince you, then we have nothing more to say and you'll be nothing more out.

We want you to see with your own eyes how clearly every step of the work is pictured out and described.

We want you to see how easy it is for you to build a high-grade, modern Incubator or Brooder, having many exclusive features (all in favor of the inexperienced operator) which are not to be found on any other machines made.

We want you to see how you can make a machine for less money than the same could be bought for if it were on the market.

If you are going to buy a ready made machine, don't do it until you have investigated these plans.

We furnish all the parts such as lamp, regulator, tank, legs, doors, hardware, etc., not possible for you to make, at a special low cost.

If You Have An Incubator

or Brooder, it will pay you to send for our Catalog and plans. It describes our latest improved

Acme Automatic Lamp and

Acme Compound Wafer Regulator which can be attached to any make of incubators and brooders, and which will save you one-half the oil and labor and all the annoyance so common with the ordinary lamps and regulators.

Here's some of the reasons:

Lamp holds over one gallon; top lifts off like bucket cover making it easy to fill. No funnel needed; no spilling or wasting of oil; safely filled when operating; can't be upset; no danger of fire.

Automatic valve keeps oil always same height on wick insuring uniform flame, steady heat.

Combined damper and flame regulation shuts off oil consumption when heat is not needed.

Acme Mineral Fibre Wicks do not burn or char—require no trimming. Acme Burners are air cooled—can't over-heat. No danger of explosion or fire. No smoke, no soot, no odor.

Acme Compound Wafer Regulators are sensitive and accurate to a fraction of a degree, also positive in their action; require but one adjustment, flame regulation does the rest.

Acme Lamps and Regulator are made to fit any machine. Sold singly or together. You ought to get this free catalog and read all the reasons why it will pay you to put on this lamp and regulator on your old machines.

If you have no machines don't fail to send for catalog and plans and get the right start.

HOW'S THIS

H. M. Sheer Co., Quincy, Ill. June 18, '08

Gentlemen:—I am sending you a photograph of the hatch which we got recently—86 chicks out of 90 eggs, which is 95.5 per-cent. Did any machine ever beat that?

This is our first experience with an incubator. It hatched 86 of the liveliest chicks we ever saw and as to care required and amount of oil consumed, it surely has no equal. After once properly regulated, it almost

uses human intelligence in caring for itself, using about 2 gallons of oil to complete the entire hatch.

Your fixtures can't be beat.

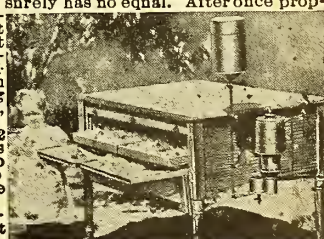

A. A. Wheeler, R. F. D. No. 2, New Lexington, O.

DALLEY & DOUGLAS

THE BEST IN WHITE PLYMOUTH ROCKS

We have several hundred breeding cockerels for sale and will dispose of them at \$3, \$5 and \$10 each. We will guarantee every bird, and if you are not pleased they can be returned at our expense and we will refund your money. We have a few pullets to spare at \$2.50 and \$5 on the same conditions.

The Dalley & Douglas White Rocks have been tested in the show room and breeding pens and we know they excel. We want your patronage, as it is necessary to our success. We feel that in being candid it will encourage you to have confidence in our every statement, be it through the medium of the AMERICAN POULTRY JOURNAL or our correspondence. Our birds are not perfect but are as near being so as it is possible to breed them. You will find them pure white in quill, and possessing the most glorious bay eye and low, evenly serrated comb you have ever seen. Their shape is that which you see in the winning birds in all the large show rooms.

We have 15 pens mated up and a selection of 15 eggs from these pens will cost you \$4, or 100 for \$25. We also have several other flocks (all the birds being at standard weight and good color), and eggs from these pens will cost you \$2.50 for 15 or \$10 per 100. We will be very glad to hear from you.

DALLEY & DOUGLAS, Box J, Flat Rock, Mich.

Orpingtons

1000 BUFFS, BLACKS AND WHITES. All farm grown. Show birds a specialty. They are now busy winning for my customers throughout the States and Canada. It's not the tone of printer's ink that should appeal to you, but what you get for your money. Now, if you want exhibition stock that will win the blue, or breeding stock scientifically mated to produce winners, all line-bred from our late Chicago and State Show winners. I positively guarantee to please you thoroughly. State quality wanted.

THE POULTRY BUSINESS.

The Breeding of Fancy Poultry one of the Most Profitable—Twelve Thousand Birds Sold Each Year at "Fishelton"—Success Can Only be Secured Through Extensive Advertising—A Word About Specialty Clubs.

Written for American Poultry Journal by U. R. Fishel, Hope, Ind.

I am often asked "what do I think of the poultry business as a business?" "is it profitable?" and many other questions along this same line. Having been in the poultry business for something like thirty years I have studied it in all its phases, passing through panics, etc., have sold as much as \$150 worth a year (thirty years ago), and now sell over \$40,000 worth of fowls and eggs of one variety, viz., White Plymouth Rocks. What do I think of the poultry business? I think it the very best investment possible. There is no vocation so healthful and no enterprise so profitable as the poultry business. Show me any investment of capital that will pay as large a per cent of profit as the poultry business. There is none.

To make the breeding of fancy poultry profitable one must first have a breed of fowls that are in demand; a breed of fowls that demand good prices; a breed of fowls that are being well advertised and pushed by the leading poultry advertisers, and no variety of fowls fill these requirements as do the White Plymouth Rocks.

In starting into the poultry business do not make the blunder so many make in putting all your capital in buildings, and when it comes to buying the poultry you have very little left. Good buildings are all right, but good buildings and a few cheap hens will not make any money for you, but good White Plymouth Rocks and cheap, warm, convenient buildings will make you money. No use talking, to make a success in the poultry business you must have poultry and not buildings. The old hen is what makes the money, not the buildings.

I am often asked, "How long will this fancy poultry craze last?" It is no craze, as some people term it, but a good sound business proposition. As to how long it will last, I would say just as long as there is a world. People want poultry for the table. In fact, no meat will take the place of chicken. The more people we have in this world the more poultry and eggs are consumed. Then why should not the poultry business get better, for there are surely more people every year. I really think the fancy poultry business, as a business, is just started and there are fortunes for many in the business if they will but get into it and carry on the business in a businesslike manner.

A few years ago if any one had said one man could sell annually upwards of 12,000 White Plymouth Rocks we would have thought them "crazy," but now we think nothing of selling this number of birds. What has made this possible? There are several reasons for it. First is, we devote our whole time to the business, looking after every detail of the business. We have 120 acres devoted to the one breed of fowls. With the assistance of six men we care for and sell 12,000 White Plymouth Rocks every year, they going to all parts of the world. How is it done? Could you visit "Fishelton," the largest specialty poultry farm in the world, you would see that every man has his part of the work to do, and does it promptly and cheerfully. There is no room at "Fishelton" for a disagreeable fellow. The White Rocks are cheerful and the man that cares for them must be so also.

I was asked once by a gentleman visiting me, "Why is it, Fishel, people want U. R. Fishel White Plymouth Rocks in

preference to other strains of this variety or other breeds of fowls?" This was easily answered. I asked him to point out to me another breed of fowls that had the excellent qualities so plainly stamped on them as did my White Plymouth Rocks; also show me another breed of fowls that had been bred for egg production and table use as had the U. R. Fishel White Plymouth Rocks. Take the male side of the Fishel White Plymouth Rocks, note the beautiful carriage of the birds, showing breeding or blood lines; also vigor and strong constitution. Note the broad, full breasts, the long body and short low tail. You will at once see why the popularity of my White Plymouth Rocks. In mating any variety of fowls one must keep in mind the male is half the flock; therefore, to make progress in breeding you must have a good male bird at the head of your breeding yard.

A visitor a short time ago said: "Fishel, why is it you get better prices than others in the poultry business?" I explained to him that people did not object to paying a good price for a bird if they knew they were getting the blood lines behind the bird to make him valuable as a breeder as well as a good individual. He at once recognized the fact that it paid to buy fowls that were bred right, just the same as buying well-bred cattle or horses. Blood will tell in poultry as well as anything else.

It is a pleasure to note results you get from a mating of line-bred poultry. When such excellent results can be obtained by buying line-bred birds then why fool time and money away on cheap haphazard bred stock, and then some people point to the failures in the poultry business? It is not the business that failed, it was the party's method of starting and way of conducting the business. Start right with the best stock you can afford to buy and success will crown your efforts.

I am often asked, "Does it pay to advertise?" I will spend this year something like \$13,000 advertising U. R. Fishel White Plymouth Rocks. Does it pay? To be sure it pays the fellows that get my money. Just like I heard Judge Henderson, of St. Louis, remark in an address at a banquet given the poultry exhibitors at the World's Fair. Mr. Henderson said: "Money in the poultry business, to be sure there is money in it, for I have put several thousand in it myself." But while the fellows that will obtain my \$13,000 for advertising are getting the money I am getting excellent returns from the investment or I would not expend so large a sum. In advertising poultry I have found it pays to advertise all the time, and when business is getting dull advertise all the more. When advertising always state facts and never mislead the readers. It is a pity that some poultrymen stoop so low as to bring personalities into their advertising. This belittles the one so advertising and casts a slur on all the poultry business. This is called disreputable advertising and soon puts the breeder out of business. Not long ago I noted a White Plymouth Rock breeder, or at least he called himself such, stating in one of his advertisements that his birds had won over a bird purchased of Mr. So and So for \$200, so naturally his fowls were better than Mr. So and So. This was investigated and revealed the fact that the bird in question was not from Mr. So and So's yard at all and no one had ever said \$200 was paid for the specimen. This proved the advertiser to be trying to belittle another advertiser and breeder by misrepresentation, causing the poultry buyers at large to mistrust the party, as well as all other poultry advertisers. Be honest and gentlemanly in your advertisements, as well as anywhere else, never resorting to such low, dirty methods as these. It don't pay. It belittles the poultry business. What we want in the poultry business is men of broad minds, and the sooner we can rid the business of these narrow-minded, selfish, jealous fellows the sooner the business, as a whole, will be benefited. There

by the originators of this variety thirty years ago. When the writer first saw Wyandottes in 1880 (they were then called American Sebright, Hambletonians, Sebright Cochins and by a half-dozen other different names) the feature that most attracted his attention was the strong resemblance of the male birds to the Dark Brahma cock in its sturdy shape, silvery top, heavily barred wing, dark breast and black,

WHITE WYANDOTTE COCKEREL.

Winner of first at Saratoga, Pa. Score, 95. Bred by W. W. Kulp, Pottstown, Pa. See ad in this issue.

well-spread tail. These characteristics are mostly found today, although we have drifted away from the dark breast and heavy black wing bar; but originally they were all characteristic of Dark Brahmas, whose blood played so important a part in the original Wyandottes.

"That first Standard for Wyandottes promulgated at the Worcester, Mass., meeting, in the absence of the real originator of the Wyandottes. Mr. Whittaker was wrong so far as the wing bar was concerned and helped to fix more permanently the heavy spangled wing bar upon Wyandotte males. It was at the Indianapolis meeting in 1888 that the lamented Ben N. Pierce and the writer labored with the association to convince it of its former error and succeeded. But the erroneous wings had been scattered all over the country in those five years and the strength of the combination of Dark Brahma and Hamburg blood made it most difficult to eradicate.

"The broad, loose comb of the Hamburgs, oftentimes tipping up at the rear, was another inheritance that worked against the Wyandottes, and the white earlobe of the Hamburg ancestry was also fixed in a painfully permanent way. These two Hamburg inheritances still reappear to our great chagrin.

"Another evil that has militated heavily against Silver Wyandottes was their immediate popularity. The 'boom' of the Barred Rocks was at its height in the early eighties. Whittaker and his compeers had been working for something with all the strong points of the Rocks and without their defects. The general public said, 'They have found it—here is the breed that will sweep everything before it.' Prices soared skyward. Every specimen with the least semblance of a Wyandotte, as pictured, brought fabulous prices, and the poorer specimens were kept at home as breeders and their eggs were sent broadcast throughout the country. Faults were fixed that years and years have failed to wholly eradicate.

"Almost equal to the damage done by unscrupulous American breeders was that done by the injection of English or half-English blood. In the nineties the open laced females then coming into vogue attracted the attention of English fanciers, and to emphasize their 'beauty spots'—back and breast—these females were mated in many cases with pure white Wyandotte males. To obtain one very open-laced female hundreds of off-colored females were cheerfully sacrificed. To correct the wide-cut evil very dark males were

next crossed upon them. Extreme colors in opposite sexes and the other universal evils of the double mating system quickly resulted.

"Some beautifully colored specimens, especially of the females, were imported back to America from England, likewise a few males. These last, while usually well laced on back, breast and thighs, were almost universally bad in shape, with black rings around their necks instead of a silvery hackle, and what was still worse in a breeding bird, they were nearly always possessed of 'cotton' undercolor instead of 'dark slate.'

"The writer has summarized briefly the causes that have made the breeding of Silvers so difficult. Even the very few who have adhered strictly to a strain, breeding year by year from selections of the best, have found it hard enough to secure a fair percentage of typical specimens, when upon their line-bred birds have been crossed the mixed blood referred to, the results have generally been very unsatisfactory.

"What, then, is the rule—the safe rule—for breeding Silver Wyandottes? Without any hesitation we put it in three words—follow your Standard. This means that you must avoid the following most palpable mistakes:

"1. Avoid extreme matings. Two extremes seldom bring a happy medium.

"2. Avoid the insidious devices of those who advocate double mating. If double mating is necessary our Standard is wrong. No fad of modern days has been used so successfully as a means to rob the dear people.

"3. Avoid a light or pearl eye.

"4. Avoid light undercolor. Study the neck and back of every male bird and if it contains white, spurn him as you would poison.

"5. Avoid as far as possible a secondary white edging on the breast and thighs of males and on these sections, also backs, of females.

"6. Avoid in both sexes, but especially in males, a

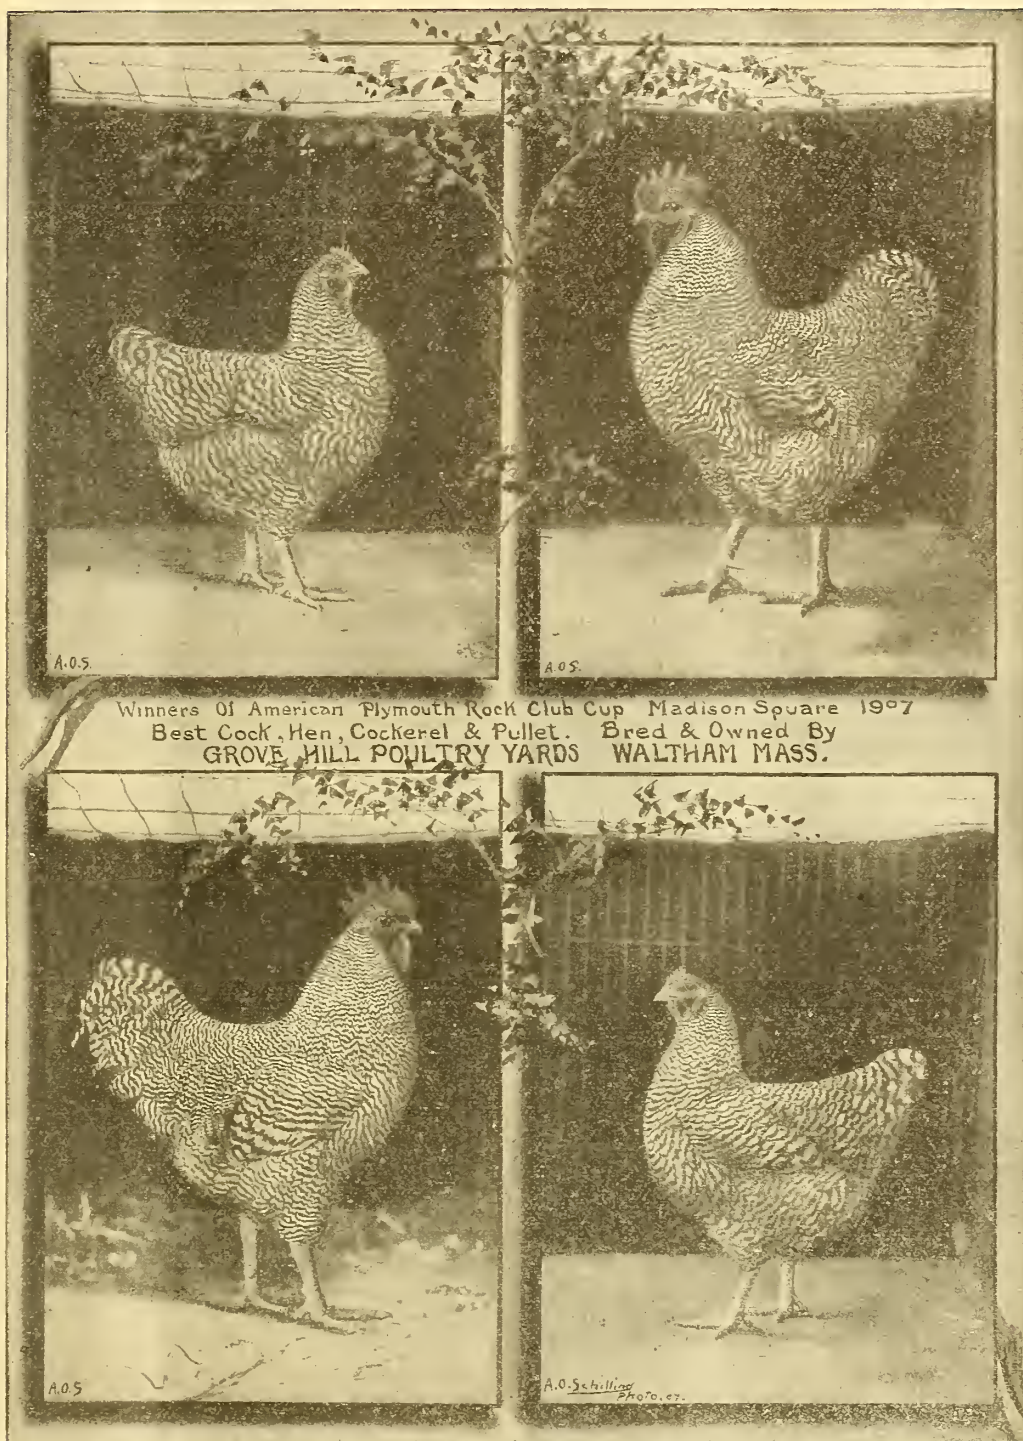

SINGLE COMB BROWN LEGHORN.

specimen long in the shanks and thighs, long in the back or with a high breast. Remember that the typical marks of a Wyandotte are a bird of curves with a low set keel.

"7. Avoid as far as possible any reddishness on shoulders or back of either sex. Remember that the colors of the Silver are pure white and pure black with an undercolor half way between, namely, a dark slate."

BARRED PLYMOUTH ROCKS.

Winners of American Plymouth Rock Club Cup at Madison Square Garden, New York, 1907, for best cock, hen, cockerel and pullet. Bred and owned by Grove Hill Poultry Yards, Waltham, Mass.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Mrs. M. B. Williams, Salisbury, Mo., and the second prize to Mary S. Andrews, Farina, Ill.

WHY CHICKS DIE IN SHELL IN INCUBATORS.

This subject has been discussed and "cussed" year after year in the poultry journals and by incubator manufacturers, and beginners with incubators and those who have never had any loss from chicks dying in the shells do not understand the causes for such a condition. It seems that if they have read anything on the subject prior to having actual experience it has passed from their minds, and the conclusion reached when they have such a loss is that the incubator is to blame. Incubators have no brains. It is simply a machine. While it is simple in construction compared with a locomotive, yet it must be understood the operator must know what is required in order to get successful hatches, same as an engineer must know what is required in order to run the engine. Incubators are very complete that are sent out, but it is difficult to send out instructions that will do for all seasons and localities. Climatic conditions

many who were running incubators. It seemed to be a problem not solved to tell the cause of chicks dying in the shell at hatching time. In 1906 I made that a special study; set hens same time that I started my incubators; tested every day until eggs were pipped. Many do not understand why they should cease turning and airing the eggs on the

BUFF COCHIN FEMALE.

Bred and owned by H. N. Hanchett, Jackson, Mich.

First and special prize Columbian Wyandotte cockerel at Madison Square Garden, New York, 1907, said to be the best ever on exhibition. Bred and owned by A. C. Hawkins, Lancaster, Mass.

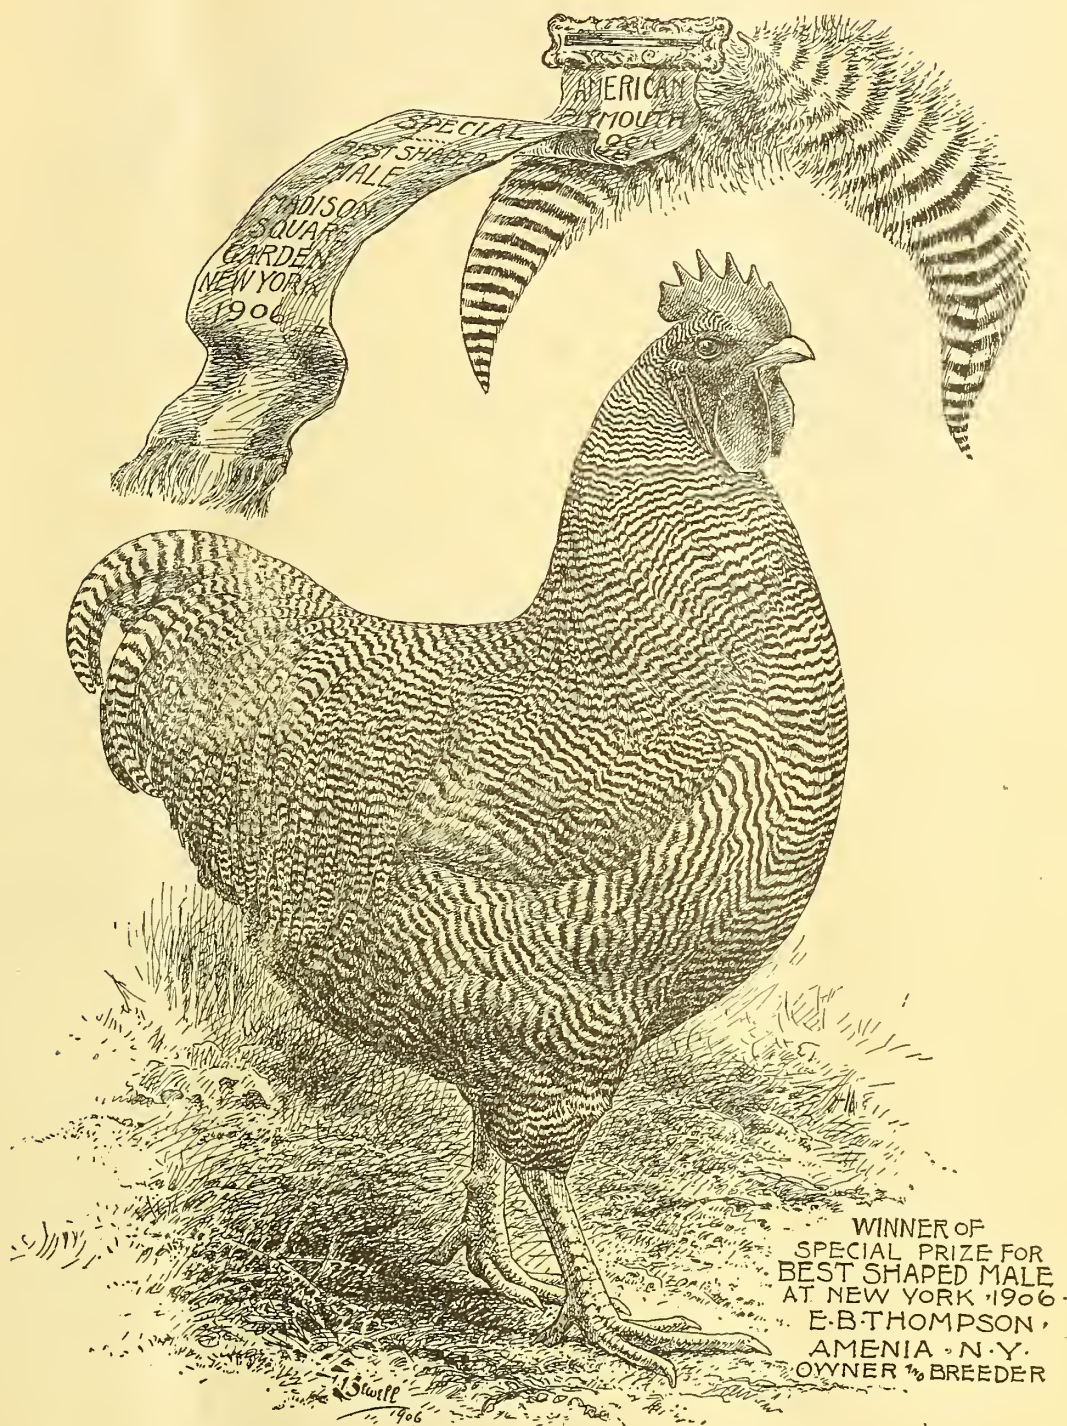

affect eggs in an incubator same as those set under a hen. There are many instances where persons have secured high per cent hatches.

My own experience has been dearly learned. I wrote to several incubator companies and inquired of and visited

eighteenth day. At this time the chicks are getting ready to pip the shell and turn themselves around so as to pip on the upper side of the shell first. Should the eggs be moved when the chicks are nearly ready to hatch, some of them will be left in a position with the chick's head on the lower side. If they pip the shell in that position the liquid comes in contact with the air and becomes glued in the opening and the chick can no longer move and in a short time dies. A person should be careful in removing the chicks not to move any of the eggs. All eggs that appear to be fertile are not hatchable eggs; some will not be strongly fertilized, therefore the germs will be weak. Chicks will start, but die in different stages, and if they are fully developed will be too weak to break the shell for lack of vitality from improper germ.

I run two incubators, experimenting for dead chicks in shells at hatching time. Set hot-air machine with 100 eggs, hot-water machine with 135 eggs. Both claimed no moisture was necessary, so I ran them without, side by side. Out of the hot-air machine thirty chicks, glued up, weak, and thirty-five dead in the shells; hot-water machine, 121 strong chicks out of 135 eggs. Set hot-air machine on another experiment; on the seventh day put hot water in moisture pan and every day filled it with fresh water; turned and aired eggs up to the eighteenth day; took cloth, two-ply, and put in hot water, put over eggs in tray, put back in the incubator, shut the door of the machine for ten minutes, then removed the cloth. It softened the tough skin in the lining of the shell so chicks could turn. Got seventy-five strong chicks out of 100 eggs; four or five dead in shell. I never paid any attention to the thermometer after chicks started to hatch well.

When chicks fill nursery they take up all the oxygen from the late hatched chicks, which causes many of them to die in the shell. Every incubator should have a trapdoor through which the chicks could be removed as fast as they are dried without disturbing the egg chamber, as all manufacturers have warned you not to open the door after the chicks have started to hatch. I took the chicks from the hen as soon as dry and found no bad effects from it. Test eggs after the seventh day once every day in order to examine the air cells and compare them with the eggs out of the incubator. The seventh, tenth and sixteenth days place clean, wet blotting paper on bottom of incubator; if it dries in twenty-four hours you need moisture. Do not be afraid of airing eggs too much. When turning eggs take two rows from the outer edge and put in center of tray; do it every time, and turn tray around every day. On the eighteenth day put

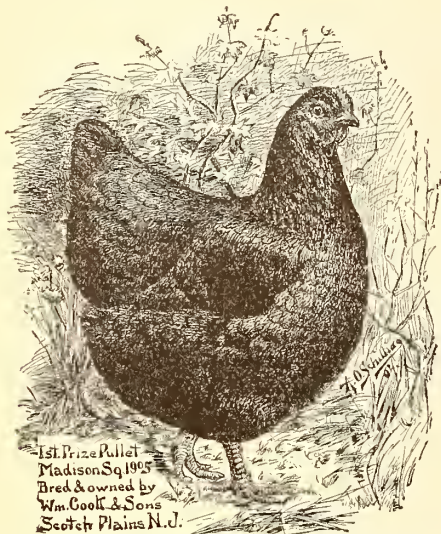

"RINGLET," BARRED PLYMOUTH ROCK COCKEREL.

Winner of American Plymouth Rock Club special prize for best shaped male at Madison Square Garden, New York, 1906. This bird was bred, owned and exhibited by E. B. Thompson, Amenia, N. Y., originator and breeder of the world renowned "Ringlet" Barred Plymouth Rocks. This bird is a great breeder of exhibition cockerels, and he and some of his best sons will head some of Mr. Thompson's best cockerel matings this season.

cloth out of hot water over eggs; place back in the incubator with the door shut for ten minutes, then remove cloth. Watch results.

When chicks get dry in the incubator the down comes off and gets all over the egg tray, and chicks walking and climbing over eggs not hatched smother the unhatched chicks to death. I had some last season dead in shell that pipped

but were strangled with blood. This I do not understand. Some say they had the same experience.

These must be your rules: Cleanliness, brains, patience, study nature of life producing, to run an incubator to have a successful hatch. I took the lesson, as most people are like the duck, kept all to themselves. The hen is the best advertiser on the farm; when she produces fruit she lets the whole barnyard know of her achievement—she advertises. Sometimes she does this in a way that wins applause of her sisters and they join in the announcement of what she has done, and even the rooster will crow in her behalf. Had you never noticed this? You hadn't? Well, you are not as observing as the duck that had faithfully stuck to business during the season and laid several dozen large, fawn-colored eggs, complaining that she was not appreciated. "See that hen over there. She has not laid as many eggs as I have, nor as large, but she has books written about her, verses composed in her honor, while nobody says a word about me." "The trouble with you," said a wise Rock cock, standing near by, "is that you do not let the public know what you have done. You lay an egg and waddle off without saying a word. My sister never lays an egg without letting all the neighborhood know about it." If you want success you must learn to advertise.

THE PRESERVING OF VALUABLE INFORMATION.

A notebook has been of great help to me in the poultry business. When I began three years ago to keep chickens I knew nothing whatever about them or their needs, so subscribed for one or two poultry papers and friends loaned me theirs, but there was so much information given in them that one new to the business could not attempt to remember it all. So a good-sized blank book was procured and under appropriate headings a note was made of every point that I expected ever to need, and have continued to do so ever since, reading the poultry papers with notebook and pencil at hand, or marking points to be noted later. It is much easier to refer to a notebook than to look over a pile of papers, and I wish to pass the papers on to friends. Of course, after reading the papers for several years some of the chief essentials of poultry culture have been absorbed, so that the notebook does not come into so frequent use; but on looking through it I notice many points that without it would have been forgotten long ago. The index includes the following subjects: Setting hens, care of young chicks, pullets, mating and breeding, White Wyandottes, houses, molting, advertising, shipping stock and eggs, feed, disease and lice, incubators and brooders. The following are samples of the notes under "Mating and Breeding:"

Work birds up to Standard all around, instead of one point at a time. Keep all the points in view.

Never use male for breeding under ten months of age.

One writer thinks that sumptuous feeding will produce more females, and spare feeding more males.

Fertile eggs are the result of maturity, vitality and comfort.

In small yards a male should have fewer females than on range.

If male and females both have narrow combs they may produce chicks with single combs.

Some prefer three-year-old hens to pullets for breeders. They think chicks are stronger and grow larger.

Breeding pens should be selected and mated early enough to become a perfect family—congenial and contented.

To produce laying strain breed from birds that as pullets began laying before Christmas.

General excellence in the strain is of much more importance than particular excellence in the individual. The general average of the flock is the real quality of the flock.

The bad effects of inbreeding are due more to lack of vigor of the parents than to close kinship.

Some think that flecks in plumage are usually caused by crossing strains.

Male should be selected with special reference to the shortcomings of the female.

To produce strongly fertile eggs some alternate males in breeding pens every day or every week. Some keep six males for four pens, and rest two and change all around daily.

For White Wyandottes do not pen more than eight or ten hens with one male.

Offspring will be more uniform if hens in breeding pen are full sisters and male somewhat related to them.

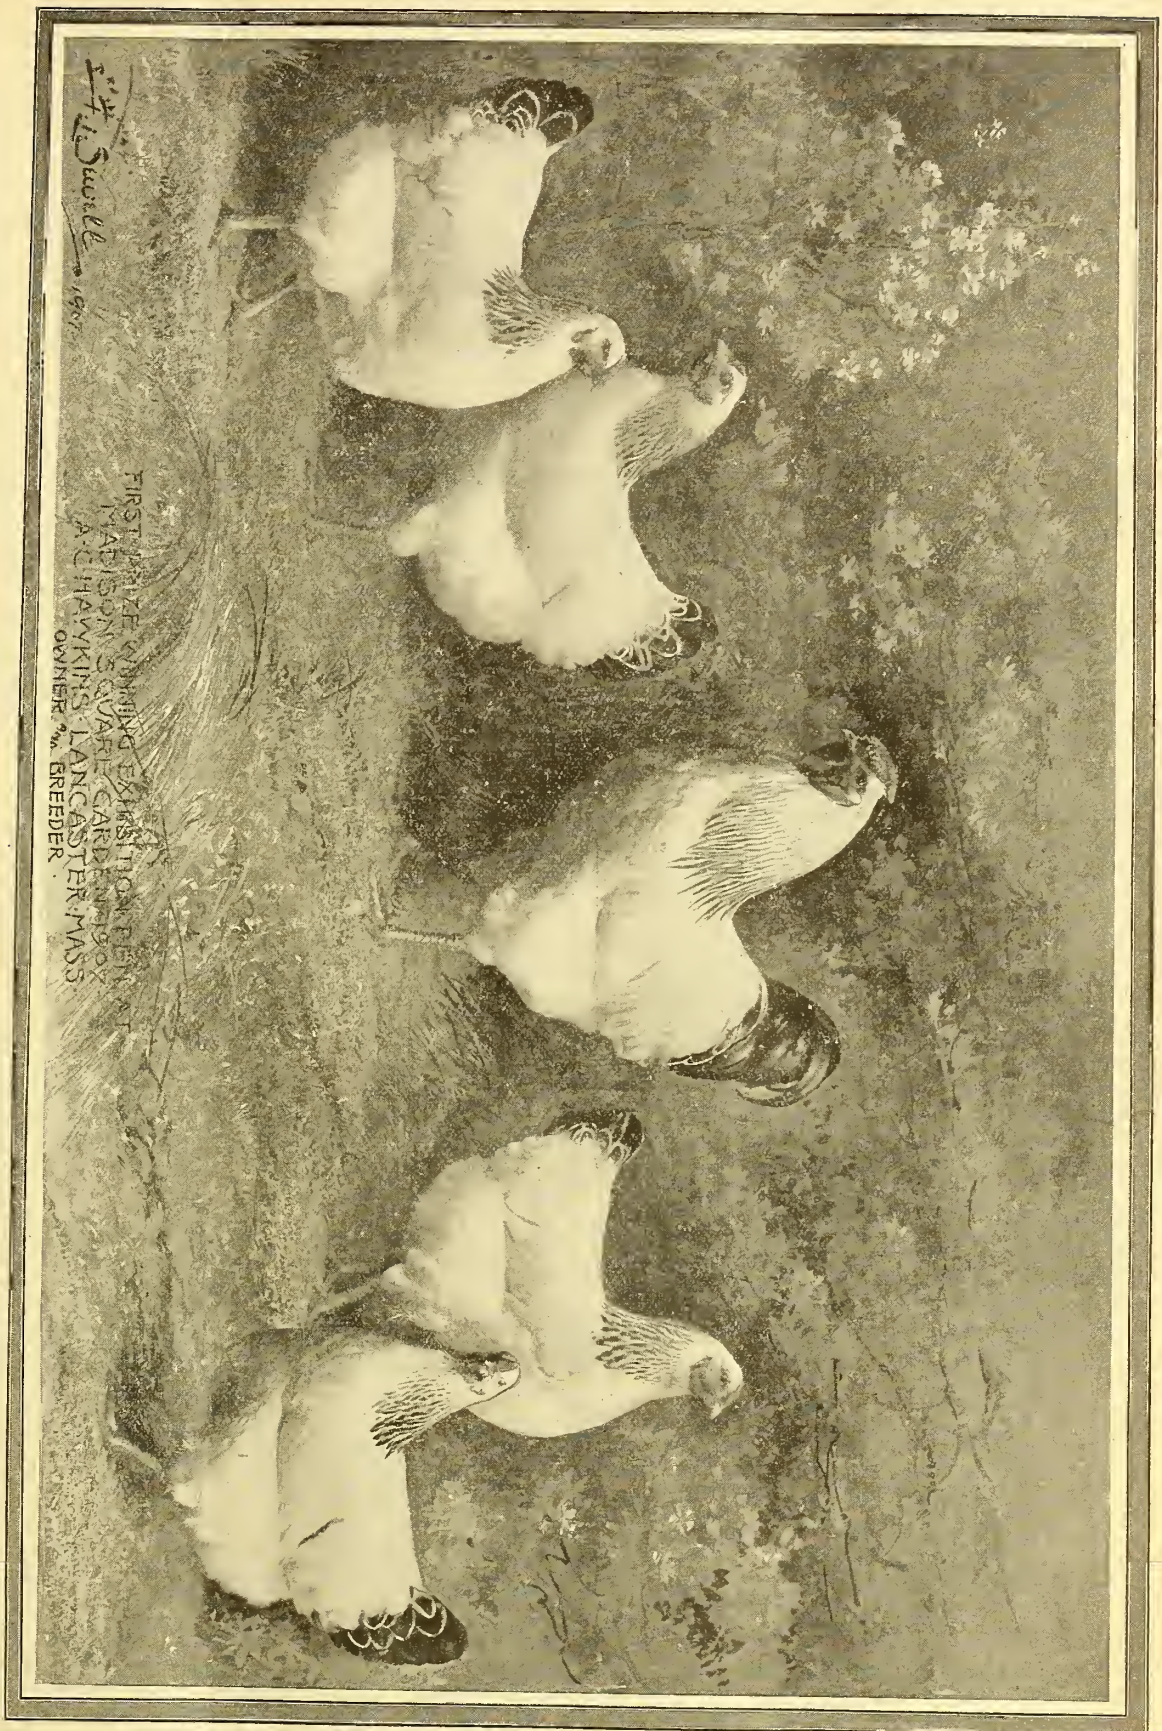

COLUMBIAN WYANDOTTE.

Third prize cockerel, Indianapolis, February, 1907. Owned and bred by Oak Hill Poultry Farm, 2053 Hillside avenue, Indianapolis, Ind.

A bird that loses its feathers in a week's time is more vigorous and better for breeder than one molting slowly. Molting time is a test of a bird's vitality. If she have any weakness it will show then.

Old breeding stock may lack vigor, and offspring resemble remote ancestors with their faults. Mary S. Andrews.

HARDY FOWLS.

Climatic Conditions an Important Factor in Building Up a Hardy Strain of Fowls—Close Confinement Weakens the Constitution of the Most Hardy Fowl—Forcing for Eggs Should not be Practiced.

Written for American Poultry Journal by Rev. C. E. Peterson, Penbrooke, Maine

"Inured to fatigue or hardships; strong; capable of endurance; able to withstand the cold of the winter" is the definition of the word hardy as given in the dictionary and comes pretty close to what we all seem to understand by the term.

But how to produce a hardy race of fowls is not so well understood, though it is the desire of almost every poultry breeder so to do.

Now it may be well to state in the beginning, before we go into details with our subject, that hardiness, like everything else in the constitution of both man and beast, is bred in the bone and cannot be obtained in any other way, and besides the breeding the environments have perhaps as much

COLUMBIAN WYANDOTTE.

Second prize pullet at Indianapolis, February, 1907. Owned and bred by Oak Hill Poultry Farm, 2053 Hillside avenue, Indianapolis, Ind.

to do with it, for hardiness in fowls generally is a survival of the fittest.

Climate plays an important part in determining whether a race of fowls is to be hardy or tender, for fowls may be raised in one part of the world that if introduced to a less genial climate would mean utter destruction and yet this important point is in very many cases overlooked by breeders of all classes and who have been breeding fowls for years.

It will matter very little if a fowl is brought from an uncongenial climate into one which is better, for it will simply further the interests of the individual as far as growth is concerned, but in time it will lessen the fowl's resisting power, and from hardy become tender, which would not be noticeable if continued in the same climate and under the same conditions.

But suppose that I should import a fowl from a southern state, in which the summer is very long, and where there really is no winter as we find it here in this northern part of the country where the thermometer registers forty degrees or more below, and quite frequently at that, and where the snow is covering the ground from November till March, what chance

of usefulness would there be for such a fowl? If he don't die before he gets acclimated, when he does his useful period will be over. And yet this very thing is done yearly, with bad results in almost every case and to the great detriment of the reputation of pure bred stock, for most all have the idea that they are tender and not very hardy.

If a little judgment was used in the selection of the climate from which the new breed, or the fowl to be used in improving the old breed we have been breeding for years, less trouble would occur from so-called tender fowls.

There is not a single breed that we know of that is not dependent to a more or less degree on the climate in which it is raised, as to whether it is to be called hardy or not, for in some men's hands the breeds that were classified as not very hardy have become strong, robust stock, but only after years of breeding and acclimatizing a variety that in the beginning almost refused to live.

It makes little difference whether this beginning was made by hatching eggs or from the stock itself, you cannot cheat nature; it is bred in the constitution and little by little the object is reached of producing a hardy race of fowls which is able to thrive and live under adverse conditions.

Now there are exceptions to this, but only when man steps in and takes the part of the weaker ones of the flock.

Quarters are provided where as much warmth as possible can be stored, and sometimes artificial heat is provided.

These tender, weak fowls that otherwise would have succumbed, but because of some desirable shade of plumage color, or other fancy points, is kept for future use, cuddled and nursed, and all the time the breeder knows that he is doing what is not for his best good, and future interest, but he hopes against hope, and by so doing year after year the percentage of weaklings grows larger instead of less, and he knows his flock cannot be called a flock of hardy, robust, livable stock, and all because nature takes its revenge every time on the person who trespasses its laws.

There is only one way to produce a hardy race of fowls and that is by mercilessly using the knife on every weak constitutioned fowl in the flock. This takes courage, but it is the only means of strength and vitality and hardiness of the future flock or strain.

Some fowls from some strains will not do well in any climate, whether it is congenial or not. Years of injudicious breeding have weakened the birds to such an extent that it is almost impossible to get a decent hatch from their eggs, and the chicks are weak from the start, and if, through much cuddling, they manage to live, it is only to perpetuate their own misery to future generations and final extinction of a once good and hardy breed of fowls.

There seems to be very little doubt in the mind of the honest investigator who is not moved to a different conclusion by mercenary purposes, that the increasingly large number of chicks dead in the shell, both in the eggs under the hen as well as in the incubator, is simply the results of a weakened constitution in the breeding stock, for these conditions are found to a much greater extent where injudicious and careless breeding has ruined and taken away the vitality of the flock than among the men who simply breed for utility purposes.

And no other result can be expected until hardiness of the flock becomes one of the dominant features, as well as to breed for feather, and increased productiveness will then be secured as well.

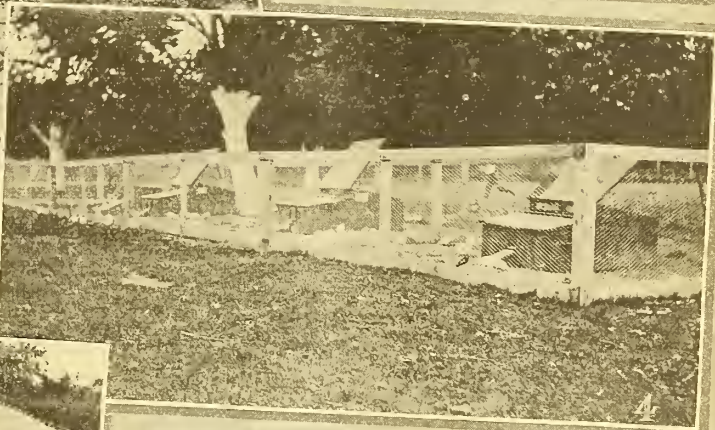

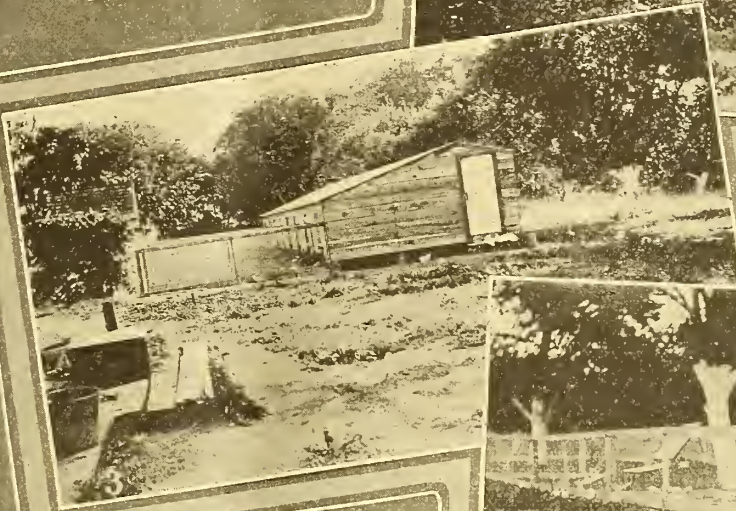

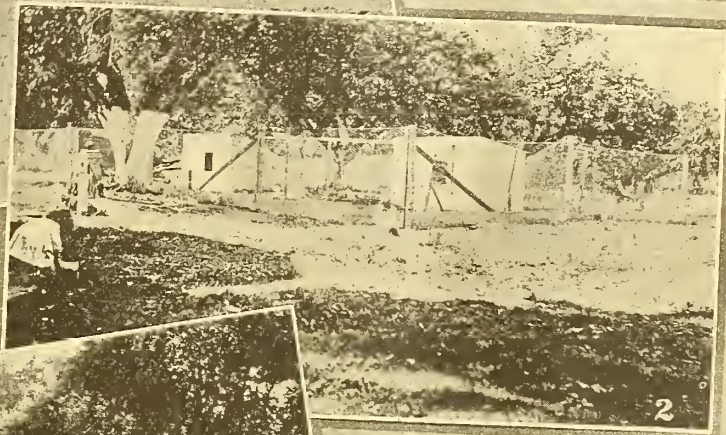

A great deal can be done by careful handling and careful breeding in the production of a hardy race of fowls, and this is well known by the few strains of fowls in existence in which the breeder made this matter a point of importance.

There is a great deal of too close housing for the production of strong vitality. We believe in plenty of fresh, cold air administered daily all through the year, summer and winter. If a fowl will not hustle and be busy on a cold winter's day, there is something the matter with it. It is not natural that it should stand around in some sunny corner shivering and with the feathers standing out from its body like the quills on a porcupine. If it is hardy and well it will be doing something, and simply for the same reason that the boys seldom know how cold it is during the winter—they are too active to find out.

It is the fellow toasting his feet all day long at the stove who generally complains over the weather, and it is the petted, cuddled and closed up in the house all day hen that hangs around doing nothing when once in a long while she is let out during the winter.

All that weakens the organism of the parents acts in the majority of cases debilitatingly on the descendants also, and this is particularly so where the hen is delicate, either because the ovum possesses little vitality or because the nutrition she has stored up in her egg is insufficient.

And when the parental germs themselves are possessed of

SCENES ON THE GREAT WHITE ROCK PLANT OF DALLEY & DOUGLAS, FLAT ROCK, MICH.

No. 1—Residence, with outdoor brooders, breeding houses and brooder house in the distance. No. 2—10x7 piano box houses in orchard. No. 3—Brooder house 75x16, 1,000 capacity. No. 4—Outdoor brooders. No. 5—Another row of piano box houses. No. 6—Babyhood.

inherited deficiencies in this respect it is not of much use to continue breeding from such stock.

And it does weaken the constitution of even a strong race of fowls to be in continuous close confinement, and we cannot but help to believe that if more of the open air life was given fowls in the winter that not only would their hardiness be insured, but the length of their usefulness as breeders much increased.

For a good many years we have pursued this course ourselves and so are in a position to know something about the matter, and this with the Houdan fowl, that in most all of our poultry books is classed as not of a rugged constitution, and this undoubtedly was true when first imported from France. We have never had a case of roup in our flock and do not know what it looks like in a Houdan. Our birds have roosted almost in the open from early spring till the snow began to fly, and all during the winter in a large house in which the doors could be swung wide open during the day, and which was regularly done, and a healthier flock of productive and active fowls I challenge any man to show me, North or South, and of any breed or variety.

We have no damp houses, no dripping wet walls, to induce sickness, and when our fowls cannot stand the cold of a brisk

the fowls and so deposited that they cannot get their wattles into it and freeze them, which is easily provided.

Then they should be shielded from any strong winds on very cold days; in fact, they will take care of that themselves if opportunity is so that they can get out of it.

It is also taken for granted that where the open shed cannot be had and where the poultry house is too small to afford enough room when the doors are thrown open, that the snow must be shoveled from off the ground and chaff or hay or straw scattered for them, which they will feel happy to turn over in their endeavors to find a few grains.

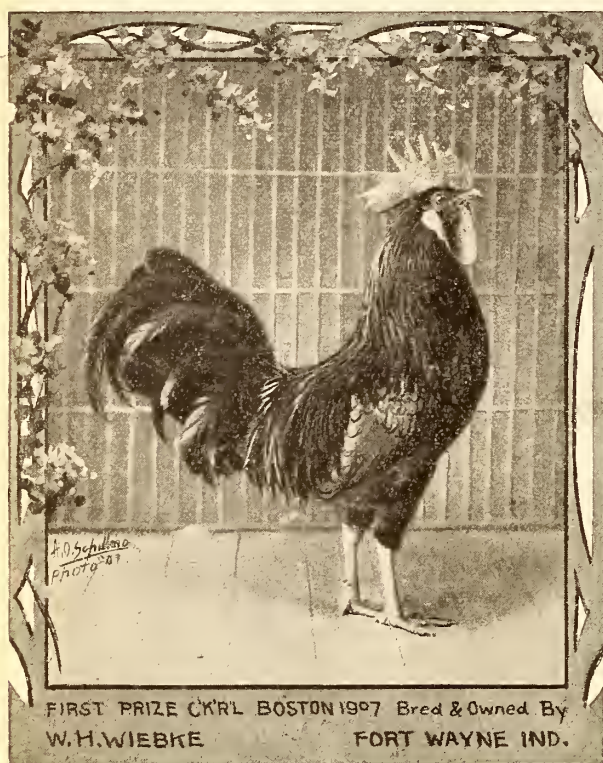

This is not as much work as it seems and where the welfare of the stock is the first consideration it is still less, for work of any kind is easy when our heart is in it.

Look after the comfort of your fowls and give to them the necessities of life, but don't cuddle, don't doctor, don't keep closely confined, don't underfeed, don't overfeed and without mercy kill every weak chick and every sickly fowl, and your flock will increase yearly in all the essentials that go to produce activity, vigor and productiveness.

BLACK MINORCAS.

One of the Leading Breeders of the "Blue Grass" State Gives the Readers of American Poultry Journal His Views of This Meritorious Variety of Poultry.

Written for American Poultry Journal by L. B. Ford, Somerset, Ky.

SINGLE COMB BROWN LEGHORN.

First prize cockerel, Boston, 1907. Bred and owned by W. H. Wiebke, Fort Wayne, Ind.

Maine winter day and feel good about it, it is time for that fowl to go somewhere else and it generally goes into our own constitution, as lazy, good for nothing drones are not tolerated on our plant.

Forcing for eggs is another source of a weakened constitution, and it should never be resorted to where the object is to breed fine fowls and of a hardy constitution. This will do for the market poulterer, but not for the breeder of fine stock, if strongly fertile eggs and strong chickens that will live and grow into a strong, sturdy maturity is the desired object. Then feed the birds on a good, wholesome ration of dry food and when hatching season comes to hand there will be plenty of good, strong, hatchable eggs and fewer dead chicks found in the shells.

Now with all this we do not mean that neglect will be conducive of good results, and no such procedure is meant by what we have just said, but we take for granted that it is easily understood that all the requirements in the way of good, sound food in abundance will be supplied, for increased hardiness means an increased power of assimilation, and for this very reason a healthy, active, hustling fowl will seldom if ever be found overfat.

Water should also be supplied in quantities sufficient for

Why is it that one fancier will take up the breeding of say, White Wyandottes, another of White Rocks, another of White Leghorns, while others select the parti-colored varieties, and some choose the black, buff, red and blue varieties? Now I believe it is generally conceded by all that the reason of this is that we have different tastes, and not because one breed is so much better or more profitable than any other breed. The writer is free to confess that it is partly so in his case. He has, in the past, successfully bred several of the most popular standard breeds; and yet his first love—the Single Comb Black Minorca—has so fascinated him always that it has finally crowded out the other breeds and now claims all of his attention, as he is breeding this variety exclusively. However, he has not selected this fowl altogether because it is the most beautiful and graceful of all the breeds to him, but partly because it has been the most profitable as well. The writer finds them growing rapidly in popular favor all over the country. He has shipped birds to all parts of the union and some to foreign countries. Nearly every mail brings me inquiries from far and near. The popularity of this breed was very strongly impressed upon me a few years ago, when wanting to infuse some new blood into my strain, I selected some of the noted breeders of this fowl, sending them inquiries for stock. Every one replied, quoting me prices, and some claiming large flocks in their yards. As it was early in the season I did not reply for about two weeks, when I wrote to each asking for more particular descriptions, and to my surprise every breeder except one had sold every bird that could be spared. Again I saw their popularity proven in another way. In and around my home town lived three friend fanciers and breeders. One was breeding the Single Comb Black Minorca, and White and Brown Leghorns, another Barred Plymouth Rocks, Light Brahmas and Silver Laced Wyandottes. To save advertising expenses they decided to pool their interests together in one advertisement in the American Poultry Journal. In their ad the Black Minorca had about the poorest place, and yet the Barred Rock breeder told me that most of their inquiries were for Black Minorcas, and said it was the "greatest selling chicken" he ever saw. Now this did not prove that these other breeds were not popular, for we all know that they are every one very popular. But I think it does go to prove that the Single Comb Black Minorca is in great demand, and that there is plenty of room for other breeders to take up this beautiful and profitable fowl to advantage.

To those who are not familiar with this variety let me say they are by far the largest of the Mediterranean breeds, the standard weight of the cock being nine pounds and hen seven and one-half pounds. To quote from the new Standard of Perfection: "They are distinguished by long bodies, very large combs, long, full wattles, large, white ear lobes." * * * "The Minorca head is carried rather high; the back is long and sloping." * * * "Their legs are firm, muscular and set squarely under the long, powerful-looking bodies." * * * "The lines of breast and body are well rounded, and the general bearing of the birds, male and female, is graceful, aggressive and commanding for their size."

Their brilliant black plumage, large, red combs and wattles, with large pure white ear lobes, make a beautiful combination of colors which is certainly very pleasing to the eye.

Minorcas are great foragers when allowed free range, and are always on the go from sun up to sunset. They do not take on fat so readily as the American breeds, and for this reason I find they do better under close confinement during the breeding season.

I have always found them to be exceptionally good layers, and their eggs are uniformly large and white. In fact I am sure their eggs will average much larger than the eggs of any other breed. A few years ago I exhibited at our county fair 40 Minorca eggs, which weighed exactly 130 ounces.

The little chicks are generally very hardy, great hustlers and are easily raised.

Now some will say: "Oh, yes, the non-setting breeds are great layers, but when it comes to having a fowl for the table give me one of the American breeds." For my part give me a Minorca always for a broiler or a roaster. As a table fowl they are excellent, being plump, juicy and sweet. They show an abundance of breast, which is as tender and delicious as the breast of a quail. For fancy, for eggs or for meat the Minorca is all that can be desired, and I am certain that this fine fowl has a safe future.

POULTRY BREEDING OF TO-DAY.

Anything That is Worth Doing at all is Worth Doing Well—Earnest, Systematic, Intelligent Effort Wins in the Long Run.

Written for American Poultry Journal by Mrs. Anna M. Lembke, Griswold, Iowa.

In no business are these old sayings more connected than to the poultry business. It has been too long a prevailing notion that anybody could raise chickens without any experience, knowledge or information about the work, and when a person of this sort has purchased his stock of chickens or other fowls and made a balk in the mismanagement and then failed, then he will howl and say there isn't much money in the chicken business after all. The fact is this: There is more profit in the poultry business for the amount of capital invested than any other occupation. But it must be carried on under the same rules that apply to all other flourishing enterprises and by one who has not only a thorough knowledge of the poultry business, but is willing to put his time and knowledge in the effort to accomplish the best results. The man who understands the poultry business by doing it undoubtedly learns it in time, provided he has brains enough, but we always pay a good price for our education in this line of business, a price that could have been much reduced had we taken the time and trouble to prepare ourselves for the work as we would for any other occupation. There are things to be considered. Yes, there are a great many things to be considered along this line before one fairly launches into the poultry business, be it man or woman. In many respects it is a woman's business, "so they say," but be it either they must have brains and business ability and these must be turned in the right direction by a course in some poultry culture. The common sense part is to stick to it, and to succeed, let come what will. Cleanliness—part and above all the love and instinct of the poultry business, as it demands patience and tact, as this business seems to be overpowered with people who seem to think the fowls should possess a higher intelligence than they do and such a breeder generally makes a failure. Eternal vigilance is just as much the price of success at poultry raising as it is of liberty. How often do we hear of thirty or fifty little chicks dying in a single night in a small brooder, just for the lack of attention. In other words, carelessness. How many times do we hear of small chicks killed off by the hundred by allowing lice to suck the life blood out of the little things. "Only carelessness." Does it not disgust you? The echo answers, yes. The poultry breeder of today who does not make an effort to improve the quality of his flock and to improve his methods of care and to raise the standing of his profession, is a gross failure, morally as well as financially.

Poultry breeding of today is a science more technical than that of any other animal. The keynote is knowledge, perseverance and self-control, and one who cannot control himself, how does he expect to manage his birds. He will make a failure. He must study his flock and understand their wants and appreciate their requirements. If not he will make a failure. If the best is worthy of the best the best of us should follow it.

Now the next consideration is the location of the houses and

yards. If the houses and yards are already located then the only way is to make the best of it in arranging your yards to make it as comfortable as possible for your flock, as well as convenient for you in caring for them. The best location for a poultry plant is in the country or in the suburbs of some town, although the backyard of a city lot can be made profitable for raising a few chickens if the work is properly handled. There are certain important necessities that must not be overlooked. The soil must be dry, fertile and loamy. If such be the case the ground will absorb all impurities and keep the yards in a sanitary condition, which means health to your flock. It is also important to get a place free from drafts, cold winds, etc., if possible, as roup, the most dreaded disease, is mostly caused by drafts. There should be trees and bushes of some kind on the land to provide for shelter during the hot summer days, as the fowls enjoy a cool shade as well as we do. An orchard is a great advantage. Poultry can have the run of the orchard, as they will not injure the trees, but will be a benefit, destroying insects, worms, etc. The breeder who has an orchard and neglects keeping poultry on a large or small scale is neglecting a valuable opportunity. It is an established fact that poultry scattered over the orchard at regular intervals are a value to the orchard, not only for the droppings which are scattered everywhere, but, as I said before, for the various injurious insects they destroy. They are afforded more exercise then when confined in small pens. When given full range they obtain more animal food of the right quality and obtain more shelter from winds and sun under the spreading boughs of the trees in the orchard than they could obtain from a scratching pen. In fruit time (or rather season) generally the birds are moulting and should be shut in small yards so that they do not in any way interfere with the gathering of the fruit. Fruit culture and poultry raising should go hand in hand. It takes no more land and the profit is much greater, and another great benefit is, free range for the fowls in the orchard, which is necessary if the best results are obtained. Thousands of good chickens are spoiled year after year for lack of room. There is no doubt that as many eggs can be gathered from hens in close confinement and fed egg-bearing foods as can be had from fowls having large range, but the expense and work is greater. It is impossible to get the same strength and vigor where the parent stock do not have suitable exercise, abundant fresh air and proper food, if one expects to remain in the business. This is the reproduction of his flock. A most important thing is plenty of good water and plenty of green food for the fowls during the summer season, and the birds cannot get overly fat from it. Another important consideration is selecting a location for your poultry farm, get near a market; the larger the better. A market that can be relied upon is of great value, as your customers can be supplied regularly with fresh eggs, which bring a good price, also your customers will take a regular supply of poultry that you wish to sell on the market; good prices being cheerfully paid for same.

How to begin? It is always best to keep the investment well within the limit until the business is on an actual paying basis. This is especially true if the poultryman is without experience, for by the time he gets the business on a paying basis he will know far better how to spend his money than when he began. It is better for inexperienced men or women (for women as a general rule make better poultry raisers) to start in a small way, not try to raise too many chickens the first year, as there is where a great many make a sad mistake by trying to do too much in the beginning when they don't understand the business thoroughly.

American Poultry Journal

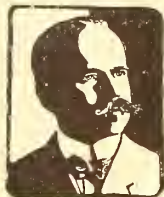

Issued the first of each month.

AMERICAN POULTRY JOURNAL PUB. CO.

GEO. G. BATES, Pres.

325 Dearborn St., Chicago, Ill.

GEO. G. BATES, Editor.

THOS. F. RIGG, Associate Editor.

J. W. BELL, Associate Editor.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of the time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

60,000 A. P. J.'s for March, 1907.

State of Illinois, County of Cook, ss.

Chicago, Feb. 23, 1907.

J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding sixty thousand copies of the March, 1907, issue.

J. G. BUDDE,

Subscribed and sworn to before me this 23rd day of February, 1907.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

As Indicated by the Show Room.

The show season of 1906-07 was a hummer. In the number of shows cooped throughout the United States and Canada this season is far and away the leader. In the thoroughly established exhibitions the entries were more numerous than ever before. This shows conclusively that the standard-bred poultry business is keeping abreast with the advancement of the times, and in the general forward movement of all industries it is in its rightful place. There are more and better standard-bred fowls in the country today than ever before—more men and women interested in the business, more capital invested.

The thoughtful observer who made the rounds of the show circuit during the past season found much to interest him. To him the signs of the times were as plain as the writing on the

wall. He found that in practically all the exhibitions the strictly utility breeds and varieties were nearly "the whole thing"; that farmers and market poultrymen met upon common ground, each breeding and showing those breeds and varieties which are most in demand in the public market as table poultry, and the breeds and varieties which by actual test have proven to be the best egg producers. The ornamental breeds were but little in evidence. All in all, it is a pretty good condition of affairs and a most natural one. The fancier and the market poultryman have been a long time in getting together, but are now in the same boat, where they rightfully belong, for it was the fancier who gave the world its best type of market fowl.

Both these branches of the standard-bred poultry business are on firm ground. The demand for stock and eggs will be greater during 1907 than ever before. Conditions are all favorable. Let every breeder give his matings thoughtful consideration; let him care for the season's crop of young stock the very best he knows how. The market for extra choice breeding and exhibition never has been—never will be—flooded. The men who produce this kind of stock and let the world know of it will this season reap a rich reward.

Our Grand New Plan of Colored Illustrations of Fowls.

We can safely promise that now within a very short time we will begin to present to our readers our magnificent line of illustrations which we have announced in previous issues. Every recognized variety of poultry, turkeys, ducks and geese raised in the United States and Canada will be presented to our readers in all their beauty of color, shape and marking. Our readers who are interested in securing these magnificent copies, whose subscriptions are expiring, should therefore see to it that their renewal is promptly sent into our office so that not one of the colored plates will be lost to them.

It is hard at times to transfer one's enthusiasm to a printed page. The more we see of this new color work of ours, the greater is our admiration and enthusiasm, and we wish every one of our readers to share in the benefits of this work.

A Matter of Great Importance.

Election Commissioner Fred L. Kimmy has sent out, pursuant to the new constitution, election ballot blanks upon which members of the American Poultry Association will record their preliminary choice for president, first vice-president, second vice-president, secretary-treasurer and nine members of the executive committee.

It need not be said that the selection of the gentlemen to fill these places should be made with great care. This is a self-evident fact and, too, a most important one. It was the purpose of the committee which framed the new constitution to so set the lines that as much of the political play as possible would be eliminated from each and every election campaign.

It is to be determined this year whether or not the American Poultry Association is to be a national repre-

sentative organization—representative of the great and important interests it claims to serve. The association is now in a position where it must either "make good" or lose the support, both active and moral, of the practical fanciers and breeders who have heretofore stood firmly with it. This fact is so evident that it cannot be, is not questioned.

Plainly, then, the duty of every member of the association is to carefully weigh the candidacy of each and every aspirant for place; to let politics severely alone in the making of his or her ticket and to record a vote for only men who can and will best serve the association.

Already the game of politics is being played in connection with the candidacy of several gentlemen. List after list of names have been sent out to the voters, each carrying with it the request, no matter how cunningly veiled, that the members vote entire the list as made up. The voters should frown down this attempt to hamper a free and unrestricted vote of the members. And we believe they will do so.

Our Colored Illustration.

We promised our readers that in our March edition we would present a colored illustration of the White Plymouth Rock cock, Edward B., Jr., bred and raised by U. R. Fishel, Hope, Ind., which he sold for \$500.00. We doubt if ever among all the colored pictures of fowls that have appeared in the past has there been a more perfect and strikingly handsome color work produced than is the one we present in this issue. It is without doubt the handsomest piece of color work that ever came from the hands of the artist and printers, and the readers of American Poultry Journal are to be congratulated that we were able to cooperate with Mr. Fishel and produce this illustration in American Poultry Journal.

This is a companion piece to Mr. U. R. Fishel's hen, Mary E., that appeared in our January issue.

Every dollar spent and every effort made by individual fanciers to advance the interests of their particular specialty is a direct benefit to this variety as well as a benefit to the breeders of every other variety. It is just such things as these that keep alive and make a steady, progressive business in the poultry fancy.

Mr. Fishel is an active, energetic man, who is not afraid to spend money, and is too industrious to have a single unoccupied minute. The influence of such men in the poultry field cannot be overestimated; their activity and energy give a life and impetus to the business that make success inevitable not only for themselves but for every other fancier engaged in the poultry business.

We are using every effort on our part to make American Poultry Journal the medium through which the highest success of the fancy in the United States can be attained. We are willing to spend money and are spending it in big chunks to give our readers the very best that can be produced, and we are confident that our efforts are being appreciated through the magnificent support that our readers are giving us. This we are confident is the result of our earnest endeavors to at all times present a publication that is useful and beneficial as well as highly artistic in its make-up in special features of illustra-

tions and reading matter. Many treats are in store for our readers in the near future, and we are positive that not a single issue will be a disappointment to any of our friends.

The Greatest Event in the Poultry World Today.

In the '70s the American Poultry Journal produced the first series of colored pictures of fowls. It was the pioneer in color work as in every department of endeavor connected with poultry journal publishing. Those colored pictures, viewed in the light of our accomplishments and opportunities today, were crude and inartistic, but they represented the then highest type of colored illustrations, and ran through nearly two years' issues of American Poultry Journal.

Many of our older readers will remember these illustrations and recall with what enthusiasm they were received. As we look back over the old files of American Poultry Journal in our office, it forcibly brings to our mind not only the advancement in the art of color work and illustrations, but also the great advancement that the scientific and painstaking breeder has accomplished in his improvement over the old requirements, which have resulted in the high ideals and perfection of thoroughbred poultry, as it now exists. These old colored pictures covered many of the recognized breeds and varieties at that time, and, contrasted with the efforts of the poultryman today, discover many new breeds added to the list and many new varieties to claim the attention of the fancier and the utility breeder.

We aim now to make another epoch in the history of the poultry business, and take infinite pleasure in announcing to our readers that we propose to furnish them colored illustrations, commencing early in 1907 issues of American Poultry Journal, of every recognized variety of poultry, turkeys, ducks and geese.

The work is tremendous in its scope, requiring the highest skill and the most perfect familiarity with every variety represented, will cost thousands of dollars, and we modestly hope and confidently expect that its influence will be far-reaching and its effect have a marked value in a still greater development and activity in the poultry world.

Never before in the history of the poultry business have all recognized varieties of poultry, ducks, geese and turkeys been pictured in colors and assembled in one harmonious uniform series of illustrations. Single colored pictures have from time to time appeared, but never has the opportunity before been

presented to the poultry loving public of seeing all varieties grouped together, perfect in shape, color, feather markings; uniform in size, and correct in comparative proportions, as American Poultry Journal proposes to present it.

Thousands of breeders have never seen all varieties, even at our largest poultry shows, gathered together; very few of our best breeders have ever seen all varieties.

This will be an object lesson of surpassing value and beauty. Never before has it been possible to have for comparison and admiration all varieties together; to note the almost endless variety of color and markings; to realize the beauty of hundreds of richly colored animated and life-like reproductions of the most beautiful of nature's creations, that make sportsmen of fanciers and that attract men and women from every walk in life who realize a delight in moulding and developing into higher grades of beauty and utility this form of bird life, that is, more than any other, susceptible to high ideals of perfection.

If we, as beauty lovers of a dozen varieties, become enthusiastic fanciers, how much greater will be the delight to see all the varieties together, perfect in shape and color. Few, even of the most experienced breeders, are thoroughly familiar with all varieties. What then, will be the effect upon the beginners? These colored pictures of American Poultry Journal will be an education so far-reaching in its effects that their value to the poultry business can hardly be estimated and will charm and captivate the fancy of thousands who have thought of them as "just chickens."

This will be a work so great in its scope and grand in its possibilities that every breeder in the land will benefit by its publication, for his favorite will be represented, his choice of variety will be found before the series runs out and his business be boomed by the publishing of this colored index to the greatest fancy that interests the people of the world today.

This series will consist of nearly 300 specimens, male and female of each variety. The painting will be done by the world's greatest poultry painter; will be reproduced by the latest method of color work, on heavy enameled paper and will appear in American Poultry Journal until the series is fully completed.

This work has been contemplated by us for years as the culmination of our hopes and ideals, and has been in active course of preparation for nearly a year. The first pictures will soon appear. The issues of American Poultry Journal will be limited to 60,000 copies each month, so renewals of subscription will be necessary to secure the complete series.

Our Colored Cover.

We have many requests from our readers that we again reproduce the colored cover of the pair of Barred Plymouth Rocks that we used something over a year ago. At the time that this first appeared it was universally expressed by leading Barred Plymouth Rock breeders that this was the finest illustration in colors of this variety that was ever produced. It is perfect in shape and markings and coloring, of a striking individuality, and an illustration that can be treasured for years by every lover of the Barred Plymouth Rock. We take

pleasure, then, in again offering this to our readers in our series of colored covers that we have been running for many months. New varieties will continue to appear in colors on the front cover each month.

We appreciate the spontaneous and voluntary praise that has been given this illustration and take pleasure in again presenting it to our readers, as well as giving to the many thousands of our new readers, this, a special treat.

Renew Your Subscription.

At this time of the year many thousand subscriptions are expiring, and we wish to call the attention of the reader to this fact, urging that a prompt renewal be made in order that they may not lose any issue of American Poultry Journal. Our circulation is limited to an average of 60,000 copies monthly, and when these are all used it is impossible for us to furnish any back numbers. Therefore those of our readers who are desirous of keeping complete volumes of American Poultry Journal should look to their subscription and renew it promptly.

A Correction.

In the ad of the Grove Hill Poultry Yards, Waltham, Mass., in the February number, on page 128, the printers made a serious blunder. Underneath the cut of the Barred Plymouth Rock was the following: "Won first at New York four times during the last sixteen years, showing five times." This should have read, "during the last six years." This was purely an error of the printers, as the copy for the ad that Supt. A. C. Smith sent us was very plain, and he is in no way responsible for the error.

In calling this to our attention, Mr. Smith adds that the Grove Hill strain won seven out of ten of the best prizes on males at New York this year, and for the last two years have won the color special at the three largest shows in America on their strain, pure and unadulterated, with one exception, and that on a bird that was largely their strain. They won ten successive first prizes on cockerels, including such shows as St. Louis and Pan-American Expositions, Madison Square Garden, New York; Boston, Chicago and Philadelphia, and that two-thirds of the champion males in America's biggest shows for the last two years have been Grove Hill strain pure, with one exception, and that one was largely Grove Hill blood.

Individual merit should be recognized and the candidacy of Ross C. H. Hallock, of St. Louis, is a fitting testimonial of a man who has made good. In all the history of the poultry business no specialty club has been so ably advertised and put to the front as has the White Wyandotte Club, with Mr. Hallock as secretary. His efforts have been unceasing and results have been marvelous, as demonstrated by its great membership, and the striking popularity of the breed whose fortunes have been under his guidance. A promotion from his position as secretary of the White Wyandotte Club to the position of secretary of the American Poultry Association would be only just and fitting, and we confidently believe that the affairs of the American Poultry Association will be in splendid hands and Mr. Hallock will be crowned with an equal amount

of success in the new position. There is no man in the country to-day with a wider acquaintance or reputation than Mr. Hallock. He represents his ward as alderman in the city of St. Louis, which duties would not detract in the least from giving the time and attention necessary as secretary of the association, and as the constitution of the American Poultry Association requires.

The Cleveland Fanciers' Club Company show in January was a record-breaker so far as entries and attendance was concerned. So great was the attendance each afternoon and evening that the fire wardens found it necessary to close the ticket office daily. The Cleveland show has taken its place as one of the four national shows. The Cleveland Fanciers' Club Company, incorporated, is admirably officered. President Fred E. Pike, Secretary F. L. Gruhl and Treasurer Will C. Trapp were in attendance every hour of the show, seeing to it that everything moved smoothly. Notwithstanding the very liberal premiums and numerous cash specials paid this year the company has about \$2,000 in its treasury. They are planning great things for the 1908 show. These people fulfill every promise.

At the proper time an amendment to the constitution will be offered seeking to make the secretary-treasurer of the American Poultry Association an employee of the executive committee. This is a position which ought to appeal strongly to every business man within the association. We believe this amendment will be finally adopted.

If Election Commissioner Kimmey was not so level-headed and so thoroughly acquainted with the modes and methods of every politician within the American Poultry Association we would be fearful of the result—to the election commissioner.

The Cleveland Fanciers' Club by its president, Fred E. Pike, has sent a letter to each member of the American Poultry Association inviting his vote for Cleveland as the place of holding the annual meeting of the association for 1907-08-09.

Will the politicians who have sent out tickets to members of the American Poultry Association please tell us why the men they have named should be elected to the various offices? We would like to know, you know.

If you cannot be generous in the eggs-for-hatching trade, be just. This is one feature of the standard-bred poultry business that calls for a great amount of forbearance on the part of the seller and buyer alike.

The American Poultry Association politician who has not sent out a ticket to the dear voters evidently has a correct idea of his power or a high regard for the intelligence of the members. Maybe both.

Hon. E. R. Moore, representative from Lewis county, has introduced a bill legalizing the Iowa State Poultry Association, defining its duties and appropriating \$1,000 annually to foster its support. The bill is similar to the Nebraska bill, in fact this is the text

from which all state bills of this character are drawn. Mr. E. E. Richards, of the Western Poultry Journal, originated the movement, and if this bill becomes a law the fanciers of Iowa will be indebted to Mr. Richards.

Plant trees and shrubbery. Your poultry will approve of it, and you will be doing something which will not only benefit yourself but those who are to come after you.

Tickets, tickets. What are you going to do with all your tickets?

THE POULTRY PRESS REVIEW.

Farm Poultry calls attention to the fact the Rhode Island Red Club is running the Club Standard in Red Hen Tales, this being but slightly different than the Standard as found in the Standard of Perfection. Farm Poultry wants to know what the American Poultry Association is going to do about it. Nothing, of course. The association, in session at Auburn, made it clear that it was heartily in favor of protecting its own, when it did not have to fight to do so.

Poultry announces that hereafter it will not issue special breed numbers. Poultry is not the only Columbus who discovered the spring-trap in connection with these special editions.

Rev. Farrer, of England, who has produced more high-class Hamburgs than any other breeder in the world, tells Poultry (London) that he has never bred from a pullet. The pullet-cockerel

mating is what is bringing failure to many American breeders annually.

The English journals are having no end of sport with the new spelling reform which President Roosevelt tried to have here adopted. Of course "Mr. Jungle," of Poultry, leads. He says: "The announcement that President Roosevelt is thinking of inventing a new American language cannot fail to cause consternation among poultry fanciers, many of whom either keep American laying strains, use American trap-nests, or have occasion to do business with people in the land where the potted dog comes from. I forget when the American language was last revised, but if it was more than six months ago I beg someone's pardon. What I should like to know is whether every new President is going to bring out a fresh language, because if so I begin to see that every international poultry fancier who wants to get his own back will have to join the Anarchists, or else bring out a new language of his own. I am told some of the leading poultry breeders of America hail the change with delight. One gentleman wrote me the other day that he was going to build a new brooder house, and that he was giving up Brammers to go in for bard Roks. He also thort of having a fu wite Yan (mind the dots, Mr. Printer), and if he cood aford the kash he wood like to tri a pen of Alesbry dux. He sed he was feding his burds on mays, weet, and otes, and his cokrels and pulits ware duing so wel that he cood se them gro. He hopt I wood be able to reed his letr, but this was the nu nashonal spelling, and he

had forgotten all his English. I replied that he needn't mention it; that I ust to rite the nu Amerikin langwedje miself wen I was a litel buoy at skule, but I had almoast forgottten it. In fakt, the skulemaster ust to get sow angry wen i rote It that i hadd bene oblidged to giv it up, and to this da i had never daired to uze it. I sed I was glad to here his poltry where orl-rite, and hopt his chickens wud sune get over the rupe. Trusting this leves you as it finds me, &c., &c."

The Inland Poultry Journal thinks that show managers should have a card on each coop stating the breed or variety of fowls therein. Not a bad idea when we consider how little knowledge the public has of the classification of standard-bred poultry.

The New Zealand (Australia) Poultry Journal is of the opinion that the score card system of judging is better than comparison judging, and predicts that the score card will eventually prevail throughout that country. Never, so long as English fanciers are in control.

Feathered Life, London, quotes from an ancient book showing how they burned the candle at both ends in 1677: "My Lady Fanshaw's way of feeding capons, pullets, hens, chickens, or turkies, is thus: Have coops wherein every fowl is apart, and not room to turn in, and means to cleanse daily: and two troughs: for before that (sic) one may be scalding and drying, the

BROOKFIELD AND PALMYRA, MO., SHOWS.

The Linn County Poultry Association, which held its annual show Dec. 3 to 7 at Brookfield, Mo., of which E. J. Alexander is president and Dr. J. S. Hill is secretary, should be congratulated on the good management and the magnificent display of poultry on exhibition. The show was held in the De Graw Hall, conveniently located with splendid light on three sides of the hall. T. L. McDannald was superintendent.

One of the attractive features of the show was the drawing for two pairs of pure bred fowls of good quality donated by the different breeders of the association each day, one pair before noon, the other in the evening. Every person purchasing an admission ticket received a number with his ticket, a duplicate of which was kept by the association; this entitled him to a chance on the pair of birds for that particular half day. The duplicates were placed in a box, and some disinterested person would be called upon to draw one number from the box; the person holding the corresponding number would receive the pair of birds. These drawings brought out a good attendance morning and evening.

There were many good birds in competition in all the leading varieties, except the Light Brahmas. This once popular variety has of late years been neglected, many of the poultry shows not having a single Light Brahma on exhibition.

I had the pleasure of judging the Asiatic class, also the Orpingtons, Black Minorcas and Rhode Island Reds. The Black Langshans were a good class—some splendid cockerels and pullets. Most of the cockerels were in moult, necks and tails not being full. The first prize cockerel was a fine, large, nine-pound bird; scored 94; tail not full. First, second and third pullets were fine, large birds of splendid color. White Langshans a strong class; first and second cockerel both good shaped birds; neck hackle not full; second cockerel lost to first on color and shyness on toe feathers. First hen was a magnificent bird, snow white, well up on legs, fine back and tail; score, 95. First and second pullet both fine birds, scoring 95½ and 95, respectively. Buff Cochin class was not a large one, but quality good; first cockerel and first pullet were splendid, well-feathered Cochins, low down with clear wings and tail.

It is evident that the Orpingtons are growing in favor, the Buff and White being both big classes. In Buffs I found the best Orpington shape cock and cockerel to date. The first cockerel was a long, deep-bodied bird, short in leg—in fact, the best shaped Orpington I have seen. First cock was a big ten-pound bird of good shape; comb, however, being a bad one. Some nice hens shown; pullets a high class; first and second extra nice birds, but immature.

The first prize Orpington cock was a good white bird, slightly under weight; first cockerel a fine fellow, splendid comb, fine shape, trifle long in the leg. Black Minorcas a small class; first cockerel a fine bird, however; elegant comb, clear earlobe, fine breast and back, tail somewhat broken; score, 94 points.

The Barred, White and Buff Rocks; White, Buff and Columbian Silver Laced Wyandottes; Brown, White and Buff Leghorns, ducks, geese and turkeys were all large classes of extra quality and were passed upon by Judges Rhodes and Wales, but I did not have the time to look up the winning birds in these classes. Most of the awards were up the first day, and everybody was in

Ross C. H. Hallock, St. Louis, Mo., candidate for Secretary of the American Poultry Association.

good humor and the show declared a success. The splendid premiums of \$5.00 on breeding pen, and \$2.00, \$1.00 and 50 cents on single birds were paid promptly at the close of the show.

From Brookfield I went to Palmyra, Mo., where the Northeast Missouri Poultry Association was being held. Here I found another big show of fine birds; nearly every class full, except as at the former show, the Light Brahmas were missing. W. E. Rice is president; Miss Maud Bloomer, secretary, and A. B. Shaner, judge. Here I found a surprisingly strong class of Black Orpingtons of five entries with thirty-four birds. Some of these birds were hatched from eggs purchased of the most noted Orpington breeders in America and which cost \$15.00 to \$20.00 per setting. I made an exhibit in this class and certainly did not expect to meet so much competition. This variety is certainly coming to the front at a rapid gait. They are a splendid fowl, but need

much improving in color—too many white-tipped wings and too much purple barring.

The members of this association are a very enthusiastic lot of fanciers and just at this time are working hard to locate the Missouri State Show at Hannibal, Mo., for next winter. I was surprised to find so many lady fanciers at this show—the fact is, they appear to be in the majority and are certainly a jolly, good-natured lot of fanciers, and they know how to conduct a successful poultry show, and the secretary, Miss Maud Bloomer, knows the duties of her office and performs them well. The cards were footed up, premiums awarded and ribbons tacked on coops as soon as the judge finished a class. Score cards, ribbons and check for premiums won were forwarded to each exhibitor at the close of the show.

THE KANSAS CITY SHOW A SUCCESS.

The sixth annual show held at Kansas City, Mo., by the Kansas City Fanciers' Association, Jan. 15-19, 1907, was by far the most successful show yet held by that association in number of birds exhibited, number of birds sold and prices obtained, while the weather was the most unfavorable, yet the attendance exceeded all expectations. Many were the words of praise bestowed upon the management by the breeders present for the excellent treatment received, and each and everyone voluntarily promised to come back with a larger string of birds next year. Breeders are fast beginning to recognize the fact that, by reason of its being located in the center of the best poultry producing section of the west, Kansas City, is the logical point for holding the largest show in the West, and they like the "Kansas City way" of doing things. All ribbons were up on time and all premiums paid before the close of the show, and many exhibitors from a distance received their ribbons, score cards and checks before their birds returned home. The annual meeting of the association was held during the show and the following officers and directors were elected: President, H. H. Borgmann; first vice-president, W. T. Stark; second vice-president, G. M. Dewey; treasurer, J. C. Pickett; secretary, P. H. De Pree; directors, G. E. Tippie and W. M. Beal. Contracts were also closed with W. C. Pierce, C. V. Keeler, C. H. Rhodes, T. W. Southard and C. E. Fairchild as judges for the next show, to be held in Convention Hall the third week of January, 1908.

THE FIFTH ANNUAL EXHIBITION OF THE MINNESOTA FANCIERS' ASSOCIATION.

This show was held Jan. 23 to 30 in the new Hibernian Hall Building. It was undoubtedly one of the greatest shows ever held in the Northwest, and while entries were not as large as they should have been, quality was much in evidence. The popular classes were well represented and there were quite a number of "cracker jacks" on exhibition. Many sales were made, and as a selling center the Minnesota Fanciers' Show is as good as there is in the country. "Kicking" was not in evidence at all this year, and the feeling of good

U. R. Fishel, Hope, Ind.

Dear Sir and Friend: The cock bird received in due time and we are well pleased with him. He can hardly be improved upon. We are especially pleased with his comb, as that is what we need more than any other point. We have mated him with seven pullets and three hens, including our Prize Winners, and would not take \$300.00 for the pen. With best wishes, I am,

Your friend,

J. A. BICKERDIKE,
The Superior Trap Nest Man.

Wantagh, N. Y.,

Jan. 6, 1907.

My Dear Sir and Friend: Mr. —, of — Farm, who has been coming to my place all fall for Fishel pullets, won First Prize Pullet, all the Specials and Ivory Soap Cup for whitest fowl in show at Madison Square Garden last week. Pullets from one of your \$50 breeding pens have swept all of New York State and are in a class by themselves.

Your friend,

T. F. FITZPATRICK.

Jersey City, N. J.,

Dec. 18, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I have my neighbors beaten by a mile in the number of eggs I am getting. During the month of November fourteen pullets laid 135 eggs; up to the 16th of this month they laid 128 eggs. I am very well pleased with your fowls; they certainly are THE BEST IN THE WORLD.

Yours truly,

P. HUMMEL.

Lehigh, Kansas, December 12, 1906.

U. R. Fishel, Hope, Indiana.

Dear Sir: I took first prizes on my Fishel White Plymouth Rocks, and every one at the show thought they were just the thing. I intend to start a poultry farm with nothing but your White Plymouth Rocks.

C. F. GRAMBERG.

Muscataine, Iowa.

U. R. Fishel, Hope, Ind.

Dear Sir: I am well pleased with the birds I bought of you, winning first and third hen, first cock and first pen. I beg to remain,

J. O. MUCHA.

Greenfield, Tenn.,

Jan. 2, 1907.

U. R. Fishel, Hope, Ind.

Dear Sir: The White Rocks arrived in good time and in good shape. To say I am well pleased expresses it very mildly. I entered them at our show and won every prize on White Rocks. I am,

Yours very respectfully,
G. H. DREWERY.

Saginaw, Mich.,

Dec. 12, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I want to let you know the result of success with the eggs bought of you and from the pen gotten of you last January. At Jackson, Mich., I won first pullet, score 96, fourth cockerel and pen. I want some more birds for coming show.

Yours,

H. A. BECKMAN.

Mobile, Ala.,

Jan. 3, 1907.

U. R. Fishel, Hope, Ind.

Dear Sir: Last September I bought a setting of eggs of you and they reached me with one broken. I hatched ten chicks from the fourteen eggs, and would not take double the price paid for the eggs for any one of the birds. I want some more eggs soon. Let me know what they will cost me.

JOHN T. GLENNON.

Kurtz, Ind., December 30, 1906.

U. R. Fishel, Hope, Ind.

Dear Sir: I am very happy in the possession of the fine birds sent me, and I thank you very much. They are beauties and have been admired by every one. Book my order for a setting of eggs to be shipped in April.

I am, sincerely, LOUISE ARMBRUSTER.

White Plymouth Rocks

are conceded everywhere to be the most beautiful and profitable fowl there is, and are justly called the MONEY MAKERS. I have something over SIX THOUSAND FOR SALE. No matter what you want in poultry—Selected Breeders or Utility Flocks, I can supply you. Remember I have over two thousand selected cockerels from \$2 up. Do not place your order until you see my new 56-PAGE CATALOG; send two dimes for a copy. Worth dollars to any one interested in poultry. The printers were a little slow in getting the thirty thousand printed, but they are ready to mail now and I want you to have a copy. My yards are mated up and I have the best lot of breeders mated I ever owned—you know what that means. Write me.

25 Per Sixty

U. R. FISHEL
BOX A HOPE, INDIANA

You can positively make hens lay the year around if you will give Dr. Hess Poultry Pan-a-ce-a with the regular feed. During this season of the year many valuable layers are idle. In other words, the egg factories are closed down on account of impaired machinery. Poultry Pan-a-ce-a contains the best tonics known to medicine for increasing digestion, which is the all important function in egg production. This superior poultry tonic supplies iron for the blood, cleanses the liver, arouses the egg producing organs, reddens the comb and brightens the feathers.

DR. HESS Poultry PAN-A-CE-A

Is the prescription of Dr. Hess (M.D., D.V.S.), and in addition to increasing egg production, it cures cholera, roup, indigestion and many other poultry diseases due to digestive difficulties and infection. It has a property peculiar to itself—that of destroying bacteria, the cause of so much poultry disease, and throwing off impurities through the skin. Dr. Hess Poultry Pan-a-ce-a has the indorsement of leading poultry associations in the United States and Canada, costs but a penny a day for about 30 fowls, and is sold on a written guarantee.

START MAKING MONEY RAISING POULTRY--IT PAYS

You don't need a large sum to begin with. A few dollars wisely spent will start you in a pleasant, money making, healthful business of your own with a chance to grow as time goes on. Our new book, "Poultry for Pleasure and Profit" with full description of our chickens, ducks, geese, turkeys, etc., containing plans for poultry houses, disease remedies, etc., is now ready. It contains valuable information and is

A BOOK THAT TELLS HOW

and where to buy pure bred poultry. It shows 35 best paying, popular varieties, bred and raised on Delavan Poultry Farm. Orders filled promptly for any number of birds, either sex, pairs, trios or pens. For exhibition or breeding purposes. Every fowl guaranteed as represented or money refunded. Eggs for hatching guaranteed fertile and to reach you in good condition. Fine stock at reasonable prices. Book mailed for 10c postage. Write.

DEHAVAN POULTRY FARM,
F. E. R. Goetz, Mgr., Box 10, Delavan, Wis.

fellowship manifested by the outside fanciers made the show quite conspicuous. The association had a very large membership, but nearly doubled its membership this year and, with the exception of two, all the outside exhibitors joined the association. The show, while not the financial success it was last year, made good and will have about \$900.00 in the treasury. Messrs. George D. Holden, W. C. Ellison and John G. Osmundson placed the awards.

Plans are already being made for the next year's show, and the management expects to have a single cooping system. It also has the promises of several of the specialty clubs to show with it, and the finest show ever held west of Chicago will undoubtedly be held in St. Paul next year.

This association is the first association in the West to have held an absolute comparison show and, judging from the many manifestations of satisfaction on the part of the exhibitors, the system has taken very well. It took considerable nerve on the part of the management to run their show by the comparison system, considering the fact that all shows held in this territory

BUFF COCHON MALE.

Bred and owned by H. N. Hanchett, Jackson, Mich.

have been judged by the score-card method.

The officers elected for the coming year are: Nicholas Stronk, president; A. J. Fetsch, first vice-president; H. C. Wickey, second vice-president; Wm. B. Klein, secretary and treasurer; H. J. Goette, assistant secretary; George Kingsley, superintendent, and G. F. Gutz, assistant superintendent.

Breeders are solicited to correspond with the secretary, as nearly all of his time will be devoted to perfecting plans for next year's show.

A GRAND STATE SHOW.

The 1907 Nebraska State Show was held in the Auditorium at Lincoln, Neb., as advertised during the entire season of 1906. The press agent wants to take this means of thanking all breeders who sent birds to the show who had not been exhibitors previously. We were very much pleased to have with us a large number of new fanciers from both in and out of the state, and we feel that the efforts that have been put forth by the leading fanciers of the association to make this show something larger than a state show have been well rewarded.

This year the Nebraska State Show

lacked but 300 birds of having 3,000 head of pure-bred fowls on exhibition.

The new officers for 1907 are: M. M. Johnson, president; L. P. Ludden, secretary; I. L. Lyman, treasurer, and a new board of five managers. The dates for the next State Show are Jan. 20-24, 1908, and the judges will be Russell, Rhodes and Shellabarger, who have so faithfully served this association in the past. It is possible that two more judges will be added to take care of the growing exhibition.

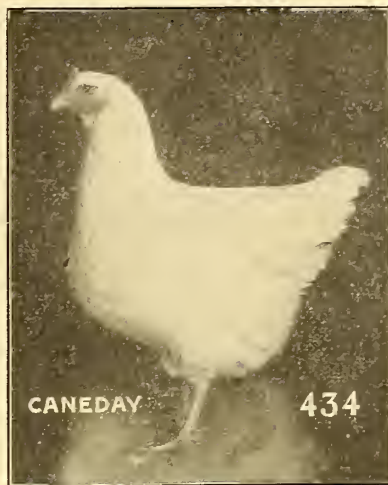

Breeders from Iowa, Nebraska, Kansas, Missouri, South Dakota, Colorado and Oklahoma find that this is one of the best selling shows in the West. There has been no larger exhibition in all the West this season than the Nebraska State Show.

A. D. Burhans.

FROSTBURG, MD., SHOW.

The first annual poultry and dog show was held in Moat's Opera House, Frostburg, Md., Jan. 15-19, 1907, under the auspices of the Western Maryland Poultry and Pet Stock Association, managed by the following officers: J. H. Holt, president; Joseph Holt, M. Bean, H. E. Wagus, W. R. Harris, P. H. Wagner, Ed G. Arnold, Claude Robertson and Frank Firlie, committee, and James B. Robertson, secretary. There were 665 birds on exhibition and about fifty entries of dogs. H. A. Emmel placed the awards by score card and gave general satisfaction to exhibitors and the members of the asso-

ciation. Poultry Success' trophy silver cup, given for the highest scoring bird in the show, was won by the first prize S. C. W. Leghorn pullet, she being a crackerjack. The gold special

White Plymouth Rock Hen, Favorite's great granddaughter. No. 434. Weight 9 pounds. Laid 41 eggs in 46 days. Bred by Victor D. Caneday, Box A. Taylors Falls, Minn.

given for the best dog in the show was won by the bitch Stella B., owned by an Afro-American exhibitor, who is a true born dog fancier and is right in the push when it comes down to qual-

ity and showing his dogs to the best advantage. The attendance was large and the door receipts netted the association a nice nest egg for their next show.

LANCASTER, OHIO.

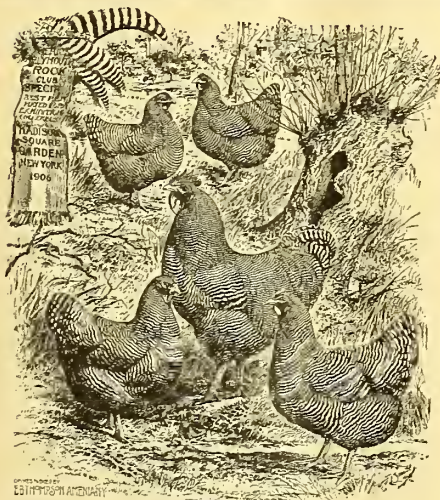

The Central Ohio Poultry Show, which was held Jan. 23-26, was a big success. All of the cash premiums, amounting to \$150.00, were paid in full at the close of the show. Over 600 birds were entered for competition. The high waters and cold weather kept some from shipping. The competition in several of the varieties was keen, several losing out by $\frac{1}{16}$ of a point. It is the intention of the association to double the cash premiums for next year and add a sales department, when birds may be sold and delivered at once. A kennel will also be added. All past exhibitors and new ones are welcome to be with us in 1908.

E. H. Roby, Secretary.

SHARON, PA., SHOW.

The second annual poultry show held at Sharon, Pa., Jan. 8-12, 1907, was a grand success, the hall being crowded, and the association was compelled to do some double-decking of coops. H. A. Emmel and A. F. Kummer done the judging, and their scoring was impartial and gave entire satisfaction to all. There were about 700 birds on exhibition, the different classes all being well filled. A large list of specials and sev-

"Ringlets" are the Imperial Birds

Winners of Special Prize for Best Pen Mated to Produce Exhibition Cockerels, at N. Y., 1906

The three most superb Barred Plymouth Rock Exhibition Pens on either hemisphere were exhibited by E. B. Thompson at the recent New York Show, Madison Square Garden, Jan., 1906; winning 1st, 2d and 3 special prizes on pens. The Harding Challenge Silver Cup for Best Pen, and the American Ply. Rock Club's grandest special prize for best pen mated to produce Exhibition Cockerels.

MY FIRST PRIZE SILVER CUP PEN WAS STAMPED WITH THE SEAL OF "RINGLET" PERFECTION

These three "Ringlet" exhibition pens were the most striking feature of the most wonderful array of Barred Rocks the annals of time record. They represent the cream of my long and rich experience. The sun never before shone on Madison Square Garden when the great building held three such matchless exhibition pens; they were the triumph of the Fanciers' Art.

My "Ringlet" cockerel at New York winning the American Plymouth Rock Club's special prize for best shaped male is a perfect "Apollo," the ideal Barred Rock Male of the New Standard of Perfection.

THE "RINGLET" BREEDING PEN WINNING the Club's Great Special offered for the best pen mated to produce exhibition cockerels, was declared to be the very acme of skill in mating, a revelation in the science of Barred Rock cockerel breeding. My matings made up of these great winners and their blood have produced this year the great winners for the coming winter's leading shows.

The enormous prestige of the "Ringlets" created by superlative quality has made them the standard by which all other Barred Rocks are judged

"Ringlet" Eggs Are The Best That Money Can Buy

Mr. E. B. Thompson, Amenia, N. Y.

Dear Sir: I take pleasure in thanking you for the setting of "Ringlet" eggs you sent me. One of the cockerels from these eggs has won many first prizes for me, and this winter at the Lindsay Show he won first prize, scoring 94½ points. I got one pullet from your eggs that was never beaten except by one of her daughters. I showed her at Lindsay this winter, winning first prize and all specials for best female of any age. She scored 95½ points, the highest score of any hen of any breed on exhibition. She was pronounced the most perfect Barred Rock hen ever shown. I again thank you for the high quality "Ringlet" eggs you sent me. Yours very truly,

Burnt River, Ontario, Feb. 15th, 1906.

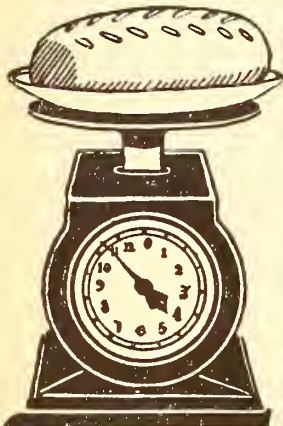

Joseph Harper.

Richly illustrated 48-page catalogue upon request; it is full of illustrations of New York winners from life. Elegant exhibition and breeding birds for sale in any numbers. Eggs from Finest Exhibition Matings: One setting \$5; two settings \$9; three settings \$12; four settings \$15. See my ad on back cover page.

1 $\frac{1}{2}$ more butter 1 lbs.

If you can increase your butter production without any increased cost or any more work won't it pay you to do it? And if you can get more butter from you milk with **less work**, that will be still better, won't it? That's exactly what you can do if you will do as Mr. LEITING did—buy a **Sharples Tubular Separator**. Here's what he says about the Tubular:

MORE BUTTER MORE MONEY

gets all the cream there is in the milk, does it so easy that it's not work to run it at all, and is so simple, with only one little part in the bowl to wash and keep clean that comparison is out of the question.

The extra cream it gets makes the **Tubular** a regular savings bank for its owner.

All the other good money-making points are told in book F-205, which you ought to read. Write for it today—we'll send it free to you.

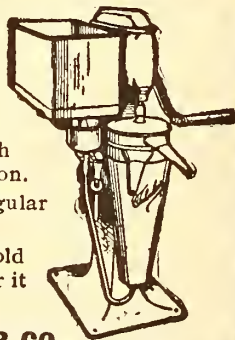

THE SHARPLES SEPARATOR CO.,

Toronto, Can.

WEST CHESTER, PA.

Chicago, Ill.

The Sharples Tubular Separator

Randolph, Nebraska, Feb. 15th, 1906.
Gentlemen:—On the 23rd day of January, 1906, I took a No. 4 Sharples Tubular Separator on trial. On learning that I was in the market for a cream separator, the agent for the disc style "bucket bowl" separator brought one to my farm and requested me to give it a trial before making a purchase. After giving both machines a fair trial, I concluded to keep the Tubular as I consider it far superior to the other machine. It skims closer, runs easier, and is very much easier to wash, there being so many less parts. From three skimmings of milk from 7 cows, we were able to make 1 $\frac{1}{2}$ lbs. more butter with the Tubular than we could with the "bucket bowl" machine. B. LEITING.

eral silver cups were given in addition to the regular prizes. The silver cup offered for the highest scoring bird in the Mediterranean class was won by the first prize S. C. W. Leghorn cockerel, and this bird was good enough to make all the old-timers go some had he been properly fitted and exhibited at Madison Square garden. The S. C. R. I. Red breeders took off their hats to an Afro-American exhibitor who won first prize on cockerel. The officers of the Sharon Poultry Club are business men of the town (but true chicken fanciers), as follows: James W. McIntyre, president; J. W. McBride, vice-president; L. T. Gorham, treasurer; I. C. Gates, superintendent, and C. H. Ganchat, secretary.

EIGHTH ANNUAL MEETING OF THE NATIONAL WHITE WYANDOTTE CLUB.

The eighth annual meeting of the National White Wyandotte Club was called to order Wednesday, Jan. 16, at 4 p. m., at Mechanics' Building, Boston, Mass., with President W. R. Graves presiding.

Minutes of the last annual meeting held at Chicago were approved as read.

On motion the list of 538 new members, as recommended by the executive committee, were voted in as a whole.

The report of the treasurer was read and was accepted in connection with the report of the auditing committee, composed of Messrs. F. W. Corey and John S. Martin, their report showing the books of the secretary-treasurer to be in first-class condition.

On motion the communication from the Rhode Island College of Agriculture, in reference to an egg-laying contest, was laid on the table.

A communication from a member of the club, complaining of certain dealings with another member, was referred without reading to the executive committee.

It was decided to have the next annual catalogue gotten out in the same form as the 1907 catalogue, the members of the club being requested to send in various articles to the poultry and farm journals from time to time, and the secretary to clip these out and select the best and incorporate them in the next annual catalogue. Further details in regard to the catalogue were left with the executive committee.

The president of the club was instructed to appoint five committees, of three each, in the following sections: East, Central, West, South and Canada, the club to donate \$100.00 to each of these sections at a show in each section to be selected later. The various committees to swell this fund by solicitation of specials as much as they can, and to place the prizes as they deem best.

It was decided to offer cups in all states outside of those where the \$100.00 is offered, and that these cups be open to competition by any member of the club without regard to place of residence.

Motion was made and carried that the secretary-treasurer be allowed to draw on the treasury to the amount of \$250.00 in the shape of a donation.

It was decided that the cups in the various states having more than ten members be offered on best cock, hen, cockerel and pullet, the secretary to instruct how these prizes be awarded

GET THE RIGHT GARDEN TOOLS

It pays to get **Planet Jr** farm and garden tools. No other kind does the work so well or lasts nearly so long, because **Planet Jr**s are designed by a practical farmer and manufacturer; built of better steel, with better workmanship.

Planet Jr tools increase a man's capacity three to six times.
No. 25 Planet Jr Combined Hill and Drill Seeder and Double-Wheel Hoe, Cultivator and Plow. Simple and easy-running. In one operation, it opens the furrow, sows the seed accurately in drills or in hills 4 to 24 inches apart, covers, rolls, and marks out the next row. The hoes, cultivator teeth and plows are of high-carbon steel to keep keen wearing edge and are designed to hoe and cultivate exactly as needed.

No. 8 Planet Jr Horse Hoe and Cultivator will do more things in more ways than any other horse hoe made. Patented cultivating teeth and reversible hoes work the ground thoroughly, any depth desired, with perfect safety to plants. Expanding frame combines strength and simplicity; handles adjustable up and down, and sidewise. Plows to or from row, a splendid biller.

Write today for 1907 Catalogue of these implements, also Wheel Hoes, One- and Two-Horse Riding-Cultivators, Harrows, Orchard- and Beet-Cultivators—45 kinds in all. No matter if you already have some **Planet Jr**s, the new models are interesting.

NATIONAL S. C. BUFF ORPINGTON CLUB.

The National Single-Comb Buff Orpington Club meeting was held Saturday, Jan. 26, 1907, at the Chicago Show. A large and enthusiastic crowd of members was assembled. The grand list of specials, as well as regular prizes, offered by the club and the Chicago Show brought out a big entry of Orpingtons, there being about 175 birds in the class.

Officers were elected for the ensuing year. Dr. E. G. Cunningham, Goshen, Ind., was unanimously re-elected to the presidency; William H. Schadt was re-elected secretary and treasurer, Mr. Schadt's good work for the club being highly appreciated by the members; J. M. Williams, North Adams, Mich., was elected vice-president. Mr. Williams had the largest individual entry of any one exhibitor at the show. Members elected on the executive committee to act in connection with the president, vice-president and secretary were S. H. Shattuck, Covert, Mich., and Dr. Jas. Mathews, New Paris, Ind. Vice-presidents for every state and territory in the union are elected upon recommendation of the secretary. The club judges selected were W. E. Stanfield, re-elected, and C. S. Byers, of Hazelrigg, Ind.

The National Single-Comb Buff Orpington Club now numbers nearly

600 strong and expects to double its membership within the year. The club is looking forward to a still larger and better club show next year and has

H. A. EMMEL,
R. R. 31, Mars, Pa. An all around expert poultry judge, having had thirteen years' practical experience. At shows where engaged, if requested, will give daily illustrations and explanations on scoring birds of the different classes. Life member American Poultry Association.

already received flattering inducements to hold the next annual meeting from several large associations East, West and South, place of the next show to

be determined by the best inducements offered by any one association.

Undoubtedly the class of Single-Comb Buff Orpingtons brought out at the Chicago Show was one of the best ever brought together in the country. Rewards placed by Mr. Stanfield met with hearty approval.

AMERICAN WHITE WYANDOTTE CLUB.

The annual meeting of the American White Wyandotte Club was held at Madison Square garden, Jan. 2, at 4 p. m., President Horace Havemeyer in the chair. The minutes were read and approved, and treasurer's report accepted. After paying \$100.00 in premiums at the New York Show a balance is left in the treasury of \$54.32. Eight new members were voted in. It was left with the executive committee to offer ribbons and specials at such shows as they saw fit.

The officers for 1907 are: Horace Havemeyer, Stamford, Conn., president; Wm. W. Caswell, New York, vice-president; W. R. Graves, Springfield, Mass., secretary-treasurer; executive committee, A. G. Duston, South Framingham, Mass.; A. C. Hawkins, Lancaster, Mass., and F. H. Dillingham, New York city.

SIXTEENTH ANNUAL MEETING OF THE AMERICAN PLYMOUTH ROCK CLUB.

The sixteenth annual meeting of the American Plymouth Rock Club was held at Chicago, Ill., Jan. 26, 1907, with forty-three members attending, making one of the largest and best meetings ever held.

Resolutions were adopted recommending ex-President W. S. Russell for secretary and treasurer of the American Poultry Association; also one regarding further club work and

66 2/3% More First Prizes on Males than any other exhibitor has won on males not our breeding.

OUR LEE BELLE WON FIRST PRIZE IN EACH OF THE TWO LARGEST SHOWS OF the Season, and Again Demonstrated its superiority. It also won THE CHAMPIONSHIP PRIZE in the Strongest Female Competition of the year

Yours of 16th at hand and in reply would say, from your eggs I got 1st, 2d, 3d cockerel, scoring 93, 92 1/2, 92; 1st pullet, 95 1/2; 1st pen, cockerel 91, pullets 95, 94 1/2, 94 1/2, 94 hy Judge May. Mr. May said that the 1st pullet was one of the best colored birds he ever handled. I thank you for your fair treatment and believe you gave me the best you had, as you advertised. If this is of any use to you, you are at liberty to use it in any way you want.
1907 Geo. Booth, 10 Murry St., Barre, Vt.

(From Poultry Yards of W. K. Vanderbilt, Jr.)
Bradley Bros.,
Gentlemen:—I want to tell you how well pleased we are with the stock from eggs you sent us last spring. From the 20 eggs I raised seven cockerels and seven pullets, and every one of them is a good bird. Three of the cockerels are extra good; I have been offered \$25 for one of them. We bought 16 settings of eggs from four of the largest Barred Rock breeders, but didn't get one bird out of the whole lot as good as several we have from your eggs. Very truly yours,
1907 A. E. Wright, Mgr. Deepdale Poultry Farm, Gt. Neck, L.I. N.Y.

prizes to be offered in the future; also one relating to the borrowing and loaning of birds for exhibition; also for a 1907 club catalogue.

The officers' report showed a marked improvement in membership and a balance of over \$200.00 in the club treasury. Interest in the Barred Plymouth Rocks and their club is improving.

Officers for 1907 were elected as follows: President, Dr. O. P. Bennett, Washington, Ill.; vice-presidents, E. B. Thompson, B. S. Davis, Matt W. Baldwin, O. L. King, Newton Cosh, E. L. Miles and T. L. Norval; secretary and treasurer, H. P. Schwab, Irondequoit, N. Y.; executive committee, A. C. Smith, C. H. Welles, W. S. Russell, Charles McClave, C. H. Shaylor, R. W. Wales and A. C. Hawkins.

In our membership we wish to include every breeder and fancier of Barred Rocks and to have their name appear in our new catalogue.

Let me hear from you.

H. P. Schwab, Secretary.
Irondequoit, N. Y.

A NEW POULTRY ASSOCIATION.

In an open meeting held Tuesday, Feb. 5, at the Missouri Athletic Club, St. Louis, Mo., with forty-five poultry breeders present, the St. Louis Poultry and Pet Stock Association was organized and the following temporary officers were selected: Mr. Max Guckel, president; Mr. H. Stuhlman, vice-president, and Mr. T. W. Oreutt, secretary and treasurer. A constitution and by-laws were accepted. The association will be incorporated and capitalized for \$5,000.00. The object of the association is similar to that of other poultry associations in other large cities. Permanent officers will be nominated at each March meeting and elected at each April meeting. Stock in this association will be sold at \$5.00 per share, and no person will be allowed to vote on more than five shares.

This association will meet the first Tuesday evening in each month at 8 o'clock, p. m., at the Missouri Athletic Club. A committee will arrange for lectures at each meeting, and specimens of the various breeds will be furnished by the members for observation and discussion. These meetings will be extremely interesting and beneficial to all who are interested in fancy poultry.

An invitation requesting all breeders to attend these meetings extended through your columns will be greatly appreciated.

T. W. Oreutt.
St. Louis, Mo.

AMERICAN BLACK MINORCA CLUB.

The twelfth annual meeting of the American Black Minorca Club was held with the Boston Poultry Show, Jan. 17, 1907.

The secretary's report for the year was read at this meeting and was received with great enthusiasm because it showed the club to be in a better condition financially than at any previous annual meeting, showing good balance in treasury. Seventy new members have been added to the club during the year and only fifteen old members have dropped out of the club.

The club has offered ribbons in over 150 shows throughout the length and breadth of America and silver cups in every state where we had ten members.

The indications are that many more states will be entitled to cups for the shows of next winter.

The officers elected for the coming year are as follows: President, Frank McGrann, Lancaster, Pa.; vice-president, Hon. J. P. Hildorfer, Allegheny, Pa.; secretary-treasurer, George H. Northup, Raceville, N. Y.; board of directors, C. A. Thompson, Melrose, Conn.; Dr. R. W. Baker, St. Louis, Mo.; Geo. H. Dexter, Everett, Mass., and W. F. Lindenberg, Ft. Wayne, Ind.

Send 5 cents' postage for new catalogue of club to Geo. H. Northup, secretary-treasurer, Raceville, N. Y.

MEETING OF BUFF LEGHORN CLUB.

The annual meeting of the American Buff Leghorn Club was held at Detroit, Mich., Jan. 5, 1907, and was fairly well attended. It was decided to offer ribbons a little better than others are offering to every poultry show held next winter to be competed for by members only, also silver cups at the leading shows. It was decided to issue another catalogue, and those desiring their names in the same should join the club at once. A few 1907 issues are left and one will be sent free to anyone asking for it. The report of the treasurer showed that the club was in good standing.

The following officers were elected: President, B. W. Fellows, Mariette, Mich.; eastern vice-president, E. C. Wyckoff, Ithaca, N. Y.; southern vice-

president, Harry Bailey, West Point, Miss.; middle vice-president, W. M. Bean, Anoka, Minn.; western vice-president, Thos. Costain, San Jose, Cal.; secretary and treasurer, Geo. S. Barnes, Battle Creek, Mich.; executive committee, Thomas Peer, Fairfield, N. J.; Nate K. Cornwell, Thamesville, Ont., Canada, and Harry L. Haff, Beloit, Wis.

All breeders are requested to join the club at once and get their name in the next catalogue, which is sent free.

AMERICAN BUFF ROCK CLUB.

The annual meeting of the American Buff Rock Club was held at Boston, Jan. 16, 1907. The attendance of members was twenty-six, one of the largest ever held. Many matters of interest were discussed, a wider plane of action mapped out and more new work attempted. The membership has increased in the last year from 252 to 400.

The officers elected to serve for this year were: D. M. Green, Syracuse, N. Y., president; Geo. Fox, Torresdale, Philadelphia, Pa., eastern vice-president; D. J. Beinhart, Kennewick, Wash., western vice-president; J. S. Jeffrey, West Raleigh, N. C., southern vice-president, and C. A. Morton, St. Louis, Mo., secretary and treasurer. The executive committee consists of, in addition to the president and secretary, C. W. Fowler, Smyrna, Ga.; D. E. Hale, Prairie Junction, Minn., and Dr. C. W. Coolidge, Bristol, N. H.

Buff Rock breeders desiring to become members should send \$1.00 for membership. Information in regard to the club and its work can be had by applying to C. A. Morton, secretary, 510 Chamber of Commerce, St. Louis, Mo.

ANNUAL MEETING AMERICAN BUFF WYANDOTTE CLUB.

The American Buff Wyandotte Club held its annual meeting in connection with the Madison Square Show, Jan. 1, 1907.

This was one of the most enthusiastic meetings ever held in the history of the club. The secretary and treasurer's report showed a nice little balance in the treasury and the club in prosperous condition.

The following officers were elected: President, C. S. Mattisou; eastern vice-president, J. H. Scott; western vice-president, Simon Bueth; executive committee, C. S. Mattison, C. P. DeWitt, Calvin Hicks, J. B. Fieh and W. C. Ellison; secretary and treasurer, W. C. Ellison.

It is the intention of the officers to do all in their power during the next year to make the Cornish Indian more popular even than they are at present, and all breeders of the Indian are urged to join the club. The membership is only \$1 per year, and should be sent to the secretary-treasurer, F. H. Williams, Minneapolis, Minn., who will be pleased to answer all inquiries.

KANSAS STATE CORN SHOW ON WHEELS.

Unique Campaign of Missouri Pacific Railway Company and Kansas Agricultural College.

The Kansas State Corn Show this year was the most complete in the history of the state, for it was made by the state corn breeders and also by the boys of the state who entered actively into the contests. The State Corn Breeders' Association prizes brought out a fine exhibit of corn from the best

ROSE COMB BLACK MINORCA.

First prize cock at Chicago, 1907. Bred and owned by A. Dedricksen, Whitewater, Wis.

breeders in Kansas, and the boys of the state exhibited another fine lot of corn, which was grown by the boys of forty-seven counties.

The Missouri Pacific Railway, through its Industrial Department, desired to take this instructive exhibit to the farmers on its lines in the southeastern part of Kansas, and arrangements were completed by the agricultural agent of the Missouri Pacific Railway, who conceived the idea of carrying on this unique campaign of corn improvement. The Kansas Agricultural College was pleased to cooperate in making this undertaking a success. The college furnished speakers to go along and lecture on corn breeding, soil fertility, soil culture, and more corn from fewer acres. The lecturers were under the management of the Farmers' Institute Department of the Kansas Agricultural College.

The trip was a great success from the beginning. The farmers of Kansas are anxious for information that will help them grow corn of better feeding value and more corn from an acre, therefore they came out by thousands to see the corn and attend the lectures. Corn judging drills were held in the

Columbian Wyandottes

Winners at Danville, Ill., Cincinnati, Ohio, and Indianapolis, winter of 1906. At late Chicago Show, January, 1907, in one of the best classes brought out this year, I showed four birds, winning 2d cock, 2d hen, 3d pullet and two specials. Indianapolis, February, 1907, in the greatest quality show ever caged, I won 2d and 3d cock, 1st and 2d hen, 2d and 3d pullet, 2d and 3d cockerel and 2d pen. A few good breeders for sale. Eggs from six pens, all headed by prize winning males, \$5 and \$10 per setting. New mating list for stamp.

AMES PLOW COMPANY, 64 MARKET STREET, BOSTON, MASSACHUSETTS

forenoons at the different towns and the afternoons were devoted to lectures. Special stress was laid on the selection and testing of seed corn for planting, the preparation of the soil, the conserving of the moisture and fertility for crops.

This is probably the most practical way of arousing an interest in this subject that has yet been undertaken anywhere. And the idea of taking a State Corn Show direct to the farmers so that they could have an opportunity to study the best corn grown in the state is certainly a helpful one.

The several counties visited by the State Corn Show had in 1905 an aggregate corn acreage of 924,649 acres. If this trip with its lectures and exhibits can result in adding one bushel to the average yield in the counties visited it will mean practically 1,000,000 bushels increase in the corn yield in the eleven counties.

Twelve days, fifteen towns visited, 8,675 people passed through the car and 3,960 attended the lectures on corn breeding. In most places the meetings were held under the auspices of the local Farmers' Institute and elsewhere organizations were perfected.

Everywhere new enthusiasm was created for better corn and more to the acre and for boys' and girls' contests in corn raising and other work. The Missouri Pacific Railway Company and the Kansas Agricultural College have since October, 1905, worked together for nine weeks, covering practically every mile of its territory in Kansas.

LIGHT BRAHMAS COMING TO THE FRONT.

The grand old Light Brahmas are getting back to where they rightfully belong. They are to poultry as the diamond is to precious stones.

Yes, we are glad that the noble Light Brahma is being thought more of and raised more, after a lull of a few years in their breeding. When any breed is run to feathers, of course, after a while they will receive a setback that it takes years to recover, but it is now that our noble old standby, the largest and king of all breeds, is beginning, and in a very active way, to take hold of things again, and we think it will be but a short time at least before they will have

full swing, as they have the good qualities and these same good qualities are known and honored by all who have bred the Light Brahma. We want you, interested reader of the American Poultry Journal, to talk these good points up among those thinking of going into the poultry business, show them as much as you can how the noble Light Brahma ought to be bred and cared for, get your ideas together how you breed and care for the king of fowls, and have the same published so we may all see and learn. We see so much written about a lot of breeds, some of the stuff we question as we also do the breeds, that we long to see more matter of fact letters written in behalf of the Light Brahma. They are a great bird, worthy of the attention of the most skillful breeder, and will well repay the breeder for all the money and time he devotes to them.

Push the Light Brahma to the front, where it rightfully belongs, and show what a little ambition and judicious work and breeding will do for our pets, the Light Brahma.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: Will you please answer this question in your journal: I have of late started a flock of White Leghorns. They will lay a few eggs and then go broody; break them up, eight to ten eggs, and go broody again, both winter and summer. Is this characteristic of the breed, or is it the strain, or is it the way I care for them? I feed them wheat, oats, barley, cooked meat and cut bone. W. M. C.

Heriot Bay, B. C.

Answer:—Leghorns are supposed to be a non-setting variety, and it is not characteristic for them to go broody; therefore it must be the fault of your strain.

Editor American Poultry Journal.

Dear Sir: As the incubating season will soon be here, will you kindly publish in the columns of your journal the probable cause of some of my failures last year, that they may be avoided in future? I brought off two hatches of 125 eggs each. In each case only about half the eggs hatched. But the greater part of the balance had fully developed chicks in them which did not have the strength to get out of the shells. Some of the eggs were not broken at all, some were pipped, while in other cases the chicks got partly out. Your opinion on the cause of these results will be greatly appreciated. W. C. A.

Wilmette, Ill.

Answer:—Your failure to get satisfactory hatches last spring might have been due to various reasons. The main trouble was probably due to weak germs.

Sometimes this is caused by a lack of moisture and other times too much moisture. This can be ascertained by testing the eggs quite frequently. If they

White Plymouth Rock Male, Royal's grandson, No. 599. Weight 9½ pounds. A son of Favorite's great granddaughter, No. 434. Bred by Victor D. Caneday, Box A, Taylors Falls, Minn.

are not drying down fast enough it shows there is too much moisture in the incubator, and if they are drying down too fast it shows there is a lack of moisture in the machine. This can be regulated

by the ventilators and by the time allowed for cooling the eggs. All this should be explained in the directions furnished you by the manufacturers of your incubator.

Editor American Poultry Journal.

Dear Sir: Would be pleased to have you answer in your "Question and Answer" columns the following question: Do you consider one ounce of green bone per day per bird too great a quantity to feed pullets and hens? Am now feeding one ounce per bird every other day, together with eleven to thirteen pints of grain scattered in litter; also, greens for them to pick at being hung from the wall. This quantity is being fed to thirty-two White Plymouth Rocks. What do you think of this feed? Birds are laying quite well. I wish to know if more bone would help egg production. Shrewsbury, Mo. W. E. W.

Answer:—About two ounces per fowl three times a week is the proper proportion of green bone. As long as you are getting good results from your present method of feeding we would not advise changing it.

Editor American Poultry Journal.

Dear Sir: Would be pleased to have you answer a few questions in your next issue. I am going to begin raising White Rocks in the spring and would like to know if the following ration will make them lay in the winter. I will give them a warm mash in the morning, composed of bran, boiled vegetables, such as potatoes, turnips and beets, and skim milk and add a teaspoonful of ground bone or beef scrap for each fowl every other morning. At noon wheat and oats in litter, and at night all the corn they will eat up clean. Is it necessary to feed oyster shell when they have plenty of other grit that I make myself of rocks

American Poultry Journal Publishing Co., - Room 510, 325 Dearborn St., Chicago, Ill.

and broken crockery? I want to build a poultry house to accommodate 200 laying hens all in one room. How large should it be? G. F. S.

Richville, Minn.

Answer:—Your ration is a very good one, except that we would not feed so much corn, except in very cold weather. Oyster shell is not absolutely necessary when plenty of grit is provided. In building your poultry house you should allow ten square feet for each fowl.

Editor American Poultry Journal:

Dear Sir: I would like to have someone tell in your paper the best and cheapest way to warm a room for little chicks hatched before warm enough to travel outdoors. Would an ordinary oil stove heat a small room sufficiently, or would it be more expensive than some other way? What I mean is, suppose a brood is hatched Jan. 20 and the incubator filled at once, in three weeks another hatch is off, and so on. Now, can a room be warmed sufficiently without a regular brooder? Is so, how is the best and cheapest way, results considered? O. P. V.

Kinmundy, Ill.

Answer:—You cannot successfully rear little chicks without a brooder. Heat from an oil or coal stove cannot be distributed properly, and little chicks must have some kind of a hover provided for them.

Editor American Poultry Journal.

Dear Sir: What causes chickens, young or old, to become crop bound? Will improper grit bring this on or is it the feed? I have tried chick feed of all descriptions and fed according to direc-

tions, but I find that chicks raised in brooders get crop bound. I would like to know of any successful treatment in this respect. W. S. C.

Coffeyville, Kan.

Answer:—Crop bound in little chicks is usually caused by improper heat. This is really paralysis of the crop. In older fowls it is caused by lack of grit and by the fowls eating too much dry grass or straw. With little chicks there is no successful treatment. In older fowls it can be readily overcome.

Editor American Poultry Journal.

Dear Sir: Please give, in your next issue, an efficient recipe of a powder to make hens lay. M. P.

St Ciers Cavesse Blaye-Gironde, France.

Answer:—We do not believe in giving fowls powder to make them lay. If fowls are properly fed and cared for nature will take care of the egg yield, provided you have a good laying strain.

Editor American Poultry Journal:

Dear Sir: Does all beef scrap have an offensive odor like fertilizer? If not, what brands do not? 2d. How do you get poultry to eat beef scrap? 3d. Why should pullets be separated from cocks and cockerels? G. S. P. F.

Freetown, Ind.

Answer:—1st. Yes. 2d. Either by mixing it in the soft feed or by placing it before them in hoppers. 3d. It gives the pullets a better chance to develop.

Editor American Poultry Journal.

Dear Sir: I wish you to answer some questions: I am thinking of building a cement chicken house, the walls to

be 7 feet high on the high side and 4 feet high on the low side and 8 inches thick. Please let me know if you think it would be too damp or not. Also let me know if a hot water heating plant would be injurious to chickens to be installed in a chicken house if it was just kept above freezing and the chickens allowed to roost in it and have it also for a scratching shed. Please give me your opinion of keeping young hatched chickens in a cellar, if it was dry, during the early spring. A. R.

Lafayette, Ind.

Answer:—The chances are that a cement house would be more or less damp, unless you could arrange to have an air space in the walls. We do not believe in artificial heat in a poultry house. Little chicks need all the sunlight that is possible to give them. This cannot be done in a cellar, therefore we do not believe it advisable to attempt to rear chicks in a cellar.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next month's American Poultry Journal: 1. Are Leghorns so apt to disease as the larger breeds? 2. What breed makes the best broilers at one to one-half pound? 3. What is the average price for broilers in the spring? 4. Where can I get some White Leghorns bred for good laying? 5. About how many chickens could one man take care of, and have some fruit to attend to? N. Dahlen.

Harmony, Minn.

Answer:—1. The susceptibility to disease of any variety of fowls depends on the breeding and care given them. 2. There is really no best breed for this.

MILLER'S W. P. ROCKS

WIN AGAIN AT ST. LOUIS. MISSOURI

At the St. Louis Show Jan. 8 to 13, 1907, I won 3 firsts, 2 seconds, 3 thirds, 1 fourth, silver cup for 10 highest scoring White Rocks and sweep-stake silver cup for 10 highest scoring birds in American class.

At the Mo. State Show Dec. 11 to 14, 1906, I won 4 firsts, 3 seconds, the sweep-stake silver cup for best shaped Ply. Rock cock, the Ivory Soap cup for whitest bird in the show, and 6 other specials.

At the Ills. State Fair October, 1906, I won 5 firsts, 3 seconds and 2 thirds, This shows the quality of my birds. Wherever I showed I won more prizes than any competitor. EGGS, \$5.00 per 15.

WM. MILLER ... FAIRLAWN POULTRY YARDS
BOX ONE, CRESCENT, ST. LOUIS COUNTY, MISSOURI

PALMER'S S. C. BUFF AND BLACK ORPINGTONS

Win 18 out of a possible 23 prizes at Rockville, Md., and Paterson, N. J., this season (163 Orpingtons competing), including eight firsts, three seconds and two specials at Paterson for best shaped birds in show in these classes. At many of the shows this season the prizes were won by birds purchased from us or hatched from our eggs. Mr. Joe Coleman, Bellville, Ohio, writes: "A cockerel from your eggs scored 94 and the pullet I purchased of you scored 95." We have dozens of like pleasing testimonials, which proves that we can supply you with the best. Circular and price list free.

WOODLAWN POULTRY YARDS, (Established 1899) Box 80, SANDY SPRING, MARYLAND

S. C. BLACK AND BUFF ORPINGTONS

Willow Brook Prize Winning Strain

Eggs from choice matings \$3 per 15, \$5 per 30. Fertility and quality guaranteed. Place your order today if you want something fine.

RIDGELAND POULTRY YARDS 7941 Cornell Ave., Chicago, Ill.

BENNETT'S BARRED ROCKS ARE CHAMPIONS OF THE WEST

And won at Chicago, 1907, 1st, 3d cock, 1st, 5th hen, 1st, 4th cockerel, 2d, 4th pullet, 2d, 3d pen, championship male, championship female, best colored male and female, best two males, best two females, best display, the American Ply. Rock Club National Cup, three other silver cups and fourteen specials. Send for free circular. I also breed choice Shetland Ponies and Scotch Collie Dogs.

O. P. BENNETT & CO.
Box 238 - Washington, Tazewell Co., Ill.

Silver Laced Wyandottes

Exclusively Line bred for 20 years. They are still winning East, West, North and South. At three of the leading shows all the same week, January 14-19, 1907 we won as follows: Scranton, Pa., cock 5, hen 2, cockerel 2, 4, pullet 3, 4, pen 1, eight entries. Tennessee State Show, Nashville, Tenn., cock 3, hen 4, cockerel 1, 3, 4, pullet 1, 4, pen 1, eleven entries. Kansas City, Mo., ckl. 1, 2, 4, pullet 1, 2, 3, 5 on 9 entries. No old birds or pen shown. At Chicago, Jan. 23-30, 1907, with an entirely different string of birds, we won cock 3, 5, hen 1, 3, ckl. 4, pullet 1, 4, pen 1, or 13 entries. At Indianapolis, Ind., Feb. 2-3, 1907, ckl. 2, 3, 4, pullet 1, 2, 3, pen 1 on 8 entries; no old birds shown. We believe this is a record never equaled by any breeder, and remember that it was made with birds of our own breeding; besides selling the winners for a number of other shows. We did not fail to win the principal prize of 1st on breeding pen at every show where we competed for it. We have a lot of choice breeders yet for sale bred from same pens as our winners, at prices that are right. We sell no eggs. Send for circular or write your wants.

North Side Poultry Yards :: A. & E. Tarbox, Box A5, Yorkville, Ill.

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

THOS. F. RIGG, IOWA FALLS, IOWA

3. About 25 cents per pound. 4. Consult the advertising columns of this journal. 5. This is hard to answer. Some men can take care of 1,000, others cannot take care of 500; but under proper conditions one man should be able to properly care for 500 fowls the year round.

Editor American Poultry Journal.

Dear Sir: As I am a reader of your paper I would like you to answer some questions. 1. Could you give me the names and addresses of some breeders of Black Langshaus in Michigan? 2. Could I mate S. C. with R. C. White Leghorns with good results? Would the chicks be of both varieties? 3. What causes chicks to become crossbilled?

Cadillac, Mich.

R. L. B.

Answer:—1. Consult the advertising columns of this magazine. 2. No; you would ruin both varieties. 3. This is usually due to too much or too little heat during incubation.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your paper: This year I am breeding Barred Plymouth Rocks. My hens started to lay November 3 and one only laid eight eggs and stopped. I thought they were too fat, so I lessened the feeding for over a month, and they seem to be much lighter than before, but still they don't lay. They seem to eat and look well and are always cackling. Please tell me if there is anything wrong with them. J. J. A. South Kaukauna, Wis.

Answer:—A little beef scraps or green cut bone fed to your fowls about three times a week will probably start them to laying in a very short time. Feed plenty of wheat and oats, also.

Editor American Poultry Journal:

Dear Sir: I desire that you tell us in the February number what was the matter with my W. Wyandotte male. About two and a half or three months ago he began to shake his head and step backward. He continued to do this and upon investigation I found that he could not see well. His eyes began to run water and matter; the roof of his mouth on the left side became very much swollen, and a sore came near the center of the swollen part. I doctored him for causer, but he gradually grew worse and a few days ago I decided he could not get well and killed him. I then cut into his mouth and just below and in front of his eyes and found nothing but decayed matter. What was the matter with him?

G. W. G.

Saltillo, Miss.

Answer:—Roup and canker in a very advanced stage. You did the proper thing to kill him. When a bird gets in this condition he cannot be cured and is very liable to spread the disease. You should also thoroughly disinfect your chicken house and feed troughs; also procure some roup cure and give it as a preventive.

Editor American Poultry Journal.

Dear Sir: As I have taken your splendid paper since September I take the liberty to ask you through the columns of your Questions an Answer department if you could tell me something concerning the history and origin of the Silver Laced Wyandottes.

Greenwich, Conn.

W. P.

Answer:—During the past year Mr.

Thos. F. Rigg, associate editor of American Poultry Journal, prepared a very lengthy article on the origin and history of the Silver Laced Wyandottes and same was printed in these columns. In the near future this, together with the origin and history of all standard varieties, will be published in book form. This book will also contain colored pictures of all recognized varieties of chickens, ducks and geese and will be one of the most valuable books ever published on poultry.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your next issue: Is boiled meat and boiled bone as good for poultry as raw?

F. B. U.

Brighton, Wash.

Answer:—No.

Editor American Poultry Journal.

Dear Sir: Kindly answer following question in your next issue if possible: Where can I procure a good treatise on the care and management of the bantam breed, especially the Cochins, etc., and price? Also, what is the address and subscription price of Poultry Husbandry?

Philadelphia, Pa.

J. B.

Answer:—Reliable Poultry Journal, Quincy, Ill., have a book on "The Bantam Fowl." Poultry Husbandry is published at Waterville, N. Y.; subscription price, 50 cents per year.

Editor American Poultry Journal:

Dear Sir: Would be pleased to have you answer a question in the next issue if possible: Have quite a few chickens and have all moulted off, but as soon as they get their feathers in they will

shed again, and do that two and three times. Have got this year's pullets that have shed off three times. Seem to be in good condition. Feed wheat, corn and soft feed twice a week. Have a good warm house, free from draft. Skagway, Alaska.

W. T.

Answer:—Can some of our readers answer the above? This is an unusual thing for a cold climate.

Editor American Poultry Journal:

Dear Sir: Please answer in your paper what is meant by cockerel-bred and pullet-bred chickens, and how is it done?

J. A. W.

Greencastle, Pa.

Answer:—A cockerel mating is one that is mated to produce cockerels, and cockerels from such a mating is called cockerel-bred. The same with pullets. This is practiced to a large extent among Barred Plymouth Rock and Brown Leghorn breeders. Space in this department will not permit us to fully explain how it is done, but articles on this subject are published quite frequently.

Editor American Poultry Journal.

Dear Sir: Will you please answer through the columns of your journal as to what the duty is on thoroughbred poultry and eggs coming into Canada? There has been no duty for some time, but I understand the tariff has been changed. By giving me any information on this you will greatly oblige.

Forest, Ont.

E. A. R.

Answer:—You should make application for this information to the Canadian government at Ottawa, as we are unable to give it to you, as we have

not got the last tariff report of this government.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your questions and answers department: (1) Would you build a hen-house clapboard outside, lath and plaster inside with ventilating cupola in the roof? (2) Would you slant the front of the house a foot or two? (3) Would you put it on a brick or concrete foundation with a cement floor with a little pitch for drainage? (4) How big would you make a house for 100 hens?

Don't Push

The horse can draw the load without help, if you reduce friction to almost nothing by applying

Mica Axle Grease

to the wheels. No other lubricant ever made wears so long and saves so much horse power. Next time try MICA AXLE GREASE. Standard Oil Co. Incorporated

BUY DIRECT

AND UP

A Gem Incubator right from the factory and get the best machine at the lowest price. We sell on **Sixty Days Free Trial** which is plenty of time to test our machines thoroughly and see whether they are free from defects and will do what is claimed for them.

Gem Incubators are not cheaply made, single walled, thin metal part affairs made of skimp material, but are substantial and built for business; convenient, durable, neat and attractive. It is a most practical machine for either the expert operator or the beginner. Persons with no previous experience in operating incubators can easily run a **Gem** successfully from the start because of the simple and convenient methods employed in its construction.

To prove it we make the strongest possible guarantee and allow you to make

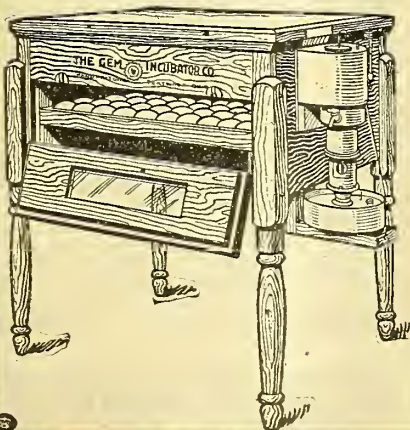

Two Hatches Free

on your own premises before you buy it. If you do not find the **Gem** exactly as represented we take it back and refund your money.

The improved system of ventilation in the **Gem Incubator** requires no artificial moisture and the **Improved Gem Regulator** is the best device so far invented for controlling the temperature. The Removable Chick Tray and Nursery is a valuable feature found in no other incubator. It permits thorough dusting and cleaning without getting on the knees and reaching in at arms' length as is the case with most other makes.

The **Gem Incubator** is a very complete machine requiring on an average only five or ten minutes in twenty-four hours to care for it. It can be operated anywhere; parlor, sitting room, bed room or elsewhere, as there is no smoke or odor from it whatever. Remember two hatches free and five years guarantee with every machine.

With all these conveniences **Gem Incubators** cost less than others which are not as convenient. Write for our new, fully illustrated, 1907 catalog. It tells all about **Gem Incubators** and **Brooders** and our full line of poultry supplies. We send it free. **GEM INCUBATOR CO., Box B, Trotwood, Ohio.**

ELECTRIC STEEL WHEELS
and the
ELECTRIC HANDY WAGON.
By every test, they are the best. More than one and a quarter millions sold. Spokes united to the hub. Can't work loose. A set of our wheels will make your old wagon new. Catalogue free.
ELECTRIC WHEEL CO., Box 194, Quincy, Ills.

(5) Don't you think a lath and plastered house would be easy to exterminate lice and disease? J. E. S. Chicago, Ill.

Answer.—(1) A house of this kind is very good, but too expensive for most people. (2) Yes. (3) Concrete, by all means. If the floor has a little slope to it it will be easier cleaned. (4) A house for 100 hens should contain 1,000 square feet of floor space. (5) Yes.

Editor American Poultry Journal.

Dear Sir: I have subscribed for your paper for some time and would like to ask a few questions. I have a S. C. W. Leghorn cockerel that looked well and strong last night, but this morning he stands around with the bill and head resting on the floor, he eats nothing and his neck seems to be twisted. I also have a hen in the same pen whose legs seem to be very weak. She eats, but does not lay, and the least push will knock her down. If you can give me any remedy I will be much obliged.

Chicago. E. B. C.

Answer.—When fowls get into the condition described above they should be killed, as there is no remedy for them. Not knowing under what conditions these fowls were kept we are unable to say what brought about this condition.

Editor American Poultry Journal.

Dear Sir: I have a S. C. B. Minorea cockerel a month old that has a red tinge in his ear lobes. Would you advise breeding from such a bird?

Sublime, Tex. O. W. H.

Answer.—A male bird of any variety that is intended for breeding purposes should be as near perfection as it is possible to get him. If this bird is strong in all other sections and your females are strong in earlobes, this bird will no doubt be all right to breed from.

Editor American Poultry Journal.

Dear Sir: Would like you to answer a few questions in your next issue: (1) How do you manage feeding little chicks on the hopper plan—is it the better way? (2) Is bonemeal good for little chickens, and how shall I proportion it in hopper or mash? (3) How long should one feed it to laying hens? Is it good for them from now on, and how much at a time? (4) Have bought one cock and one cockerel from the same flock. Am going to mate cock with a dozen pullets and the cockerel goes with a mixed flock. Can I use the cockerel next year with pullets from the cock mating? (5) Can the same cock be used another year in the same flock? (6) Can any cock be used the third year in any pen with good results? (7) Is pumpkin and seed good for fowls? Mrs. W. R. Forrest, Ill.

Answer.—Hopper feeding of little chicks has proven very successful on a number of large eastern plants. Simply procure the hoppers and fill them with chick feed and place them where chicks can get at them. We do not know that it is the best method, but we believe it to be a very good plan. (2) Bonemeal can be fed in the mash or in the hopper, in a proportion of about 5 per cent. (3) We do not advocate bonemeal for laying hens; oyster shell, grit and fresh-ground raw bones are better. (4) Yes. (5) Yes. (6) Yes. (7) Yes.

Are You Feeding Lice

Don't try keeping hens and lice at the same time. If you do, the lice will have the benefit, the hens the annoyance, *you* the experience. Get rid of lice before experience costs too much. Dust hens, nests, platforms, every nook and cranny with

Instant Louse Killer

One or two applications will rid the house and hens of every mite and body louse. Instant Louse Killer kills lice on poultry, horses, cattle, sheep ticks, bugs on cucumbers, squash and melon vines, cabbage worms, slugs on rose bushes, etc. It is also a perfect disinfectant and deodorizer. Sold on a written guarantee. Comes in shaker-top can for convenient use winter or summer. See that the word "instant" is on the can, as there are many imitators.

Editor American Poultry Journal:

Dear Sir: As a subscriber to your journal and a novice in the poultry industry, I ask for information through the columns of your paper. I have separated my Buff Orpington hens from the pullets, having eight that scored from 91½ to 95. These hens during the winter showed a decided change to light color, although the color is solid to the quill. I have placed with these eight hens a cockerel of unknown breeding, but good dark color and size. Will this breeding have a tendency to darken the color or is the cockerel too young to mate with the two-year-old hens, or would you advise getting a cock of the same age as the hens? Second, does a frosted comb on a cock injure his breeding qualities? Third, I have fifteen pullets, some of which show from one to a dozen white-tinged feathers in wings;

would you advise breeding any of these, or will the color be apt to follow or diminish in the chick? Fourth, is it essential for good breeding that the cock be fully developed in size and color? Fifth, are the eight hens sufficient to run with the cockerel, or would he take care of more? Sixth, do you consider a mash of chop feed with bran and H. O. a good feed for hens from whom I am saving eggs for hatching; if so, how often? J. A. H.

Coldwater, Mich.

Answer.—First, this mating will probably prove very satisfactory. If the cockerel is a vigorous bird he is old enough. Second, no. Third, in selecting birds for breeding always select those that are as near Standard as possible and avoid using those with off-colored feathers in their plumage, for the chances are that these defects will

increase instead of diminish. Fourth, yes. Fifth, the eight hens will be plenty for the cockerel. Sixth, we consider No. 1 wheat the best feed for hens in the breeding pens. This can be varied about three times a week with a good mash made up of table scraps, chopped stuff, bran, beef scraps, etc.

Editor American Poultry Journal:

Dear Sir: Please answer the following questions in your next issue: First, How can I properly ventilate my chicken house? It is 10 by 18 feet, with a door in the northwest side and six windows in the south side. It has a cement floor and is lined with tar paper. The walls are always wet and the floor damp. How can this be remedied? Second, what is meant by cockerel mating and pullet mating? Third, the chickens are sneezing and coughing

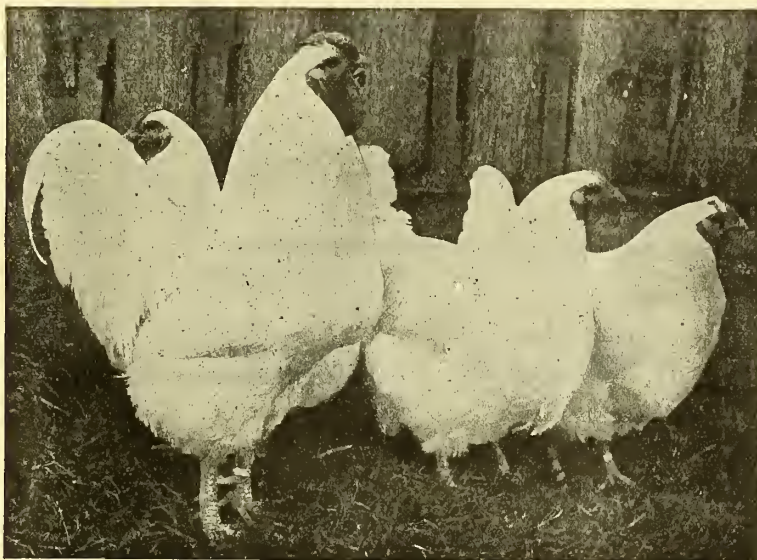

The Best of "The World's Best"

Our show record—made by ourselves—not the winnings of our customers, or not only at one show where the class might have been small and of no quality, but at the A. P. A. Show at Cincinnati, O., Jan., '06, in a strong class, our birds won 5 prizes and 5 specials: cock, hen, cockerel, 2d and 3d pen and 3 specials. Indianapolis, Ind., Feb., '06, one of the largest shows ever held in that city, we captured every 1st and 2d in single class, 2d and 3d pen and 3 specials. Indiana State Fair, Sept., '06, in another hot class, we won 1, 2, 3 cock, 2d cockerel, 1st hen and 1st pen. Tennessee State Show, Oct., '06, the hottest show ever brought out in the South; 1st, 3d cock, 1st, 2d cockerel, 1st, 2d, 3d hen, 1st, 3d pullet, 1st, 2d pen. This proves to you that we have THE "WORLD'S BEST" WHITE WYANDOTTES. On the testimony of judges who have given our birds so many prizes, of breeders who have visited our yards and of the public who have bought and come back to buy more time and time again, we have a few birds that

MONEY CANNOT BUY

Eggs From These Birds

can be bought. We have mated 15 yards for the egg trade, and to order you get one egg from each of the yards. From these eggs prize winners are going to be hatched. We could not get better stock than what we have in these pens. If we were to offer A THOUSAND DOLLARS EACH FOR HENS, because we already have the WORLD'S BEST, and all our matings are the BEST of the WORLD'S BEST.

HUNDREDS OF BIRDS

still for sale, and we are ready to fill orders for those who are in need and want the right kind of Wyandottes at the right kind of prices. Breeding cocks or cks. bred from winners and that will breed winners; females that have been bred from winners and will breed the same for you. We now have the choice birds of last season's breeding birds that are good enough to produce birds fit to uphold our claim of the WORLD'S BEST.

April 9, 1906.

J. C. Fishel & Son, Hope, Ind.

Dear Sirs:—As I reported the safe arrival of the eggs, I will now report the hatch. On the morning of the 1st when I went to the nest, there was one chick out; I began to think the hatch was an April fool. To my surprise when I got home at noon—to be sure there is where I went first—I saw that I had some more but I did not molest her. When I took the little heads peeping from under her. When I took her off she had nine of the nicest little chicks I ever saw—not a cripple. I am well satisfied. If I can just raise these. Wishing you all the success, I am
Yours very truly,

What a Few of Our Last Season's Egg Customers Said

April 26, 1906.

J. C. Fishel & Son, Hope, Ind.

Gentlemen:—I received the eggs in the best of shape, letting them set for 48 hours, then put them under a good mother hen. I watched that hen every day, and on the 15th she came off the nest with 12 of the nicest little chicks I ever saw. The hen stepped on one of them, the rest are doing fine and I have great hopes that they will all live. Thanking you, I am
Yours very respectfully,

Oct. 19, 1906.

J. C. Fishel & Son, Hope, Ind.

Dear Sirs:—You no doubt remember my reporting to you the hatch of 11 chicks out of the setting of eggs I purchased of you. That no doubt was good news for you to receive, but I am more than pleased to inform you that I raised 4 cks. and 5 pullets from those eggs. I showed 2 of the cks. and 4 of the pullets at —, won 1st and 2d cks., 1st and 3d pul. and 1st pen, also silver cup as special for whitest bird, which I won on the ckl. This proves to me that you have all you claim—The World's Best W. Wyandottes. Thanking you again for your fair treatment, I remain, Your friend,

These are only a sample of the many testimonials we have from the more than satisfied customers of ours. We can and will please you in the same way if you will but give us a chance.

Although the quality of eggs has increased two-fold, the price remains the same—\$5 per setting, unless selected from one special pen. Send 10c in stamps for our catalog, the most elaborate book on Wyandottes today; also our mating circular for this season, and a picture of two of our winners in their natural colors.

J. C. FISHEL & SON : Box J, HOPE, INDIANA

Paroid Roofing-

The Roofing With a Money-back Guaranty

Paroid Lasts Longest

BUY one lot of Paroid; open it; inspect it; apply it to your roof, and if then you are not satisfied that you have the best ready roofing made, send us your name and address, and we will send you a check for the full cost of the roofing including the cost of applying it.

Because it is made of the best felt—made in our own mills (established in 1817); other manufacturers buy their felt outside and simply saturate and coat it.

Because it is soaked (not dipped) in a saturating compound which makes it water proof in every fibre. Because it is coated on both sides with the strongest, thickest, smoothest, toughest, most flexible coating used on any ready roofing. Don't take our word alone for it. Compare Paroid with any other. You can see and feel the difference. Paroid does not break or crack in the coldest weather or run in hot weather.

Because it is applied with our patented square,

rust-proof caps—water proofed on both sides—the only caps that will not rust, work loose and cause leaks.

These are some of the reasons why we can give Paroid so strong a guaranty—why it lasts so long—why it is so largely used by the U. S. Gov't., railways, factories and farmerseverywhere. All we ask is that you try it, on our money-back guaranty.

If your dealer cannot supply you, don't take a substitute but send for samples and prices.

BUILDING PLANS FREE Enclose 4c in stamps and we will send you by return mail our 48-page book of plans for Practical Farm Buildings. Better do it at once.

SLEEPY EYE

CHICK FOOD

THE INDIAN SIGN OF QUALITY IN POULTRY FOOD

ALWAYS READY

ALWAYS RIGHT

Look for the portrait of old Chief "Sleepy Eye" if you want the poultry food or chick food best suited to raising healthy, hardy stock. We are in the great grain belt of the Northwest where every kind of grain grown possesses greatest nourishing value

SLEEPY EYE Poultry Food

SLEEPY EYE Chick Food

prevent waste in feeding and are cheapest to buy because all the food can be eaten, and every ounce is convertible into profit. You will raise healthy, hardy fowls, get more eggs and sustain less loss if you feed Sleepy Eye brands of food.

Don't feed your chicks soft foods that get sour, dirty and filthy; when the natural way is a clean, dry food that is always sweet and sound. Write today, send us name of your dealer, name of this paper and tell us the number of fowls you keep—we will send you free set of beautiful colored Souvenir Post Cards and samples of Sleepy Eye Poultry Food and Sleepy Eye Chick Food. See just how good they are. If your dealer doesn't have them we send them direct.

SLEEPY EYE MILLING CO., SLEEPY EYE, MINN.

POULTRY FOOD

GEORGE'S WHITE ROCKS

Are still winning wherever shown. Our wonderful record at Chicago, Boston and New York, prove their superior quality. We have a very fine lot of absolutely pure white, fine shaped cockerels for sale at \$5, \$8 and \$10 each. They have fine, low, even combs, nice bay eyes and yellow legs. They are show birds as well as fine breeding cockerels. Eggs from prize matings, one sitting \$5, two sittings \$8, three sittings \$10 and \$20 per hundred.

E. H. & S. H. GEORGE

Groveland, Mass.

True to Name, Birds of Quality, are Lapham's Buff Ply. Rocks.

First pullet at Detroit, score 95. My last winning at Detroit, Mich., Jan. 4 to 9, 1907, 1st pen, 1st and 2d pullet, 1st, 2d, 5th hens, 3d, 4th, 5th cocks, 3d, 4th cockerels, special for best shaped male and female, best colored male and female; also the American Buff Rock cup for best display. I will have ten pens carefully mated up of birds with a world's record, and I promise my customers more for their money than ever before, and guarantee to please or money refunded. Eggs \$2, \$3 and \$5 per 15. Write for my new catalogue, which is free on request. Show birds and breeders always on hand. Remember the name, the Gold Medal Strain. Please mention this paper.

Dearborn Poultry Yards

Dearborn, Mich.

and running at the nose. Fourth, how long should eggs be kept for hatching, and how should they be kept when being saved for hatching? R. C. L.

Freeport, Ill.

Answer.—First, by taking out a couple of the windows and placing bur-lap or muslin over the openings. Second, one is a pen mated to produce extra good male birds and the other extra good females. Third, the fowls have a cold, and unless attended to will develop into roup and canker. Fourth, eggs intended for hatching should not be kept longer than two weeks and should be kept in a room with a temperature about 60 degrees.

Editor American Poultry Journal:

Dear Sir: Will you kindly answer the following question in the next issue: What is the cause and cure, if any, for rattling in the throat of fowls when breathing? S. J. W.

Flint, Mich.

Answer.—Rattling in the throat of fowls is usually caused by bronchitis, which is produced by a cold which settles in the bronchial tubes. Relief may be obtained by allowing the fowl to inhale the steam from a kettle of boiling water to which has been added a few drops of carbolic acid.

Editor American Poultry Journal:

Dear Sir: Please answer in your next issue a few questions. Will you please tell me how one can tell a pullet from a cockerel when they are about eight or ten weeks old, and also the use of a colony house on a chicken yard? D. W.

St. Louis, Mo.

Answer.—There is no positive way of telling the sex until the combs are developed. Colony houses are used after the chicks are taken from the brooders and put out on the range.

Editor American Poultry Journal:

Dear Sir: Please answer these questions in your next issue: First, what is the standard weight for Buff Leghorns? Second, how far around do you turn the eggs in an incubator? Third, at what temperature do you keep a brooder? Fourth, if you had eight Buff Leghorn hens and two pullets, would you advise putting a dark cockerel with the five lightest hens, and a light cock with some dark hens? F. H. McG.

Jackson, Mich.

Answer.—First, the Standard does not specify any weight for Leghorns. Second, half way around at each turning. Third, 95 degrees when chicks are first put in, and gradually reduce the temperature as the chicks get older. Fourth, yes.

Editor American Poultry Journal:

Dear Sir: Will you please answer some questions? I have a henhouse 30 by 12 that is very damp. How can I dry it out? How large a yard do you advise for twenty-five Buff Orpingtons? What feed do you think is best for little chicks just hatched, two weeks old and six weeks old? Please compound me a balanced ration for laying hens. E. M. T.

Cassadaga, N. Y.

Answer.—Your house can be dried out by proper ventilation. A yard 25 by 50 will accommodate twenty-five Buff Orpingtons very nicely. Any of the various chick foods advertised in these columns is suitable for little chicks from one to six weeks old and older. A feed composed of wheat, oats,

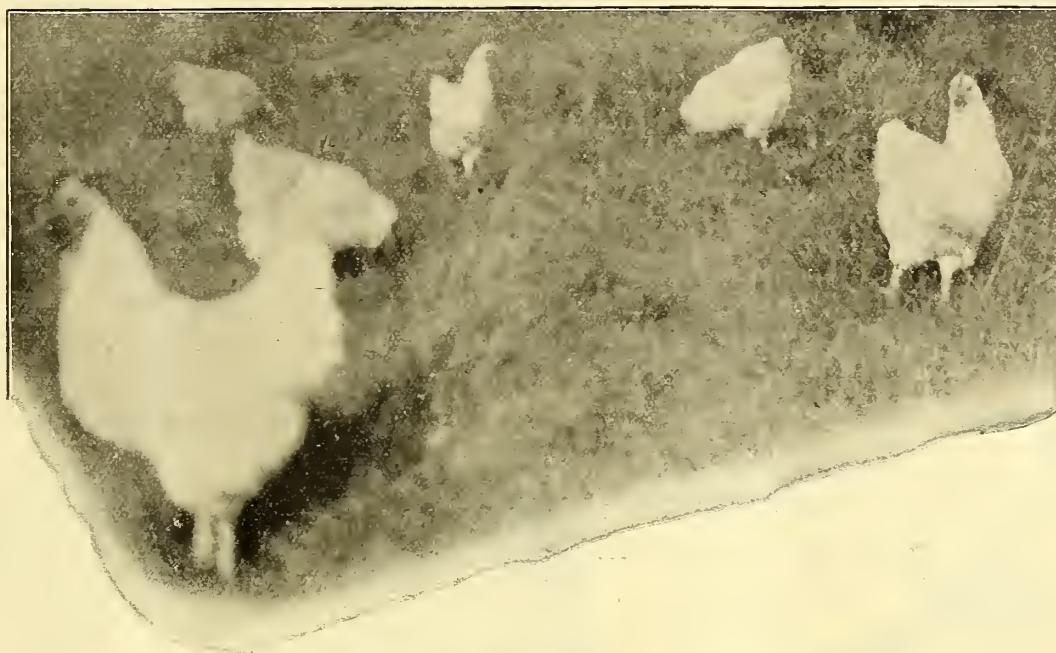

barley and corn will be found suitable for laying hens; 50 per cent wheat, 25 per cent oats, 10 per cent barley and 15 per cent cracked corn.

Editor American Poultry Journal.

Dear Sir: I would like to ask a few questions in your paper. First, please

Leghorns and rose comb White African bantams. Will it hurt any to let them run together after breeding season is over? Fourth, considering the feed and that I disinfect every week, should not I get more than four to six eggs from my Wyandotte pullets? They are all healthy. My show birds do not lay at

birds are not in the least diminished; in fact, they usually have an abnormal appetite and will continue to when they are too weak to stand up, but the more they eat the weaker and thinner they get. We have seen birds that in health weighed 10 and 12 pounds gradually lose flesh until they weighed only

Breeding pen of White Plymouth Rocks, owned by J. T. Thompson, Hope, Ind.

describe the disease "going light" and the remedy. Second, is oats two parts, wheat one part and corn one part, with turnips, cabbage, oyster shell, grit, bone, green bone and table scraps a good feed. I feed the oats and wheat and corn in the litter as a scratching feed in the morning. Third, I breed White Wyandottes, rose comb White

all yet. They were hatched May 26. Fifth, can a breeding pen of ten females and male be accommodated in a scratching pen 6 by 8, with yard for good weather.

Pontiac, Mich.

Answer.—First, asthenia, or "going light," makes itself known through loss of flesh, although the appetites of the

1½ pounds. This disease is the same as consumption in the human family, and there is positively no cure for it at the present time. All birds so afflicted should be killed and their bodies burned to prevent the spread of the disease. Second, yes. Third, no. Fourth, We do not know how many Wyandotte pullets you have, but fifty per cent of

LIGHT PLYMOUTH ROCKS

The universally admired Light Brahma color markings grafted on a splendid general purpose fowl. True Ply. Rock shape, size and comb. Shanks rich yellow and free of feathers. One of the most promising of American breeds. Eggs from select matings, \$5 per 14. Circular.

MECHANICSBURG, OHIO

Keeler's White Wyandottes The World's Greatest Strain

THE STRAIN of the correct type, the winning type, the strain that breeds on and on, reproducing itself true to type. The Keeler strain is true Wyandotte and will breed you true Wyandotte shape; their ancestors have been winners at America's leading shows for the past twelve years. They are winning today and will win in the future because they have more carefully bred blood lines than any other strain in existence, setting the stakes five (5) years ahead of their closest competitors; they are in fact as well as in name,

The World's Greatest Strain

Do you want eggs from my eight (8) grand pens containing the cream of the best birds raised the past four years. They have nice curving corrugated combs, red eyes, nice arched necks, broad back, short, well spread tails, full round broad breasts, fine yellow legs and beak, standard weight or over; are white from surface to skin and will stay white in the hottest summer sun. My forty-page illustrated catalogue that shows them as the camera saw them will convince you, it's free for the asking, send for it today. Eggs from the finest of exhibition matings \$5 per fifteen, \$9.50 per thirty, \$15 per fifty and \$25 per hundred.

Chas. V. Keeler, Box 900, Winamac, Ind.

True Success

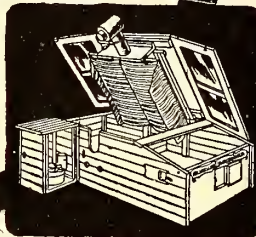

PROFITS are the measure of success. You are not getting your share if you lose a goodly per cent of your eggs every time you bring off a hatch. Such waste is not necessary, but it's common. To avoid it has been the earnest effort of the Experiment Station at Purdue University. It was through painstaking, study, and experiment there, with practically every good incubator made that the true principles of incubation were developed and embodied in the

PURDUE Incubators and Brooders

The inventor, Mr. C. E. Coffin, was an enthusiastic poultry student in this institution. He studied incubation from a scientific standpoint. His aim was abundantly realized. His are practical, everyday, working machines. They get results. Being so largely the result of principles established in the experimental work of the institution itself, he very properly gave them the name of his Alma Mater. Today they have the unqualified endorsement, not only of the Purdue Experiment Station, but of hundreds of expert poultrymen. They are not machines of "talking points." They grew out of tests and experiments with the best. They have hatching and brooding genius.

Write for Catalogue and learn the reasons. Why there are stronger, why more of them live, how expenses and losses are cut down, and how profits may easily be doubled cannot be told here. But our book tells. Write and let us send you a copy, FREE, and we pay the postage. A postal request will bring it. Write today.

THE INTERSTATE INCUBATOR COMPANY,

Indianapolis, Ind.

them should lay every day at this season of the year. Fifth, not for best results.

Dear Sir: Please answer this question in your Journal. My chickens are losing all their feathers under their bills and necks. What is the cause?

Whiting, Ind.

C. S.

Answer.—This is caused by what is known as the depilating mite. Lard and sulphur rubbed thoroughly into the skin will usually overcome the difficulty.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next Journal: What is the best way to feed green cut bone to fowls where one does not feed a wet mash?

W. G. M.

Danvers, Ill.

Answer.—Scatter it around the same as you would grain. This should not be fed in a mash.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer in your next issue, if possible, the following: I have a number of rose comb White Leghorns, also single comb White Leghorns. Now, if mating the single comb pullets with a rose comb cockerel, what will be the result? Will they be single or rose comb, and if rose comb, will they be full-blood? F. L.

Answer.—The result will be both rose and single comb, but not full-blood of either variety. We would not advise a mating of this character.

Editor A. P. J.

Dear Sir: Please answer me the following: First, hatched white Wyandottes in April from hens that I bought from a breeder. Chickens grew well, cockerels weigh from five to eight pounds, but are just beginning to mature (Feb.). Cockerels just beginning to crow. Had R. S. reds in same hatch which matured in October and November. Is this slowness due to the strain, my fault or the breed? Second, can you refer me to some breeder of the Black Orpingtons and White Leghorns who raises them for eggs and eggs alone?

H. S. W.

Salem, N. M.

Answer.—Not knowing the circumstances under which the chicks were raised, nor their breeding, we are unable to say where the fault should be placed. Second, consult our advertising columns.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue what is the cause of chicks hatched May 8 moulting in the fall of the same year, and can you give me the address of the Correct Incubator Co.?

Answer.—This is usually caused by too heavy feeding of fat producing foods. We are unable to give you the address you desire.

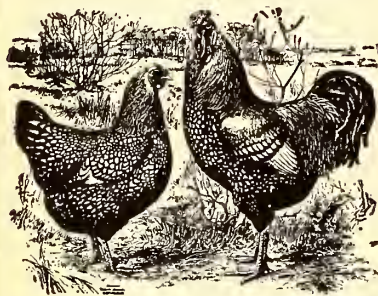

Editor American Poultry Journal:

Dear Sir: I wish you would please state in your next issue what is the cause of or what disease my hens have. Their heads get as yellow as their bills and they refuse to eat, and have a discharge from the bowels consisting of white and a little green. They droop and die in about a week. W. B. Mc.

Answer.—Enteritis or intestinal catarrh. Give pure drinking water and

Do You Know Hummel?

If not, you had better get acquainted. I have my breeding pens all mated up and can now fill your egg orders. My breeding birds score from 90 to 96 points. I have been very particular in selecting male birds for breeding purposes this season. Every bird is strong and vigorous. By my method of packing eggs I am able to ship them anywhere with good results to purchaser, and guarantee safe arrival of eggs at your nearest express office at the lowest possible rate. You can order your eggs direct from this advertisement.

regulate the food. Allow small quantities of mash or cooked food, with some chopped beef. Put a handful of oatmeal in the drinking water or give milk to drink. Give a tablespoonful of olive oil as a laxative to carry off any irritating matter that may be in the intestines, then follow with one-half to one grain of bicarbonate of soda and two grains of subnitrate of bismuth, in a little water, three times a day.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next Journal which is the best layers, the White or the Brown Leghorns, and how do the rose combs compare with the single combs as layers?

Russell, K.

M. A.

Answer.—We have never found much difference in the laying qualities of the Brown and White Leghorns, whether rose or single comb. Of course, a great deal depends on the strain.

Editor American Poultry Journal.

Dear Sir: I have a black Minorca hen whose head is very much enlarged, even down onto her neck. This condi-

tion began to develop about the first of August, and has not seemingly affected the hen's health, as she is the best scratcher in the flock. I often find her in a deep litter digging with much energy. Please answer in next issue.

A. E.

Wardner, Ida.

Answer.—Owing to the fact that the hen appears perfectly healthy otherwise we are unable to say what the trouble is.

Editor American Poultry Journal.

The question of which breed lays the most eggs is one that interests more poultry men than any other connected with the industry, and in an effort to give a solution thereto, the writer, and several others, propose an egg laying contest to be held here in connection with the Jamestown Exposition.

The exposition management has very kindly placed at our disposal a site of about five acres advantageously located within the exposition grounds, and we hope to secure the co-operation and support of admirers and breeders of the various

kinds of poultry, and also the help of the poultry press, in order to make the test a real one.

A prize of \$500 in gold will be awarded the pen making the best record, and a series of other valuable money prizes will be awarded the best pen of each breed, and also the greatest individual layer of each breed.

The contest will begin on May 15 and close on October 15, and is open to all breeders in the United States. Each pen to consist of ten hens and one cock. We want each breed to be represented by at least five pens, all fowls to be pure bred. The maximum number of hens contesting to be limited to twenty-five hundred.

Any one interested can obtain all further details by addressing the undersigned, enclosing stamp for reply.

Continued from Page 265.

day the other is used: and before every fowl one partition for meat, another for drink. All their meat is this: Boil barley in water till it be tender. Keep some so, and another parcel of it boiled with milk, another with strong ale. Let them be boiled as wheat that is dried. Use them different days for variety, so get the fowl appetite! Lay it in their trough with some brown sugar mingled with it. In the partition for liquor let them have water or strong ale to drink. They will be very drunk, and sleep: then eat again! Let a candle stand all night over the coop, and they will eat much in the night. With this course they will be prodigious fat in a fortnight (!!!). Be sure to keep them very sweet. This maketh the taste pure."

Poultry Herald is heartily in favor of the plan proposed by Thomas F. Rigg and adopted by the American Poultry Association at Auburn of holding an association show annually. The Herald goes several steps in advance. It says: "The American Poultry Association should be recognized as a controlling factor in the entire exhibition business, not simply the maker of a Standard by which fowls are judged. It should be necessary for a poultry association desiring to hold a show to become a member of the American Association, or receive a 'sanction' from it for holding that show. When the sanction is granted it should carry with it the obligation to employ none but licensed A. P. A. judges and to conduct the show

in every way upon rules laid down by the American Poultry Association, with such minor additions as may be necessary. Having received this sanction the show should be eligible to receive the specials offered by the A. P. A. itself and by its members, individual and club. When shows are conducted in this wise it should be illegal under the American Poultry Association for an exhibitor to show his birds at an exhibition not sanctioned by the A. P. A., and a rule should be framed for penalizing an exhibitor who does exhibit at an unsanctioned show by excluding his birds from competition at shows that are legally recognized. Winnings at an A. P. A. sanctioned show would then be the only recognized winnings, and the exhibitor would be reasonably near positive of receiving just and intelligent treatment. This may seem like a 'far cry' at this time, but it is what must come, and in the next few years at that, if the poultry industry is to receive the best service at the hands of the American Poultry Association and other bodies organized and perpetuated for its advancement."

Western Poultry Journal is strongly in favor of the plan of licensing poultry judges, but does not believe the new constitution of the American Poultry Association goes far enough in this direction. Brother Richards is not alone in this opinion.

"To those croakers who have maintained that the pigeon hobby had seen its best days the Boston show must have dealt a staggering blow, for it ended

in a blaze of glory," says the American Stock Keeper. Same thing at Chicago show.

To us, as well as to many others, the editorial page of Farm-Poultry will not be as interesting for a time as it has been of late. Editor Robinson says: "But while not willing to admit for a moment that the A. P. A. has any claim on forbearance in comment while putting its new constitution into operation, the writer is perfectly willing those who want that should know that Farm-Poultry henceforth will have little to say about the A. P. A. beyond giving such accounts of its affairs as are of interest to our readers as news. We consider that having announced its purpose to reorganize under such a constitution as that which has just been adopted, the American Poultry Association is no longer to be considered a factor to be reckoned with in the future development of poultry organizations."

A CORRECTION.

In the February issue appeared the ad of D. F. Valentine, Ft. Wayne, Ind., in which he advertised a trap nest. Through error we made this read the Sure Hatch Trap Nest, when it should have read Sure Catch Trap Nest. The corrected ad appears in this issue; look it up and write for particulars. Mention American Poultry Journal.

Clement & Fike of Libertyville, Ill., have laid the foundation with stock and eggs in White Wyandottes for the most successful plants. Let us get together on this matter. If about eggs, our egg circular is free; or on stock, large illustrated catalogue 10c. Inspection of our plant invited.

1907

AMSTERDAM WINTER LAYING STRAIN

Editor American Poultry Journal.

Dear Sir: Pekin ducks are coming in favor so fast in the west and so little is said about them in the papers that I have been tempted to write an article on the subject for some time. The big duck men of the east say very little about them because they have a good thing and don't care to let every-

one know about it. More men, for the number in it, have got rich in the duck business than any other line of poultry business. Ducks have a great many advantages over chickens. They make market size in half the time, take less brooder heat, if properly fed very seldom die off, in fact ducks are almost immune to diseases. They bring from 18 to 25 cents in Chicago from May 15 to June 10, live weight. Old ducks are not the trouble to care for that chick-

ens are. If you want to have separate pens all you have to do is to have separate houses, mate them up, keep them mated for about two weeks, say February 1 to 15, and you can't get the flocks to mix the remainder of the season.

Chicago is fast becoming a good market for green ducks. I have more ques-

commercial meat, they won't grow and are apt to die without it. Old ducks won't lay in winter unless fed it. I feed old ducks about the same for eggs as the young for growth. Soft feed is best, as a duck has no crop.

Use one drake to five ducks in small flocks, one to seven in large flocks. Have water that ducks can get their

IDEAL COLUMBIAN WYANDOTTES SKETCHED FROM LIFE.

Prize winners at Johnstown Poultry Show, New York. De Graff Poultry Farm, Amsterdam, N. Y. Mr. E. T. De Graff is a strong advocate of photographic advertising, and this is a fair sample of the quality of the cuts that make up his 1907 Color Plate Book on Reds, which is undoubtedly the finest illustrated poultry catalogue ever published.

body know about it. More men, for the number in it, have got rich in the duck business than any other line of poultry business. Ducks have a great many advantages over chickens. They make market size in half the time, take less brooder heat, if properly fed very seldom die off, in fact ducks are almost immune to diseases. They bring from 18 to 25 cents in Chicago from May 15 to June 10, live weight. Old ducks are not the trouble to care for that chick-

tions asked me by my customers about ducks than chickens, showing how little people know about them.

As to feed and care, young ducks should be fed a soft mash of 1 part bran, 1 part cornmeal, 1 part clover cut or some other bulky feed, with 1 part beef meal or scraps, put 5 per cent coarse sand or fine oyster shell mixed in. Right here let me say where nine-tenths of those starting out in the duck business fail, in not using the

heads down in. This is essential. For old ducks a swimming place is of great benefit, but not for young stock to be fattened.

Have laying house well bedded. I put up a 10-foot board about a foot from wall on two sides of house, the ducks will go back of these to lay and bury the eggs.

The Pekin is the best duck for market as it matures quick, is of a good shape and is the easiest to care for.

Amatite ROOFING

NEEDS NO PAINT

DO YOU USE A ROOFING THAT
REQUIRES PAINTING AND COATING?

If so, do you realize that the coating and painting will probably cost as much, if not more, than the first cost of the roof itself?

When you buy a roofing that has to be coated, you must consider the *cost of maintenance* as well as the first cost. If you do this, you will find

that coated roofings cost you just about twice the original cost.

If you try to save money by not coating such roofs they will *soon leak and rot away.*

The best way out of the difficulty is to buy a roofing that requires no coating, such as Amatite. This Ready Roofing has a *special mineral surface* which makes painting *entirely unnecessary.* The first cost of Amatite is the whole cost.

After it is once laid on the roof it costs you *nothing* to keep up.

Furthermore, the price of Amatite in the first place is less than that of almost any other ready roofing. It is by far the lowest priced of the *good ready roofings.*

When you get prices don't forget to count in the cost of putting on paint every year, and you will be sure to come back to Amatite as the cheapest and best.

FREE SAMPLE

Let us send you at once a **SAMPLE** of AMATITE and a Booklet of information about it. We want you to see how much better it is than the kind that has to be painted.

Why 1907 Owen Farms Chicks Will Win

Blood will tell. **Unbeaten winners**, properly mated for best results, will produce unbeatable chicks. At Madison Square Garden, N. Y., in 1905-6-7, and at Boston in 1906, our birds won 48 firsts and cups out of a possible 67. This record has never been approached on our varieties in such tremendous competition.

These **unbeaten winners** are properly mated, and they will breed the finest chicks we ever raised. New mating list for 1907 now ready. Eggs from our best are \$5, \$10 and \$20 per 13. Eggs from well mated pens are \$3 per 13. Eggs from thoroughbred utility pens are \$6 and \$10 per 100.

Good to fine breeding birds, carefully mated for best results, and also bred from our **unbeaten winners** are yours at low prices for blood lines and quality. Let us quote you and judge for yourself. Our breeds are:

**Buff and Black Orpingtons,
Barred, Buff and White P. Rocks,
and White Wyandottes.**

Illustrated catalogue tells the story. We want you to read it and it will be mailed free if you will ask

OWEN FARMS, Box A, Vineyard, Haven, Massachusetts
WM. BARRY OWEN, Proprietor MAURICE F. DELANO, Manager

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1½ to 1½ lbs. in seven weeks on it. No science required to feed my system. Failure impossible. Start right. Circular and testimonials free. Write today and stop that big feed bill.

EDGAR BRIGGS, Box A

NEW ROCHELLE, N. Y.

Don't try to raise ducklings with a hen; eggs hatch far better under hens but do better with brooders to raise them. My opinion is that a very few years will see the west dotted with big duck ranches.

Last year duck men could not more than two-thirds furnish enough eggs for the fancy trade. They can be picked in summer and we found the feathers about as good and brought very nearly as much as Emboden geese feathers.

Farina, Ill.

Oscar Wells.

Did you know some of the best prizes this season, won at the largest shows in America were from stock purchased from our "Greatest Strain on Earth" White Wyandottes. Eggs or stock. Write us. Clement & Fike, Libertyville, Illinois.

A NEW POULTRY BOOK.

**Especially Written and Designed for
Beginners.**

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

We want everyone to read this book, therefore we are offering it at the

CUT PRICE OF 25c.

The regular price being 50 cents. We have hundreds of testimonials from breeders all over the country who have secured a copy of this book.

Send 25c today and secure a copy of this 128-page book. You will not regret having done so.

Congress Park Poultry Yards,
Congress Park, Ill.

Edward E. Ling, South Portland, Me., writes: "I have this season fourteen yards, mated of the highest class birds that I have ever produced, from which I can supply my customers with eggs. My 1906 and 1907 Boston and Madison Square Garden winners are all in my breeding yards this season. I have no birds or yards reserved, but sell eggs from every bird I own. I have a few good, choice and extra nice cockerels yet on hand for sale. My guarantee is very liberal—I not only fully guarantee every bird I sell to be precisely as represented, but also guarantee each bird to be entirely satisfactory to my customers or they are returnable. My 1907 catalogue and mating list will be sent free upon application.

Be independent and still make \$100 and upwards per month organizing in every town and state clubs of ten, purchasing groceries and other products, \$1 per week or month. Each club member receives in course of ten months \$10 in products and a \$10 premium, all for \$10, freight paid. Let us tell you how this can be done. C. E. Murbach Co., 62-64 Plymouth place, Chicago, Ill.

Why not make a good round sum of money in your leisure time by organizing clubs of ten, purchasing groceries and other products on factory to consumer plan. A \$10 assortment of goods and a \$10 premium both for \$10, and we pay the freight. For further information write C. E. Murbach Co., 62-64 Plymouth place, Chicago, Ill.

Send to A. B. Kaye, Walworth, Wis., for a setting of Black Minorca eggs. Mr. Kaye wins every year at Chicago.

DAKIN'S "PREMIER" WHITE WYANDOTTES.

THE GRANDEST OF THEM ALL

They are "THE CLASS" and have won since 1900 at Madison Square Garden, N. Y., Boston, Chicago and St. Louis, more of the "HIGHEST AWARDS" than any other. Do you want a winner? Are you short on show birds? If so, write your wants at once. Only a limited number of selected birds available. Prices reasonable for these "BIRDS OF CLASS." Specimens fitted for the show room for purchasers if desired.

JOHN L. DAKIN

ROXBURY, MASS.

YOUNG'S STRAIN OF S. C. WHITE LEGHORNS

I HAVE NO OTHER BREEDS. My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined; including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; cks., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; cks., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 300 fine cockerels at reasonable prices.

D. W. YOUNG - Ridgewood, N. J.

HAUPT'S ORPINGTONS

ROSE AND SINGLE COMBS are winners at Madison Square Garden, N. Y., Pennsylvania State Show, great Allentown Fair, Dover Poultry Show, etc. Stock and eggs. Over 100 acres devoted to the higher element of the Orpingtons. We will also sell stock and eggs from our huge farms of S. C. W. Leghorns. No better stock anywhere.

J. S. HAUPT & CO.

Easton, Pennsylvania

"Ivrolett" White Ply. Rocks

Geo. W. Hillson's Down-to-Date Winners

"Ivrolett" champion gold special cockerel at Madison Square Garden, N. Y., 1906, for most typical and best shaped White Rock male in the show, 104 competing. "Ivrolett," 1st and special prize pullet World's Fair, St. Louis, 1904, 78 competing. Winners of the Hon. Joseph B. Thomas, Valley Farm Challenge Silver Trophy, Johnstown, N. Y., Dec. 11-15, '06, for best two cocks, two hens, two cks. and two pullets. The above record stands alone and unequaled by any White Rock breeder in America. 500 grand exhibition and breeding cockerels, trios and pens mated for best production. Elegant 12-page catalogue free. EGGS: Best exhibition matings, 1 setting, \$5; 2 settings, \$8; 3 settings, \$10; special prices per 100.

GOLDEN AND WHITE

Chicago winners, bred from Chicago winners for many generations. Reasonable prices on all stock.

A. W. DAVIS

Box 10, BIG ROCK, ILL.

See What Jackson's World's Foremost WHITE

Wyandottes

have done for my patrons. This is only a few of what I have received this season: have scores of such letters. Some do not care to have me use their name, but many owe their success to my strain. I raise and sell more high-class birds for the number raised than any other breeder. I have shipped many times this season over \$100 worth of birds at a shipment and use only a one-inch ad through many months of the year. The success of my strain has not been through my own winning. It has been the results of my patrons. The wise ones know money can buy the winners, but it takes skill to breed them. I have always bred my own as well as furnishing the winners for many of the most noted shows. See my ad on page 217.

Marshall Mich., Feb. 1.

J. H. Jackson, Hudson, Mass.

Dear Sir:—I won 1st cock, 1st and 2d hen on trio you sold me, in our show of 1,200 birds. There were many bought for this class from noted breeders, to win first, but not one of them did so. I shall want some more eggs this spring from your best matings. Yours truly,

HOWARD GRANT.

So. Paris, Me., Dec. 11, 1906.

J. H. Jackson, Hudson, Mass.

Dear Sir:—I am well pleased with the pen of White Wyandottes you sent me. They won 3d at Portland, Me., show in strong competition. They are very white birds and have ideal combs and shape. Thanking you for the kind interest you have taken in this deal, I am yours truly, F. S. CLARK.

Kaitangato Otago, New Zealand, Feb. '06.

J. H. Jackson, Hudson, Mass., U. S. A.

Dear Sir:—Trio of White Wyandottes received, after about 100 days' journey, in very good condition for such a trip. They were laying when arrived, so they had good care. After a rest and being washed I find, and also several experts who have seen them, pronounce them the best ever imported to this country. You have given me good treatment and I thank you for same. Am sure any more fowls imported to these parts will come from your yards.

Yours truly, GEO. AITCHISON.
Have made four shipments to New Zealand.

Westons Mills, N. Y., Feb. 4, 1907.

J. H. Jackson, Hudson, Mass.

Dear Sir:—I would like some more eggs from your best matings this spring. I have had good results with your strain. At Olean, N. Y., 1906, I won 1st and 2d pen, 11 pens in class. Some bought from noted breeders in the west as sure winners. I won silver cup, 1st and 3d ckl., 2d pullet, 2d hen, every special, six in all, and one for highest scoring ckl. in show. Judge Drenstedt says it was the best collection he had seen outside of the large shows. I also won every first on four entries at Cuba, N. Y. Yours truly,

F. C. HOLLAMBY.

Manchester, N. H., Jan. 29, 1907.

J. H. Jackson, Hudson, Mass.

Dear Sir:—I am pleased to write you that I won 1st on cock at Manchester Show; also 1st at Berwick, Me., on bird I bought of you as a cockerel. He has been a wonderful good breeder. I sold a sitting from his pen to a party who produced a pen which won 2d in a show scoring as high as 95. A sitting sold from his pen produced a pen which won 1st at Barre, Vt. I will keep in line with your strain. Yours truly, C. G. STEVENS.

Pendleton, Ind., Jan. 30, 1907.

J. H. Jackson, Hudson, Mass.

Dear Sir:—Cockerel received and is a dandy. Hen I bought of you a year ago which won and scored 95¼ at Indianapolis, Ind., has proven the best layer I ever had. It proves high scoring birds can be good layers if bred so. I have mentioned your kind treatment to several breeders.

Yours truly, S. B. WALKER.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

A CLUB FOR BUSY WOMEN.

The women who read this department, lead, without exception, busy, useful lives. Their days are filled from morning until night with duties which cannot be neglected. They are the very ones who most need occasional relaxation and a complete change of thought and of surroundings. And yet, from the very nature of the case, and because they have so many responsibilities, they feel that they cannot fritter away the time. There is no rest for them in an afternoon of so-called pleasure, when the spring sewing, or the basket piled high with mending, looms up in the background of the picture, a mute reminder of the old saying that "he who dances must pay the piper."

A correspondent of the American Poultry Journal tells how one group of busy women, living in a small town, has solved the problem this winter in a most practical as well as pleasant way. They

are all housekeepers and home-makers in the truest sense of the word, and have no time to waste, yet have felt the necessity of getting out of the rut of daily routine and of freshening their minds by coming in contact with the views of others. Their plan is told in the words of our correspondent as follows:

"Early in the winter three or four of us decided that we would meet every Thursday afternoon, bringing our sewing, mending, or any piece of work, no matter how humble or commonplace, which needed to be done. We made it a neighborhood affair, including just enough to form a congenial crowd, which would not be too large for our somewhat small rooms. We do not call it a club and have no constitution, rules or bylaws. The hours of meeting are from two to five o'clock, and each one is free to come at any time within that limit, and go whenever she feels that she must. The sewing machine is at the disposal of whoever wishes to use it. Best of all,

there are no refreshments, and the hostess is accordingly as free from extra work and responsibility as are the others. Sometimes only four or five are able to be present, but there is such a delightful freedom and informality about the gatherings, and so much work is accomplished, with little or no conscious effort, that it must be a strong reason which will keep any one away. We all feel that of all the clubs, social or literary, to which we have ever belonged, this is the very best, and we intend to continue our meetings indefinitely."

This idea can be carried out not only in the more thickly settled communities, but will be equally feasible in the country, wherever three or four congenial women can get together for an afternoon once in every week or two. The American Poultry Journal recommends that the readers of this department give it a general trial, and report their experiences, telling of any changes or improvements which they may make upon the original plan.

FOR THE LENTEN SEASON.

Many people hesitate to serve soup, from a mistaken idea that it is necessary to have meat stock as a foundation. The following recipes show what can be done with the winter vegetables which are to be found in every farm cellar, or which can be purchased for a few cents at the groceries by the dwellers in cities:

Cream of Salsify.—Scrape twelve roots of salsify, sometimes known as "vegetable oyster," throwing each one into cold water. Cut them in very thin slices, cover with a quart of cold water, add

THE PURINA CALL

DON'T FEED BY GUESS---IT'S A SCIENTIFIC MATTER

Almost everything depends on the feed—saving newborn chicks, development, making hens lay, preparing fowls for market—it's a question of feed all the way.

Might as well be right as wrong. It has cost us a good deal of money to get at the secret of success with poultry. You can get it from us cheaper than you can by experimenting on your flock.

PURINA POULTRY FEEDS

In "Checkerboard" Bags

is your guarantee. They are scientific feeds. Every one has been prepared for its special purpose after long and painstaking experiment.

Sound grains, no siftings, no dirt, **NO GRIT**. Selected and balanced to suit age and purpose you are feeding for.

Putting them in Checkerboard Bags don't make them any better, but it guarantees that you get the genuine. The goodness of Purina Feeds has given them a good name. It is our business and to our interest, as well as to your interest, that you get Purina when you call for Purina. **They are always in Checkerboard Bags.**

Purina Baby Chick Feed, for the first ten weeks.

Purina Scratch Feed, for growth and eggs.

Purina Mash, makes hens lay.

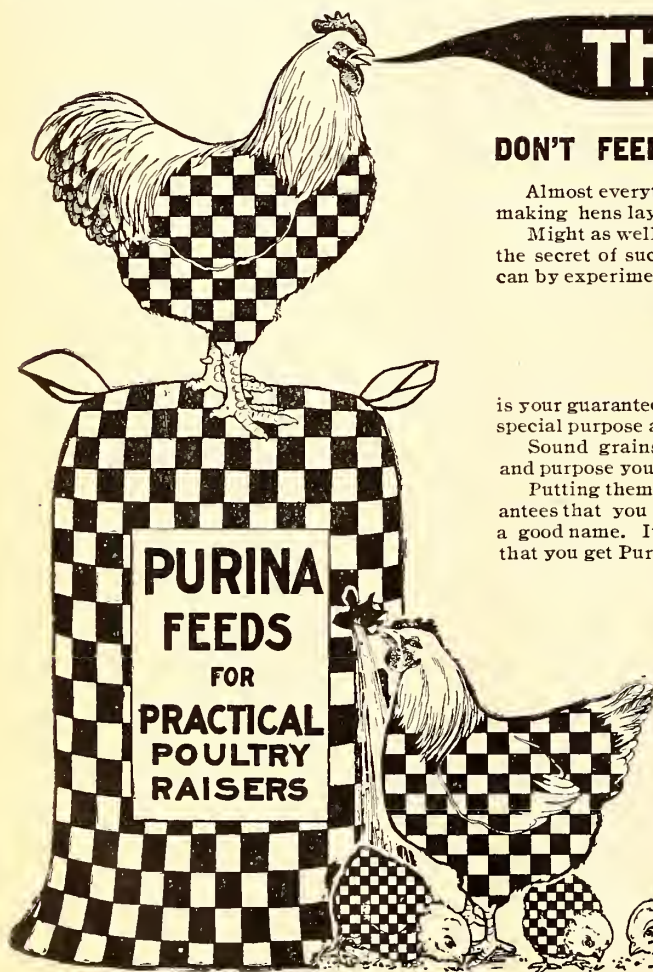

Purina Alfalfa Meal, winter green stuff.

Ask your dealer, but watch out for the "Checkerboard Bags." Don't be put off with "something just as good." If your dealer does not have Purina Feeds, send us his name and we'll send you samples and a free copy of the "Standard Poultry Feeder."

Hatch and Brood

AT SAME TIME

Here's a new thing—a complete hatcher and brooder, a machine that performs both of these operations at the same time and does both well. It is made entirely of metal and asbestos felt, so cannot warp, swell, shrink or crack. Will hatch hens', ducks', goose or turkeys' eggs equally well and at the same time.

Metal Mother \$7.50

BROODER - HATCHER

40 CHICKS FROM 43 EGGS

Cambridge, N. Y., Nov. 12, 1906.

Cycle Hatcher Co.,
Elmira, N. Y.

Gentlemen:—The combined Brooder-Hatcher I purchased of you last spring is certainly all you claim it to be. The first time we operated it we put in 49 eggs. After the sixth day we tested out 7 and replaced them with 9 fresh eggs. The first lot hatched out 40 strong and the 9 eggs put in after the machine had been running a week hatched 7 chickens. The next time we put in 50 eggs, tested out 6 and 1 that was cracked, and hatched 40 chickens from the 43 eggs. Chicks were brooded in the machine at the same time the eggs were incubating, doing double duty with the one lamp. We think the "Cycle" is the best machine on the market.

Very truly yours,
H. V. BUMP.

is a long step ahead of all others—the most remarkable invention in the poultry world. With it 2 qts. of oil hatches fifty eggs and broods the chicks. A time-saving, labor-saving, oil-saving machine complete for \$7.50. Light in weight; shipped cheaply by express. Free catalog tells how it works. Regular Cycle Hatchers and Brooders at \$5. Each are great favorites. Write now.

CYCLE HATCHER CO.
Box 214 Elmira, N. Y.

WE WIN!

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

one bay leaf and a slice of onion. Cook half an hour, or until the vegetable is so soft that it can be put through a sieve. Have ready a white sauce made by bubbling together a tablespoonful of butter and one of flour, and adding it to one pint of milk. Stir carefully, until the milk is at the boiling point, to prevent lumping. Add this to the salsify, and season to taste with salt and pepper.

This recipe gives the foundation of nearly all vegetable soups. The essentials are the thoroughly cooked vegetable, seasoned while cooking, and spiced to taste by adding bay leaves, cloves, allspice, onion, a bit of a red pepper, etc., and rubbed through a sieve. Add the white sauce just before serving. Among the many delicious variations are soups made with celery, carrots, parsnips, onions, potatoes, beans, canned peas or lima beans. In fact, the list can be prolonged indefinitely, according to the ingenuity of the cook. Often delicious combinations can be made by adding together the left-over vegetables from a previous dinner. The French are past masters at the art of soup making, and never allow even the smallest remnant to go to waste. The soup pot is constantly on the stove, and by skillful combinations of flavorings, no two soups ever taste alike, though they all come out of the same pot.

Cream of tomato soup is made much as the other vegetable soups are, but care must be taken to add a pinch of soda to the tomatoes before combining them with the milk. Here is a hint worth remembering: If the tomatoes are put a little at a time into the milk, it will not curdle, but if the milk is poured into the tomatoes, it will be very apt to do so.

EXPERIENCE DEPARTMENT.

Mrs. A. J. C., of Lima, Ohio, sends the department the following helpful hints: To fill holes in plaster, take old newspapers and tear them into bits, cover with water and cook until it forms a paste. Apply this with a small, flat piece of wood; a piece of a shingle is all right for this. Let it harden for twenty-four hours, and the wall will be in shape for repapering. By the way, it is a wise idea to always save pieces of the wall paper, and have them handy, where they can be found on short notice, if a hole is to be covered. This should be done as soon as it is made, for small holes in the plaster will soon develop into big ones, unless taken at the start. The paper pulp just mentioned makes a good filling for cracks in the floor or woodwork, and when the latter is given a fresh coat of paint or stain, the filling cannot be told from the wood.

Mrs. C. J. Green, of Holyoke, Mass., writes: "I have found that my starched clothes are much easier to iron and will have a glossy surface if I dissolve two or three lumps of sugar in the boiling starch. This also makes the clothes stiffer. A teaspoonful of turpentine or kerosene added to every quart of starch will also give a brilliant polish, and will keep the iron from sticking. If my irons seem rough, I rub them on a paper over which I have sprinkled common salt. This cleans them even better than wax. My children enjoy making scrap books and paper doll outfits on stormy days, and are always demanding paste. I have found such a good recipe for paste that will keep indefinitely that I want to pass it along to readers of the

BENT'S MILK ALBUMEN

(Dry Skim Milk). 43 to 50 per cent Albumenoid Protein. Originator Milk Food for Poultry.

Keeps Poultry Healthy

VIGER'S
Crushed Charcoal

Prevents Disease

WE WILL MAKE YOUR POULTRY HEALTHY.

This is no idle boast. Our assertion is backed by an iron-clad guarantee. We manufacture Viger's Chemically pure Crushed Charcoal, the greatest poultry conditioner on earth. We guarantee our charcoal to keep your hens healthy, in good laying condition, free from digestive disorders and all diseases of the Crop. Why? Simply because Chemically pure Charcoal, through its great absorbing powers, will positively renovate and cleanse the system of all impurities, noxious gases and disease germs.

For \$1.00 we send you a 50 lb. trial sack. Feed it to your fowls. If it does not do as we say, we will refund your money immediately.

3 sizes: Coarse granulated—for mature poultry; fine granulated—for small chicks; pulverized—for soft food. Samples free. Special price in quantities.

Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.

HERE'S THE GREATEST INCUBATOR BARGAIN.

THIS 230 EGG Royal Incubator \$12.75
FREIGHT PREPAID ANYWHERE
East of the Rocky Mountains.

Quality and price—two things that "talk." You can't get a better incubator than the Royal at any price. It is built right, strong, substantial, will last a lifetime, and is guaranteed to hatch as large a percentage of fertile eggs as any incubator in the world. It is not a "cheap" incubator, but is strictly high-grade in every respect. Easy to operate; automatic control of heat; perfect ventilation. **ONE TRIAL HATCH FREE**, if you want it. Your money back if not satisfactory. Don't pay more for a smaller incubator; don't buy a poorly constructed, go-to-pieces incubator; don't buy any incubator until you have investigated our remarkable offer. Remember, **WE PAY THE FREIGHT**, (east of the Rockies). We guarantee the incubator under a bank bond; we give you a fair trial. We save you about half the cost and guarantee better results than incubators give costing twice as much. It will surely pay you to investigate. Write to-day for special offer:

FREE Handsome Catalogue of incubators, brooders, poultry supplies, poultry foods, eggs for hatching and standard bred poultry from our own farm. Book on "Proper Care and Feeding of Young Chicks, Ducks and Turkeys," 10c. 50c Standard Poultry Paper 1 year, 10c.
ROYAL INCUBATOR CO., Drawer 80, DES MOINES, IOWA.
WRITE TODAY AND SEE FOR YOURSELF THE BARGAIN WE OFFER.

Eggs For Hatching

After winning 67 regular premiums in one year, 26 of these firsts and specials, being over double as many firsts and specials won by all competitors in the history of the Tenn. State Show at Nashville, and this after selling the cock birds that won 1st and 2d in Whites in a class of 275, I have come back to "The Pines," mated up the best lot of

Silver, Golden, White and Buff Wyandottes

that are to be found in America, and will sell eggs that will hatch you winners at \$5 per 15 from select pen, or \$3 per 13; \$5 per 26 from all pens. \$9 per 50 or \$15 per 100.

Jones, The Wyandotte Man

has a show record that is unequalled by any breeder in the world. My handsome 36-page catalogue, printed in colors, will tell you all about it; send 10c in stamps for mailing. It is a book worthy a place in any library; don't be without a copy.

1000 High Class Birds Yet to Sell

Get what you want—a pen, trio, pair or a male bird that will improve your flock, but get them from "The Strongest Blood Lines on Earth," they will please you. Don't buy until you get my prices. 27 High Class Collie Puppies For Sale; a Few Brood Bitches Also.

High-Protein Foods Make Hatchable Eggs

National High-Protein Egg Scratch—National High-Protein Egg Mash.

Sold in Sealed Sacks—\$2 for 100 pound Sack; \$1.25 for 50 pound Sack. The most trustworthy foods for making strong-germed fertile eggs. High in animal protein; properly balanced. **H-P Egg Mash** is exceedingly palatable and unquestionably the best mash for wet or dry feeding.

NATIONAL HIGH-PROTEIN CHICK STARTER. Sold in Sealed Sacks—\$2.50 for 100 pound Sack; \$1.50 for 50 pound Sack. An absolutely clean, perfectly balanced, baby chick food made from the choicest quality, sound, selected grain and animal protein. No dust, no waste, no losses. **No Grit, Shell, Charcoal** or other cheap adulterants and loaders are in the six National H-P Poultry Foods. Every grain makes you money. Why waste it in buying other heavily loaded foods?

We have the latest improved grinding machines, automatic mixers and mill equipment, and make all our foods, thus saving you the middleman's profit. No better poultry foods can be bought at any price. Let us quote you by the ton or car. We pay the freight on 200 lbs. or over to any U. S. station west of the Rockies. One price—Cash. One policy—Absolute satisfaction or return the food at our expense. Order now. Send for booklets, etc., describing our full line of poultry foods.

CITY MILLING CO.,

Box 72,

Quincy, Illinois

SQUARE DEAL POULTRY FENCE

1½-INCH SPACING AT BOTTOM.

Like all poultrymen you have experienced the need of something better than old fashioned netting for fencing poultry pens. We offer you the best—It is stronger, lasts longer, is closer spaced, and costs less.

Stronger. It is made with top strand of No. 11 wire, bottom strand of No. 12, and intermediate strands and stays of No. 14 wire. The lightest wire used is just four times as strong as that used in netting.

Lasts longer. Square Deal Poultry Fence is made of highest grade heavily galvanized wire. This, in connection with the much heavier wire used, makes it withstand the elements four or five times as long as poultry netting. It is not injured by stock or other excessive strains.

Closer spaced. 1½ inch for first four spaces at bottom, then gradually increasing to 4 inches at the top. We give close spacing at the BOTTOM where you need it. The stays are only 6 inches apart.

Costs less than netting. You save half the posts and need no top railing or bottom board. The post is worth 15c. and the railing and board saved on each rod is worth at least 35c., which makes it 50c. saved on each rod. That's more than enough to pay for a rod of Square Deal Poultry Fence. In other words, you spend more money for the framework than would be necessary to complete the job with our long lived, close spaced poultry fence.

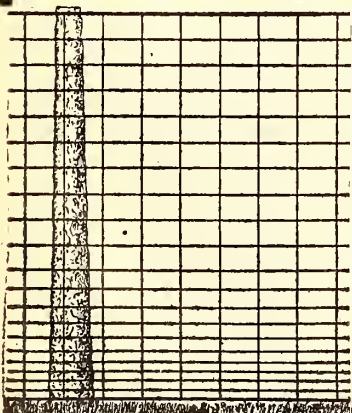

The up-to-date Fence. Our Square Deal Poultry Fence is the Up-to-date fence for poultry yards, and it is rapidly supplanting netting because it saves the users money—saves money in first cost then multiplies the saving by about 4, as it lasts fully that much longer.

Poultry netting is an obsolete, out-of-date, expensive method of fencing poultry pens. It's flimsy stuff at best. If you consider 40 to 70 per cent of your fence money worth saving, then write us today for our catalogue and prices.

KEYSTONE FENCE CO.

500 RUSH ST. PEORIA, ILL.

NOT IN THE TRUST.

Home Department. I boil half a cup of dry white glue in a quart of water, until it has entirely dissolved, then add flour and water which has been mixed until there are no lumps of flour left. It is hard to give an exact measurement for this, as some prefer the starch thinner than others, but a little experimenting will solve the problem. I let this boil up thoroughly, then add one teaspoonful of carbolic acid, to keep the paste from souring. A little alum and oil of cloves will give the same result. Pour the paste into wide-mouthed bottles or cans which can be covered, and it will keep indefinitely, and be ready for all emergency calls."

Mrs. C. J. P., of Raton, N. Mex., sends some recipes which she says never fail, and are favorites in her family. She uses the left-over oatmeal, breakfast food or rice by making a thin pancake batter, and before adding the baking powder she beats in half a pint of the cereal for each pint of batter. The cakes will require a little longer time for cooking than ordinary pancakes. Every one knows how to make corn fritters, or at least they ought to, for these form a delicious and quickly prepared vegetable course, and make a common dinner assume quite a company air. But not many people have tried using other vegetables in the same manner. Almost any cold vegetables, left over from the dinner of the preceding day, can be utilized in this way, by chopping them fine, adding sweet milk, one or two well beaten eggs, salt and pepper, baking powder, and enough flour to make a rather stiff pancake batter. Grease the griddle very thoroughly, and drop spoonfuls of the batter on it, let them brown, turn as you would pancakes, and be sure to serve them piping hot, with plenty of butter and syrup.

Mrs. L. R. Rice, of Stuart, Iowa, says: "I am sending a little contribution for our department. I hope that the things which I have found helpful in my own work will be of some aid to others. Here is a homely but useful suggestion for those who live in a country where mud abounds in the spring. A good scraper can be made for the back door by taking an old broom and cutting off the handle to within a foot of the broom end. Trim the broomcorn evenly, drive the handle into the ground, and you will have a scraper that is warranted to take

MRS. W. S. ROBISON

Box 1, FAYETTE, MO.

BUFF WYANDOTTES

During the past ten years exhibiting at New York, Boston and Pan-American we have won 31 1sts, 20 2ds and 16 3ds prizes, averaging three 1sts and two 2d prizes each time exhibiting, more than all competitors combined. At New York, Jan., 1907, we won 1, 6 ckl., 1 pen, 3, 6 cock, 3, 4, 5 hens, 3 pullet, and the 1 pullet, 2d ckl. we purchased. Thus as usual we brought home three out of five first prize winners, all of which are in our yards today. Annual public demonstrations in America's leading exhibitions fully demonstrate the great merit of our strain beyond anything we can add or competitors detract from. We are, and have been since the origin of this breed, producing good goods at reasonable prices for stock and eggs.

Willmount Farm, Wm. W. Caswell, Prop., Mamaroneck, N. Y.

I HAVE PURCHASED THE ENTIRE FLOCK OF JOHNSON'S BUFF ROCKS

Mr. Johnson having died on February 9, 1907. He did not exhibit, but in the last few years has bred and sold winners at New York, Chicago, Cincinnati, Indianapolis, St. Louis, Hagerstown and other large shows. He has raised and sold more Buff Rock winners every year than any western breeder. During the past two years his birds have been better than ever, and are so distinctly of a type that they deserve to be called a distinct strain, although they are unquestionably as pure a flock of Burdick Nuggets as exists today. Added to them are my own birds with excellent show records for the past six years. I believe I have the

BEST BUFF ROCKS IN THE WEST

and as good as any in the country. Write for my booklet of winnings and matings. Eggs \$4 per 15, \$7 per 30, \$10 per 45, \$20 per 100. There are a few surplus cockerels and some good breeding females from my purchase, which I will sell at low figures.

E. L. DELVENTHAL, Care Citizen's Bank, Warrenton, Mo.
STATE VICE-PRESIDENT OF THE AMERICAN BUFF PLYMOUTH ROCK CLUB

all the mud off John's shoes before he comes into your clean kitchen. An old clothes brush, trimmed off evenly, brings a brighter polish to the newly blackened kitchen stove than fifteen minutes' rubbing with a cloth would accomplish. Of course the majority of people have regular stove brushes, but some of us who live in the country do not always find it possible to keep all the little household conveniences on hand, and must invent ways and means of our own."

Mrs. V. M. Young, of Sand Lake, Mich., says: "We live on a farm and cannot get fresh meat more than once or twice a week, but I have plenty of eggs, and find that they can be cooked in so many different ways that my family never tires of them. One of our favorite dishes is eggs and tomatoes. I put a pint of canned tomatoes into a saucepan—we raise and can our own tomatoes every year, and find them better and much more economical than the tinned tomatoes—add salt and pepper and half a tablespoonful of butter, and cook until there is only a cupful of the tomatoes left. Take this from the fire, and add three well beaten eggs, stirring until the mixture thickens like custard. Do not let it overcook. Pour over buttered toast and serve at once. Rice omelet makes a hearty dish. Beat up a cup of cold boiled rice with a cup of warm milk. Add a tablespoonful of melted butter, a level teaspoonful of salt and a dash of pepper. Mix thoroughly and add three well beaten eggs. Turn into a very hot pan, in which has been melted a spoonful of butter, and set it in the oven until the omelet sets. Fold it over and turn it on to a hot platter. Omelets should be served the moment they are done, as they will fall if they are allowed to stand. Eggs and cheese make a good combination. Break the eggs into a buttered skillet, and when they set, salt and pepper them and sprinkle over them a generous supply of grated cheese. Set the skillet into the oven until the cheese melts."

CONCERNING CHICKEN.

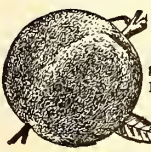

Chicken will boil much more quickly if the skin is removed before it is put over the fire. The skin, however, makes the gravy richer, and should be rolled up, tied, and dropped in the water in which the chicken is cooked.

Never let chicken stand in cold water before it is cooked. Wash it as quickly as possible, and have the water boiling before the chicken is put on the stove. This will give it a better flavor.

There are many ways to serve the leftover scraps of chicken, but one of the best is made by picking off all the bits from the bones, even the smallest being worth saving. Put them into a well buttered baking dish, in alternate layers with cracker crumbs. Add bits of butter, pepper and salt, and moisten well with gravy, or milk. If there is any cold mashed potato in the house, moisten this with milk and beat it up with an egg, and spread over the top. Bake and serve in the same dish.

**APPLES**

Baldwins for long, sure returns. Tree stock that delights all. Over 100 varieties, over 500,000 trees. All seasons' apples; all aged trees, strong rooted, fine shape, healthy. All choice trees.

**PEACHES**

Ray, a leader; choice fruit, great bearer. Great market peach. All the good varieties.—Elberta, Chairs, Crawford Late, Mt. Rose, etc. We pack for safe delivery everywhere.

Strawberries

Ekey, for a leader. Rich, bright crimson, very showy when ripe. Excellent fruit, strong plants, large, vigorous. All kinds worth planting. Bubach, Haverland, Gandy, and others. Send for 1907 free catalog.

HARRISON'S NURSERIES, Box 65, BERLIN, MARYLAND.

SOME SOUR CREAM RECIPES.

Cookies.—One egg, one and one-half cups sugar, one cup sour cream, an even teaspoonful of soda, pinch of salt, half a grated nutmeg, flour to roll out thin. Be sure to butter the baking tins.

Cream Sponge Cake.—One-half cup sour cream, one cup sugar, one and one-half cups flour, half teaspoonful soda, salt, two eggs, and flavoring to taste. Mix the cream, sugar and beaten yolks together. Add the flour, soda and salt, which has been sifted together several times. Fold in the stiffly beaten whites. Bake for one hour in a steady oven. A pan with a tube in the middle is the best for this cake.

Molasses Cream Cake.—One and one-

half cups molasses, one cup sour cream, one teaspoonful each of cinnamon and ginger, one teaspoonful soda, flour to make a stiff batter.

THE RELIABLE INCUBATOR AND BROODER COMPANY'S SILVER JUBILEE.

It is an important event in the life of any manufacturing concern when it reaches its twenty-fifth year of existence. To emphasize this the Reliable Incubator & Brooder Company, of Quincy, Ill., issue their Silver Jubilee catalogue. These people have always been in the habit of putting out good catalogues, but this last one excels any previous effort. First appearances are always important, and the cover of this new catalogue claims the attention at first sight. It has a beautifully engraved illustration of newly hatched chicks with an appropriate border printed to represent silver. This catalogue is of 136 pages and cover, and includes every item of value connected with the manufacture of their incubators and description of their poultry plant. In addition to this the seeker after knowledge pertaining to the hatching and raising of poultry can find everything needed. In fact, the book, if carefully read, constitutes a complete education in the poultry business. Every reader of the American Poultry Journal should send for a copy of this catalogue, whether they expect to buy an incubator or not. The chances are that the valuable information contained in this will be of such interest that it will create a desire to go into the poultry business and to purchase all needed supplies for this purpose. This catalogue is their Silver Jubilee issue, celebrating their twenty-fifth year in business. It tells all about the machines built by the Reliable Incubator & Brooder Company. It shows how their double heating system is a method of economy and why so large a portion of chicks can be raised in their machines. This catalogue is sent free by addressing the Reliable Incubator & Brooder Company, Box A-1, Quincy, Ill.

E. B. THOMPSON'S NEW CATALOGUE.

The making of a catalogue by a poultryman involves more work and study than the average breeder is aware of. E. B. Thompson, of Amenia, N. Y., the originator and breeder of the world renowned "Ringlet" Barred Plymouth Rocks, has just completed his new catalogue. With the great increase in the poultry business during the last few

Remember that Clement & Fike, Libertyville, Ills., are the only White Wyandotte breeders in the world that have ever won at Chicago Show, National Fanciers' and Breeders' Association, four firsts and seven other prizes; silver cup for best display of White Wyandottes, and medal for best display of Wyandottes any variety.

**CORTLAND
INCUBATOR
AND MFG. CO.
CORTLAND, N. Y.**

You are looking for the INCUBATOR that will return you the LARGEST NUMBER of big healthy chicks—the kind hatched to live—EVERY TIME you fill it with fertile eggs. THE CORTLAND INCUBATOR IS THE LAD THAT DOES THE BUSINESS. A new machine, did you say? Not at all! It has taken FIVE YEARS TO PROVE IT UP, during which time WE PAID FOR THE EXPERIMENTING.

Old Norfolk Farm, Ithaca, 10th February, 1907.
Gentlemen:—My No. 1 150-Egg CORTLAND INCUBATOR is great! The first two hatches averaged 89%. The last hatch fairly took my breath away. I GOT 126 STRONG CHICKS FROM 126 FERTILE EGGS.

My CORTLAND COLONY BROODER is a marvel of efficiency and good construction. IT HOLDS THE TEMPERATURE EASILY IN ZERO WEATHER OUT-OF-DOORS. Your wired BROODER LAMP is a GREAT IMPROVEMENT over the _____ which I have hitherto used exclusively.

YOUR MACHINES ARE PROFIT PAYERS.

Yours sincerely,

C. C. Phillips

The CORTLAND BROODER, the CHICK LIFE SAVER, cares for the little fellows through the COLD NIGHTS OF MARCH as comfortably as during the HOT NIGHTS OF MAY. It is THE kind that allows you to sleep nights with that UNDISTURBED feeling. The CORTLAND LAMP—the HEART of our brooder—is SMOKELESS, ODORLESS and BLOW-OUTLESS. Fill, trim and clean the lamp—the CORTLAND BROODER DOES THE REST.

Investigate, through a personal test, the CORTLAND FEED HOPPER. It is made with a CONCAVE METAL FRONT and feeds smoothly, without hitch or waste, all kinds of whole and cracked Grains, Mash, Grit and Charcoal. It gives maximum results for minimum labor—the KEYSTONE to success in the Poultry business.

Every piece of Cortland Chick Machinery is put through a WORKING TEST before it leaves the factory.

Write TO-DAY for our ILLUSTRATED CATALOGUE just from the press. It describes CORTLAND INCUBATORS, BROODERS, COOPS, PORTABLE HOUSES and FEEDS.

Let us assist you to succeed in the poultry business. Your enquiries will be answered personally and promptly.

The Full Nest Pays Best

No. 4 Midland Poultry Food Helps Hens Keep Nests Full

The poultry keeper who feeds Midland No. 4 always gathers lots of eggs. It's a scientific ration prepared on purpose to make eggs. And it does it. It does one thing more, it puts fowls in fine plumage—helps them through the moult, and gets the hens to laying early.

When you want eggs, the easy way to get them is to help your hens. Don't give them a haphazard mixture that you don't know anything about, then expect eggs in return. Hens require certain materials from which to make eggs. We include every one of them in Midland No. 4, and save you the trouble of mixing it. We prepare it so that the proportions are always scientifically correct—so that every time you buy a sack you know exactly what you are getting and just

what it will do—the formula never varies. And remember that No. 4 is a food—hens live and thrive on it, and lay eggs because it furnishes the things eggs are made of. That is why the largest poultry-raisers and egg-producers in the country buy it by the car load, year after year. It pays them—it will pay you too, no matter how many hens you may have—10 or 10,000.

We have other foods for fattening fowls, for ducks, geese, turkeys—we'd like to tell you about all of them. Our free books, "The Science of Poultry Feeding" and "Poultry Fattening Perfected" ought to be in the hands of every person who raises poultry, whether for pleasure or profit. We'll send them to you free, and tell you how, why and where to buy Midland Foods. Write today.

Kansas City, Mo.,

U. S. A.

Or CORNELL INCUBATOR CO., Atlantic Coast Agents, Ithaca, N. Y.

years the desire of buyers to be fully posted in regard to the stock and eggs that they wish to purchase has come a marked improvement in poultry catalogues. A poultry catalogue of today will stand inspection beside the catalogues that are published in any line of business. Mr. Thompson has had years of experience in mating and breeding fowls and has won innumerable prizes, as the result of fierce competition in the show room, and the result of all this is fully demonstrated in this magnificent new catalogue that he is now sending out. It is finely printed and beautifully illustrated and contains descriptions of his different matings, price of eggs and stock, and in fact contains everything that a buyer would wish to know before placing his order with Mr. Thompson. There is no better known man in the poultry business than Mr. Thompson, and he is a constant and persistent advertiser in order that he may become still better known among the thousands of new readers of American Poultry Journal who every year are starting in the business. This richly illustrated 48-page catalogue will be sent to any reader of the American Poultry Journal on request by addressing E. B. Thompson, Lock Box 510, Amenia, N. Y.

TWO BOOKS FREE.

Gordon, Van Tine & Co., 100 Case street, Davenport, Iowa, can save poultry raisers from 25 to 50 per cent on the cost of their brooder and colony houses. They manufacture windows, doors, window rangers, rubber roofing, hot-bed sash, etc., and sell direct to the consumer, and at prices that are really surprising. If any of our readers are contemplating building in the near future they should write at once for their two large books, which will be mailed free if you mention American Poultry Journal. Their millwork catalogue is full of valuable information and will tell you how to save at least 25 per cent on the construction of your colony and brooder houses. They are manufacturing a hot-bed sash of much higher quality than the ordinary kind, and guarantee prompt, safe delivery at less than half dealer's price. The poultry breeders all over the country should take advantage of the opportunity offered by this firm and write today for these two books and mention American Poultry Journal. Address Gordon, Van Tine & Co., 100 Case street, Davenport, Iowa.

Do you wish to better your condition and earn more money than it has ever been possible for you to do heretofore? This in organizing clubs of ten to purchase groceries and other products, \$1 each week or month. With each \$10 purchase customer receives a \$10 premium. Write today. C. E. Murbach Co., 62-64 Plymouth place, Chicago, Ill.

Dudley Walker, Box 1, Riverside, Ill., breeder of Barred Rocks and Single Comb White Leghorns, informs us that he has no more stock for sale. He has several pens mated for the egg trade. Price, \$3 per setting. Write Mr. Walker and mention American Poultry Journal.

FACTS AND FANCIES.

By D. Lincoln Orr.

(By Special Appointment.)

It is with great pleasure that I announce to the readers of the American Poultry Journal that I have made arrangements with Mr. Bates to jot down a few notes each month. I make no promises of trying to fill a long-felt want or being utterly unlike all others. I will try to write a few things that are serious and a few things that are not serious. Things pertaining to poultry and to poultrymen and things possibly that will have no connection with either.

I would not undertake the task only for the fact that each and every subscriber will get more than their money's worth, regardless of what I may write, and if by chance I may say something that will help any one or cause a smile, I will be glad, because you will be getting just a little more than you had anticipated.

I really don't know when it was, but it was a long time ago I came back from a poultry show with circulars and poultry papers galore. One incubator concern had in one of their catalogues how a person with poultry, some incubators and brooders, in their spare time could make, well—fabulous sums. I started after that fortune, but instead of getting it out I put it in and it's there yet. I went at it wrong, that's all.

The advertising catalogues of incubator firms and poultry papers are the same as of old, with a difference, and thank heaven for the difference. Today they don't say it's all a gold mine. They as a rule put the proposition up to you in good, plain English, two and two makes four, not sometimes, but all the time.

Speaker Cannon says "there is no telling what the senate won't do, but it's harder to tell what it will do."

It's just as hard to say that those \$10 eggs won't hatch as to tell what they will hatch. I once bought 15 eggs for \$15, got 3 single combers and one green legged fellow, and I honestly believe that the sender sent them from the stock I asked for. The four chicks made fine broilers, however.

Apparently that was one time that two

THE NEW \$5.00 CHAMPION BROODER

Thousands of chicks are lost through improper brooding. We will show you how to raise all you hatch, show you how to stop the big death rate among your chicks, show you how to raise chicks without leg weakness, bowel disease or drooping wings and show you how to raise them at all times of the year out-doors without the use of expensive brooder houses. We can prove to you how others have done all this and more. Here's how the Champion works:

Villa Ridge, Ill. "Champion Brooder is in use and I must say it is a dandy. I never saw anything so complete. I have 15 different makes but yours is the only one my foreman enjoys taking care of."—K. H. Winters, Nashville, Tenn. "I have 2 of your Brooders that I used last year and I did not lose a chick."—F. A. Jones, Fishkill Landing, N. Y. "We think your Brooders are all easy to handle and perfectly safe. We have not lost a chick through the Brooders, and we have 19 of them, and we expect to use twice as many this season."—Haight & Knight, Seymour, Conn. "The Brooder I bought of you three years ago has been out doors all winter with chicks in it that were hatched late in the fall. The weather has been 10 degrees below zero and I never lost a chick." J. C. Holden.

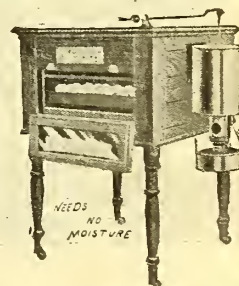

1907 Model Combined Brooder and Coop

Our new 1907 model Champion can be turned into a weaning coop in one minute. Just lift out the heater and you have a first-class coop for one minute. Coop is large enough for 50 chicks until 10 to 12 weeks old. This is a great feature and saves you the expense of an extra coop. Our improved safety pneumatic lamp is now used in them; it cannot explode or catch fire. Needs no water pans or water jackets. Best and simplest lamp ever used in a brooder. We spare no expense to make the Champion the best in the world. Don't pay \$12 for a brooder which the Champion can knock clear out of sight. Don't waste your time raising weaklings—use the Champion and raise big chickens. The ones that weigh 2½ lbs. at 10 weeks. The big kind, the kind you want, the kind your customers want and the kind the money is in. The Champion is a big Brooder, holds 75 to 100 chicks, is made in a big factory and sold for little money; \$5.

THE CHAMPION INCUBATOR

The Champion Incubator is a non-moisture hatcher, strictly up-to-date, automatic in regulation. Has new removable nursery chick tray. 120-egg size, price \$15. Warranted the simplest and easiest to care for. Our free "Book of the Champions" tells the rest. Send for it.

Germozone is the best cure for Bowel Complaint, Chicken Cholera, etc.

TEDDY 2d

Best Breeding male and prize winner at Chicago Show, 1907. Bred and owned by us.

and two did not make four, but was there two and two? This party bought fine specimens from different breeders and won big honors in the show room, but in the breeding room—well, it was not two and two, that's all.

A reputation is won or lost in the throw of the dice, so to speak. I was talking once with the secretary of a prominent show and I asked him who was going to judge such and such a class. He responded that Mr. Blank was, because Mr. Blank had won four firsts and any one that can win four firsts certainly knows how to grow good chickens. I did not say anything, but I wondered if the secretary was ignorant as to the real facts. Everybody else was wise.

A reputation is also won or lost by the judgment of one single solitary man who passes on the qualities of the birds. It's mighty serious business, this judging Rocks, Wyandottes, Leghorns, etc., at such shows as New York, Boston and Chicago. Mighty serious. A poor struggling fellow can be unhorsed in a jiffy through ignorance or one man's pet idea as to what a Rock or Wyandotte should be.

Did you ever stop to think what little difference there ought to be between a first and second in a class of from 50 to 100 birds, as a rule; just think it over while you are waiting and take plenty of time.

It is quite often the unexpected that happens. The earthquake struck Kingston instead of Auburn. Everybody except the committee of 14 had a knife ready, but they were soon turned to plowshares, and very wisely, too. The gentleman from N. J. is too serious a man to put on such committees; he worries too much when the committee makes a mistake. (?)

The poultry men all over the country now have a chance to get together and build up the greatest association in the world, and I do hope every one will work together for the good of the cause. Never mind personal pride or anything

TRUCKENBROD BROTHERS

Standard Prize Winning Mammoth
Blue Barred Rocks

are again winners at Chicago, Jan. 23-30, '07, of more prizes on cockerels than all other exhibitors combined; won 2d cock, 2d, 3d and 5th cockerel; also four special prizes, making eight prizes on eight males entered. Our cockerels were the sensation of the Chicago show, in size, shape, closest, deepest barring and pure yellow beaks and legs. Our Chicago winners are the best breeding males in the United States and we are sure they will reproduce themselves in their sons. We have six extra fine cockerel matings to produce exhibition cockerels of standard color and size, and two pullet matings to produce exhibition pullets. Price of eggs from either cockerel or pullet mating \$3 per 15, \$5 per 30; guarantee fair hatch. A few fine cockerels for sale at \$5 to \$10; pullets \$3 to \$5. Write for free egg circular.

else. Just one thought, and that is more poultry and better. No set of men ever had a broader field to work in with the millions and millions of poultry and eggs used in the United States. It would seem to me that by organizing branches a world of good can be accomplished.

They say that no one but a fool or a knave will make a prophesy. I don't like to class myself with either, so will have to condition my glance into the future. If we work as we should and pull together, wonders will be accomplished.

The American Poultry Association is now entering upon a grand and useful

Money in Poultry.

Those interested in poultry and incubators will find it to their advantage to obtain Foy's new book "Money in Poultry," advertised elsewhere in this issue. It is one of the finest and most valuable books ever published. It is finely illustrated and contains a very large amount of practical information about the poultry business in general and is valuable as a reference book, telling the beginner how to start on a small or large scale, and how the largest pure bred poultry business in the world has been built up from a small beginning. Tells how to start right; how to make money raising fowls on the farm; how to line breed; how to win at shows; how to prevent and cure diseases; how to run an incubator and manage a brooder. This is the most valuable book for the beginner in poultry raising ever published. Revised and enlarged edition just issued. This book will be mailed for 4c, by addressing Frank Foy, Box B, Des Moines, Iowa.

Sure Catch Trap Nest.

F. O. WELLCOME,

York St., Yarmouth, Maine

future or an ignominious death. Which will it be? That remains with the people. The officers can not do everything. It is my earnest desire and wish that every one will help the cause along. Everybody means you, my reader. Either join the procession or else don't throw stones as it passes by. Should you be wise enough to join, then keep in step. We have had enough proud step marching.

Just right here I would like to make a personal announcement. No matter what I have ever said or done against the Association, I want every one to know that I am fully in accord with the new constitution as the best that could have been adopted. No doubt some changes will be necessary after we get in working order. We must push on or drop out. "That's all," and we will push on.

Barred P. Rocks

E. B. Thompson's strain. Eggs from best matings \$1.50 and \$2 per 15; from special mating \$2 per 15; from farm range stock \$3.50 per 100; for incubators \$3.50 per 100. Orders booked now. Choice stock always on hand. Prices reasonable. CHAS. HEUERMAN, R. 4, Bowling Green, Ohio.

Billings' R. I. Reds and White Wyandottes

have the winning quality. Winners at Cleveland and Ohio, Eggs \$2 for 15; \$5 for 45. Exhibition and breeding birds to sell. Satisfaction guaranteed. Circular free. B. M. BILLINGS, Oberlin, Ohio.

MILLVILLE POULTRY FARM CO. - Box C, MILLVILLE, N. J.

WHITE P. ROCKS & M. B. TURKEYS

Have been breeding the above two breeds since 1899. I have mated up ten yards of White Rocks for my egg trade, and they are by far the best that I have ever owned. Eggs from all of these yards \$2.50 per 15, \$5 per 35, \$12 per 100. If selected from two very best yards \$4 per 15. Incubator eggs from large white stock, \$6 per 100, \$50 per 1000. Turkey eggs from well marked hens weighing up to 24 lbs., and mated to 40 lb. toms, \$4 per 11. You can buy higher priced eggs than mine, but you cannot buy eggs that will produce you any better results. 200 White Rocks and 50 turkeys yet for sale. Egg circular free for the asking.

J. T. THOMPSON,

Box 10, Hope, Ind

WHITE WYANDOTTES

THAT STILL MAINTAIN THEIR RECORD OF WINNING THE BLUES WHEREVER SHOWN

EGGS From prize winning pens only, for sale. My strain is bred equally as much for utility, vigor, size and hardy constitutions as for beauty. My prices are as low as the lowest when quality is considered. A grand lot of young stock for sale. Correspondence a pleasure. Mention American Poultry Journal. ❀ ❀ ❀

D. D. SLADE 227 W. Short St. LEXINGTON, KY.

FREE SAMPLE OF CONGO.

Don't take whatever roofing the nearest dealer works off on you. Investigate carefully and save yourself trouble for many years. Write for a sample of Congo roofing—the manufacturer will send one free. See how strong it is, how well made, how good and durable its materials are. It is called "The Neverleak Roof"—a daring name, but it earns it and justifies its reputation for staying tight.

Write for that sample before the offer is withdrawn. Address the Buchanan-Foster Company, Chestnut street, Philadelphia, Pa.

Charles Howison, Sandwich, Ill., breeder of Buff Wyandottes exclusively, has been very successful in the show room the past winter. His birds have been carefully line bred for ten years and his strain now produces that popular shade of light golden buff so hard to obtain, with no red in surface color and no white underneath. He won first pullet at Prophetstown in a class of over fifty pullets, also first cock, in hot competition. His winning cockerel at Rockford scored 94%, by Riggs, and is a wonder for shape; third pullet scored 93%. At Downer's Grove he won first and second cock; first, second and third cockerel; first hen; second and third pullet and first pen, also special for best shaped cockerel in Wyandotte class. He has some choice cockerels for sale, all bred from prize winning cockerel in Chicago in 1906. Send for his egg circular and give him a trial. He will treat you right.

Dr. M. S. Sherwood, of Pocantico Hills, N. Y., won at New York Poultry, Pigeon and Pet Stock Association, Madison Square Garden, New York City, January 1 to 5, 1907, as follows: Fourth Buff Orpington cockerel, fifth Black Orpington pen. At the Westchester County Poultry, Pigeon and Pet Stock Association show, held at White Plains, N. Y., January 16-19, 1907: First Buff Orpington cock, two specials and silver cup; first Buff Orpington hen, one special; second Black Orpington hen.

E. C. Zoeller & Son, Jackson, Mich., report the following winnings on their White Plymouth Rocks at Washtenaw Poultry & Pet Stock Association, Ann Arbor, Mich. This was the largest show in the state, 2,680 birds in competition. In a class of seventy-three White Plymouth Rocks we entered six birds and won seven ribbons. First cockerel, 95½; first and third hens, 95, 94; first pullet, 95¼; second pullet, 95¼, 94½; first pen, 191.

At the Indianapolis show, held February 2-8, 1907, in competition with five exhibitors of Light Brahmas, I. N. Barker & Son, of Thorntown, Ind., won second cock (first cock being a bird they sold); first, third and fourth cockerels; first, second and third hens; second and fourth pullets; first and third pens and special for best display. Also three out of five specials offered by the American Light Brahma Club. Send for 1907 catalogue.

Results from Bennington's Royal Buff Orpington eggs, spring of 1906: David Pugh, of New Berlin, N. Y., purchased fifteen eggs, hatched and raised twelve chicks. From them were first, second and fourth prize pullets and a part of third prize pen at New Berlin show, with quite strong competition.

L. Harris Crewe, Still Pond, Md., is an extensive breeder of Rankin's strain White Pekin Ducks and Duston strain White Wyandottes. He reports that he still has a very handsome Pekin drakes at very reasonable prices. Write him today and mention American Poultry Journal.

Mrs. J. H. Orebaugh, Batavia, Ohio, contemplates going into the millinery business and is therefore offering her poultry plant and stock of White Plymouth Rocks at a great sacrifice. Better write her today if you want a bargain. Mention American Poultry Journal.

Paul T. Hobart, Roscoe, Ill., the Single Comb Brown Leghorn specialist, informs us that he will move from Roscoe, Ill., to Dickey, N. D., the last week of March, where he will continue breeding his chosen variety. His yards at Dickey will be known as "Brownland."

Charles Nixon, Washington, N. J., reports the following winnings on his White Wyandottes: Boston, Mass., 1907—Two regular and two special prizes on two entries, Scranton, Pa., 1907—Four regular and two specials on four entries.

JEWEL INCUBATORS SUGGESTED SUCCESSFUL FREE TRIAL

NO NOTE, NO INTEREST OR DEPOSIT

The Jewel has boldly met the test, and has proved its merit, and made friends wherever used. Its equal heat, perfect ventilation and positive regulation proves an absolute protection to each hatch. None but the Jewel can be sold on such liberal terms. Those who use Jewel Incubators endorse this statement.

99 per cent Hatch by L. H. Moran, Monfort, Wisc. 100 per cent Hatch by F. E. Wheeler, Moscow, Penn.
93 per cent Hatch by W. J. Bailey, Owingsville, Ky.

Test a Jewel Incubator and Brooder before paying one cent in advance. We will prove they are right first. Send for our big Catalog and free trial order blanks.

Poultry Supply Department, INTERNATIONAL STOCK FOOD CO., Box E, Minneapolis, Minn.

I HAVE FOUND IT.

On another page of this issue appears the ad of the Chicago Poultry Supply House, 407 Dearborn street, who are putting a new feed on the market called "I Have Found It," Eureka chick feed. We are sure that this is all they claim it to be. There is no need for your experimenting further, as they have done it for you, and know beyond a doubt that it will not only raise your chicks to be strong and healthy but will decrease the mortality largely. The lack of a perfect feed is the cause for the death of so many youngsters. The Chicago Poultry Supply House are interested in the progress of their fellow breeders and fanciers and for this reason are putting forth all their efforts to assist you in every possible manner. You will have no reason to doubt this after giving the Eureka chick feed a trial. They handle "everything for the poultryman," and we recommend that you send for their catalogue and sample of this feed.

G. A. Gibson, Hector, Minn., reports the following winnings on his Orpingtons at St. Paul: Entered but five birds, one cockerel and four pullets, of Single Comb Buff Orpingtons. Won 1st, 2nd, 3rd pullet; 2nd pen; defeated 1st, 3rd Minneapolis pullets. Our birds were also in Minneapolis show. Won fifth on cockerel, he scoring one-quarter point below first; on account of being one pound overweight was given fifth place. On Rose Comb Buff Orpingtons at Minneapolis won 1st hen, 1st pullet, 2nd cockerel.

Carl H. Krippene, Oshkosh, Wis., the White Plymouth Rock specialist, showed a fine string of his birds at the late Chicago show, and won fourth cockerel and fourth pullet in one of the hottest classes of this variety. His birds are winners wherever shown. He is offering some choice cockerels for sale, with score cards, at very low prices, considering quality. His breeding pens are made up of his winners at Chicago and Wisconsin state shows. Write him for prices and mention American Poultry Journal.

W. H. Gifford & Son, of Auburn, N. Y., won at Auburn big show, January 7-12, 1907, as follows: Five entries in Single Comb Black Orpingtons—First pullet, second cock, third cockerel, fourth hen, second pen. Also three entries in Single Comb White Orpingtons—First cockerel, third pullet. All of our Blacks were placed and two out of three in Whites also captured National Single Comb Black Orpington Club silver cup. Newton Cash, judge.

On account of the death of Mr. Johnson, of Buff Rock fame, E. L. Delventhal has bought of the heirs the entire flock of New York, Chicago, Cincinnati, Indianapolis and Hagerstown winners. During the past two years his birds have been better than ever, and are so distinctly of a type that they deserve to be called a distinct strain. Write Mr. Delventhal, Warrenton, Mo., for his booklet of winnings and matings.

Chas. Nixon, proprietor of the Mapleside Poultry Yards, Washington, N. J., and originator of the famous Mapleside strain of White Wyandottes, has just issued a very neat 24-page booklet, giving illustrations and winnings of his White Wyandottes; also terms, prices, etc. All who are interested in this grand breed should send for one of these booklets and mention American Poultry Journal.

Gedney Farm Poultry Yards, Frank W. Gaylor, manager, White Plains, N. Y., made an enviable record at the late Madison Square Garden show, when they won first and second pens on their Single Comb Buff Orpingtons. Look up their ad in this issue and favor them with an order. You will be treated right. Mention American Poultry Journal when you write this farm.

Walter P. Baynes, inventor of "Favorite" trap nest, Salem, Ind., made a creditable exhibit at the Indianapolis show. He sold many nests to prominent breeders.

Bridgman & York, breeders of White Wyandottes, Forest City, Mo., have several pens mated up for the egg season. Every pen contains a winner.

M. M. Smith, Farmersville, Ill., has a few cockerels and pullets to spare. Write him if you want good Barred Rocks.

Griggs Bros., Toledo, Ohio, have just received several carloads of incubators, brooders and bee supplies for their spring trade.

Rocky River Poultry Company, Deerfield, Ill., made the following winnings at the late Chicago show: First, second, third cock; first, second, third hen; first, third, fifth cockerel: first, second, third pullet; first pen: Ivory Soap \$25 silver cup for whitest bird in the show; \$100 silver cup for largest and best display of any one variety; challenge trophy cup for best display of Mediterranean class, this cup having been won for the second time; silver cup for the best display of Rose Comb White Leghorns. Also specials from the American and National Rose Comb White Leghorn clubs.

Woodlawn farm, Marshall, Texas, own one of the finest pens of Columbian Wyandottes ever brought south. They were good enough to win first cockerel and first pen at the New York State Fair last September, and they have never been defeated at the large southern shows. N. C. Matthewson, manager of this farm, says that this farm hopes to hold the lead in Columbians in the south, and believes they are as good as the best anywhere. This farm issues a booklet that tells something of their birds. If interested in this breed write N. C. Matthewson, Marshall, Texas., to send you one.

The Griggs Bros. & Nichols Company, Toledo, Ohio, won at Toledo, Ohio, January 23 to 29, 1907, as follows: Single Comb Brown Leghorns—First cock, second cockerel, third hen, second pen. Single Comb Black Leghorns—First, second and third hen; third cockerel, and first pen. J. C. Gault, judge. Forty-six in Single Comb Brown Leghorn class; twenty-four in Single Black Leghorn class.

John C. Plane, of Belvidere, Ill., won at Northern Illinois, Belvidere, Ill., January 14, 1907, as follows: First, third cock, firsts, fourth cockerel, first, second hen, first pen. \$35 silver cup for best cock, cockerel, hen and pullet of any variety, special for best display in Mediterranean class. Geo. D. Holden, judge. Forty-two in S. C. W. Leghorn class.

Wiseacre's Poultry Farm, of Croton-on-Hudson, N. Y., won at Madison Square Garden, New York City, and at Boston, January, 1907, as follows: Salmon Faverolles, Madison Square, 1907, first, second cock; second, third hen; first, third cockerel: first, third pullet: first pen. Boston, 1907: First cock, first hen, first cockerel, first pen.

Peter S. Hurt, of Thorntown, Ind., won at the big state shows at Nashville, Tenn., and Cincinnati, Ohio (these two on same date), and Indianapolis, Ind., on fourteen birds eighteen premiums in hottest of competition on his famous Single Comb Buff Leghorns. F. J. Marshall, S. B. Lane, T. E. Orr and A. F. Kummer, judges.

R. H. Robson, Urbana, Ohio, writes that he sent four of his Buff Rocks to the late Cincinnati show and won first and second hens, fourth cockerel and fifth pullet. This is a pretty good record on four entries. Look up his ad elsewhere in this issue and mention American Poultry Journal when you write.

Victor D. Caneday, Taylor's Falls, Minn., has just issued a very neat 4-page circular which gives illustrations, egg records and pedigree descriptions of some of his noted White Plymouth Rocks. This circular will interest you, send for it and mention American Poultry Journal.

H. K. Daily, proprietor Mapeling Poultry Yards, Pulaski, N. Y., informs us that he is better prepared than ever before to fill orders for eggs from the several varieties he breeds, and will guarantee a satisfactory hatch. Send for his catalogue and mention American Poultry Journal.

Mrs. W. H. White, breeder of White Wyandottes, Whitehall, Ill., has all her pens mated for the egg season. She has a few cockerels to spare. Mrs. White's show winnings were reported in the February number of American Poultry Journal.

Glendale Poultry Farm, Old Orchard, Mo., has sixteen pens mated for the egg trade. This is the largest exclusive White Wyandotte plant in the west, located eight miles from St. Louis. Write for catalogue, it is free.

Send to A. B. Kaye, Walworth, Wis., for a setting of Black Minorca eggs. Mr. Kaye wins every year at Chicago.

Ask Fred about his new chick feed. Address Chicago Poultry Supply House, 407 Dearborn street, Chicago.

Paul T. Hobart, of Roscoe, Ill., won at Cleveland, Ohio, January, 1907, as follows: First hen, Specialty Club ribbon for best hen, in Single Comb Brown Leghorn class, fifteen hens competing.

Ed. E. Ling, Sr., Portland, Me., has several pens mated for the egg season. Each pen contains a Boston or New York winner. If you need White Wyandottes don't forget Mr. Ling.

If your incubator does not work or if the turning of eggs causes too much trou-

ble, write the Cousins Incubator Company, Warren, Pa. They can help you.

Charles Howison, Sandwich, Ill., breeder of Buff Rocks, has several fine pens mated for egg season.

Get a setting of Barred Rock eggs from Truckenbrod Bros., Mendota, Ill.

A. B. White, Nichols, Mo., breeder of Black Langshans, has several fine pens mated for the egg season.

Secretary of the National Single Comb Buff Orpington Club.

How to Raise Little Chicks

That is what you want to know, and here are two messages from successful poultry raisers. Read them carefully.

Mrs. Joseph Irvine, of Five Mile, Montana, says: "I use Pratt's Poultry Regulator and would not try to keep chickens without it. Out of 60 young chickens hatched this year I raised 59. I did not have one sick chicken. The one I lost got hurt."

Mr. Win. Crane, of Laurel, Md., says: "I gave Pratt's Poultry Regulator to my flock of young Barred Plymouth Rocks, with the best of results. I only lost one after using it. My mother-in-law gave it to a flock of 75 young turkeys and did not lose one." That's what two of our customers say and we add this: Give daily

Pratt's

Poultry Regulator

(For 35 Years called Pratt's Poultry Food)

mixed with the regular feed and it will (1) Help you raise your little chicks, make them grow rapidly and develop into fine broilers or good layers. (2) It will keep the flock healthy and greatly increase the egg production. (3) It is the best tonic, regulator, egg producer and disease destroyer ever made. (4) It is guaranteed and will insure you profits. Successful poultrymen for nearly 40 years have been using Pratt's Poultry Regulator. Order it to-day. Packages 25c., 50c. Sacks \$1.25, \$2.50, 100 lbs. \$9.00. Use now Pratt's Lice Killer. It will positively destroy all kinds of poultry lice. Price 10c., 25c., 50c. Send to-day for "Rhyme and Reason." It's free.

Pearl Grit

The importance of true grit as a regular ration should not be overlooked in cold, blustering weather. Nourishing properties and abundant inducement for exercise are absolutely necessary to keep up the health and vigor required for egg production. Pearl Grit is an ideal grit for the purpose. It is clean and white and when scattered in the litter

Keeps the Hens Scratching

to find it. It is sharp and hard making a perfect grinder. Chemical analysis shows that it contains 60 per cent Calcium Carbonate (lime), 14 per cent Magnesium, besides Iron, Silicon, Aluminum Oxides and other shell-building, muscle-making, egg-forming and feather-growing materials which are dissolved by the digestive secretions and assimilated by the bird's system. Pearl Grit nourishes and renews the bodily organs making the fowls both healthy and prolific. No other shell making material is required when Pearl Grit is used—its a double purpose grit that grinds and makes shell. Try it. Its a time, money and labor saver.—Write for free booklet and prices.

THE OHIO MARBLE CO., Box 209, N. Wayne St., Piqua, O.

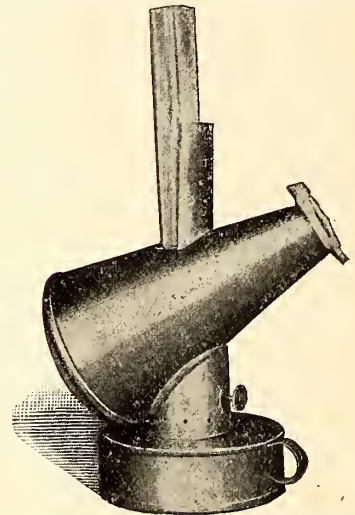

A NEW EGG TESTER.

To the poultry keeper who is in the business for all that he can get out of it—in fact, to every one keeping poultry, a reliable egg tester is a necessity. Heretofore with the ordinary egg tester it was impossible to determine a germ in an egg before the fifth day of incubation and in most cases it required seven days.

Dr. M. S. Sherwood, proprietor of The Pocantico Poultry Yards, Pocantico Hills, N. Y., has produced a tester which he guarantees to give such a powerful light that white shell eggs with germs can positively be distinguished from clear eggs on the second day, and dark shell eggs on the third day.

The tester is made of tin with a nickled brass reflector at the back and made in such a way that all rays of light are thrown at

one point. There is no large cumbersome wooden box to handle, nor anything that will burn the fingers while testing. It is light, convenient and easy to handle—made for business—and will do it.

In making a second test of incubator eggs it is invaluable as any germs that are dead are easily distinguished from the live embryo.

A tester of this kind would soon pay for itself as all clear eggs tested out on the second or third day whether under hen or in an incubator are perfectly good for table use. We advise any of our readers who need a good tester to write for one of the neat, illustrated leaflets the Pocantico people send out free. It illustrates and describes the Pocantico egg tester, giving numerous testimonials. Mention the American Poultry Journal when writing.

If you want to try a new seed house this spring, try on our say-so, R. H. Shumway, Rockford, Ill. We have a good deal of confidence in the Shumway seeds and certainly all confidence in Mr. Shumway himself, who has been growing and selling seeds perhaps longer than anybody else now in the business. By adhering strictly to the plan of selling only such seeds as he knows must prove satisfactory to his customers, Mr. Shumway has built up a very satisfactory business. He publishes a fine catalog. Look up his advertisement in this paper and write him for it.

In our description of the Chicago show in February, issue a fine exhibition of Klein-Anderson's was unintentionally omitted. They are proprietors of the Sunny Side Poultry Farm, Macon, Ill. At the recent Chicago show they won on Barred Plymouth Rocks fifth pen, special for the best shaped male and second best collection consisting of two cocks, two hens, two cockerels, two pullets and two pens; also special for the best display. This is a splendid record, in view of the fact that they have never exhibited at Chicago before.

F. W. Niesman, Freeport, Ill., bought the entire flock of Partridge Cochins from Anderson & Klein, Macon, Ill. These birds have been line bred for the last fifteen years and Mr. Niesman will continue the same line. Mr. Niesman issues a large catalogue which should be in the hands of all poultrymen.

James Workman, breeder of White Wyandottes, French Village, Ill., has several fine pens mated for the egg season.

HELP FOR POULTRY PROBLEMS.

Readers of the American Poultry Journal who are confronted with poultry problems which they are unable to solve will no doubt be glad to avail themselves of the help offered by a man who has been in the poultry supply business for years, and knows how best to solve the various problems that constantly arise. The man who makes this liberal offer is Walter P. Stokes, of the late firm of Johnson & Stokes, now conducting Stokes' Seed Store, 219 Market street, Philadelphia.

Mr. Stokes gained much valuable knowledge as active business manager of the old firm, particularly of the poultry supply end of the business. He has connected with him other practical men of experience, who are also competent to give advice regarding everything pertaining to poultry, pigeons, bees, the operating of incubators and brooders, the building of poultry houses and all other poultry problems. Mr. Stokes' help and advice have been extremely valuable to his customers and brings them in close personal touch with him. He is willing to give the benefit of his experience to those who write to him whether or not they are his customers.

The new Illustrated Poultry Supply Book which he has just issued should be in the hands of every poultryman. It tells about the various "Vigor" Foods for making hens lay, promoting good health and strong development, and about the best forcing, scratch and other foods. It contains much helpful information about gape and roup cures, lice killers, incubators, brooders, caponizing instruments and the best poultry supplies of every sort. One of its most valuable features is a Daily Egg Record which enables the poultryman to keep account of the egg production and profits for the entire year.

A copy of this catalogue will be mailed free to any address on request to Stokes' Seed Store, 219 Market street, Philadelphia.

One of the greatest labor-saving garden implements ever invented is put on the market this year—a new combination Seeder, Wheel Hoe, Cultivator and Plow. It opens the furrow, sows any kind of garden seed accurately—in hills or drills—covers, rolls the ground and marks the next row, all in one operation. It enables one man to do the work of three to six men, and does it easier and better than it was ever done before.

It is a PLANET JR. NO. 6, made by S. L. Allen & Co., who do things in their own way. Every different kind of tool they turn out represents practical knowledge of gardeners' problems. Each model is specially designed to do its work in the best and most thorough manner—a small improvement here or there that may not seem to make any difference, soon proves its great value when the implement is put in operation. The materials, too, are the finest known to the implement trade. Some people think it extravagant to use such high-grade materials and put so much work on their tools as they do, and very extravagant to have five men to do nothing but inspect. But every practical farmer and gardener knows what this means to him, and understands why PLANET JR. tools last and can be guaranteed.

Every farmer and gardener, whether he has a PLANET JR. or not, should send for the new 1907 PLANET JR. CATALOGUE—of Seeders, Wheel Hoes, Horse Hoes, Riding, Orchard and Beet Cultivators—45 kinds in all—with the new and practical improvements. A postal mailed to S. L. ALLEN & CO., Box 1107 T, Philadelphia, brings this interesting book by next mail.

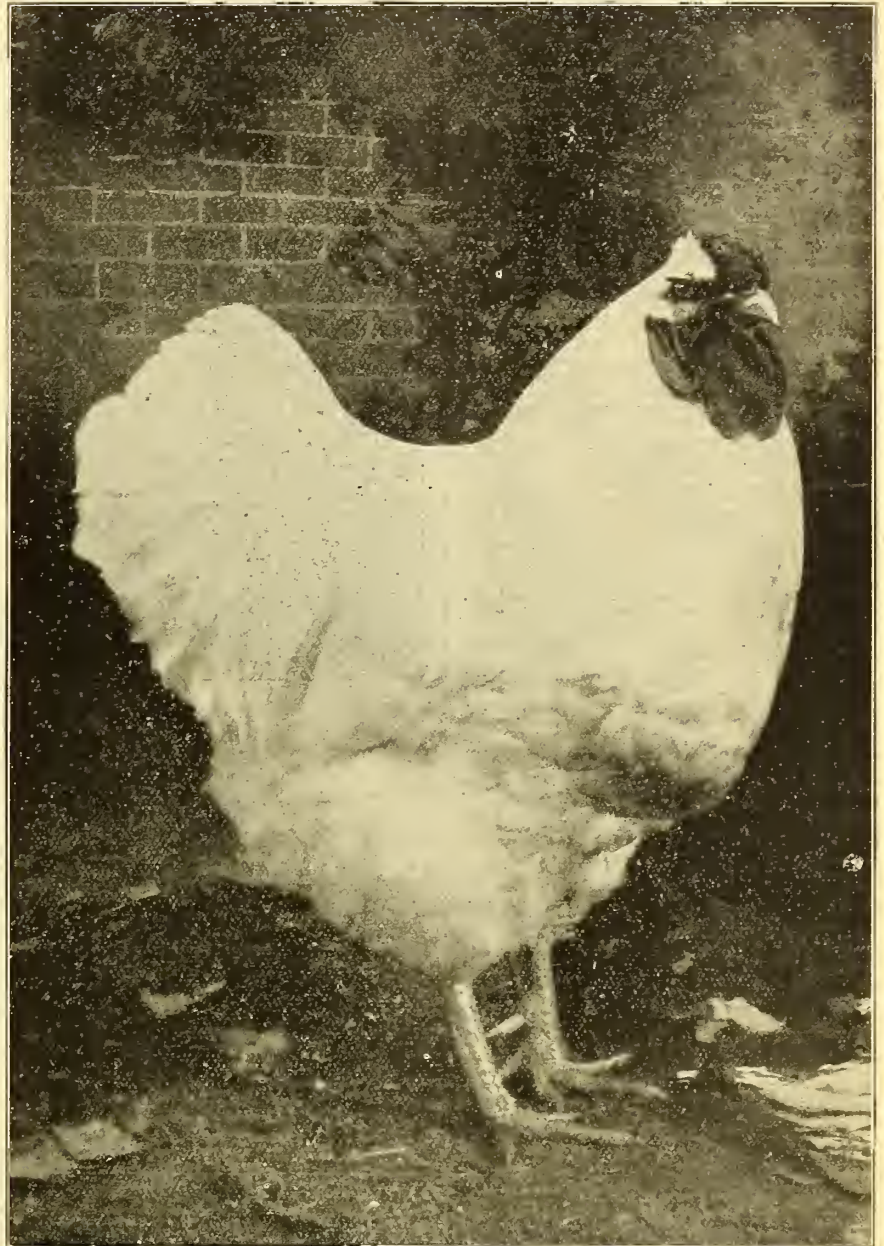

Dr. O. P. Bennett & Co., Washington, Ill., have made a wonderful record with their Barred Rocks the past three years and now claim the championship of the west. They won at Chicago this year 1-3 cock, 1-5 hen, 1-4 cockerel, 2-4 pullet, 2-3 pen, championship male, championship female, best colored male and female, best two males, best two females, best two males and females, best display, the American Plymouth Rock Club national cup, two other silver cups and fourteen specials. They have mated up some of the best birds ever shown for their egg trade, and will be glad to send to all their free circular, showing pictures of their Chicago winners and mating list to all sending their names and address.

Don't be so foolish as to believe all that you hear about chickens, especially when they are telling you how to make them lay eggs in winter. If the trick is so easy as they try to make you believe, why don't you get the eggs to prove it? What makes so many of you keep chickens that eat their heads off in winter without laying you any

eggs? What makes you keep chickens that lay all of their eggs in warm weather? What makes the cold storage people pack eggs in warm weather? And why do they furnish the winter markets with 90 per cent of the winter eggs, and why can't the poultry raiser and farmer furnish more than 10 per cent of them? We have a method of making chickens lay eggs in winter, and we make them lay when all other methods have failed. The beauty of this method is this: It is cheap, simple and easy to use, and there is so little ex-

and first pen. He reports that he still has some choice cockerels and females to spare. Write for his new mating list and mention American Poultry Journal.

We acknowledge receipt of the 1907 catalogue of the Harrison Nurseries, the famous tree growers down on the eastern shore of Maryland, at Berlin, who have something over a thousand acres in fruit and other trees, shrubs and vines. The Harrison people are located in a specially favored climate for growing nursery stock and they

CHIEF WINAMAC.

White Wyandotte cock. Bred and owned by Charles V. Keeler, Winamac, Ind. Valued at \$500.

pense attached to it that you can't help but use it. We are now ready to give out a whole lot of information which is absolutely free, and a postal card will bring this to you by addressing Charles Schild Company, Box 10, Station C, Cleveland, Ohio.

Harmon Bradshaw, Lebanon, Ind., the Single Comb White Leghorn specialist, sent a cock, hen, cockerel and pullet to the last Boston show, unattended, and won second cock, third hen and sixth cockerel, and this in one of the strongest classes of S. C. W. Leghorns ever gotten together at Boston. At the late Indianapolis, Ind., show he made nine entries and won eight ribbons: first cock, second and third hen, second and third pullets, third and fourth cockerels

are making the most of it. They have had a most remarkable growth in recent years, but it has only kept pace with the demand for their stock.

Many of our readers have been patrons of the Harrison Nurseries for years. To them it is not necessary to speak of the excellence of the stock. To those who have never planted anything "grown by Harrison's" we would suggest sending for this 1907 catalogue and getting an idea of the advantages of buying nursery stock from them. Look up the Harrison advertisement elsewhere for correct address.

William Miller, breeder of White Rocks, Crescent, Mo., has twenty-eight pens mated up for the egg season. The price of eggs is \$5 per setting.

CAPON TOOLS

CAPONS bring the largest profits—100 per cent more than other poultry. Caponizing is easy and soon learned. Progressive poultrymen use **PILLING CAPONIZING SETS**.

"Natural and Artificial Duck Culture."

By James Rankin, So. Easton, Mass.

We have just published the fifth edition of our book, "Natural and Artificial Duck Culture," enlarged, revised and illustrated, describing the growth and management of the little birds, from the time they leave the incubator until they reach the market. It includes food formulas to meet the different stages of growth, also the construction of buildings and management and care of incubators during the process of incubation, as well as our experience for the past thirty years in the business. Mailed to any address on receipt of 50c.

MAKE GOOD MONEY

In Poultry business. Others do it. Why not you? Our big illustrated book, "Profitable Poultry," tells how to breed, hatch, feed, grow and market to make lots of money. Starts you on the road to success. Describes most wonderful Poultry Farm in the world—32 kinds of fowls. Gives lowest prices on fowls, eggs, incubators, everything for Poultry. Mailed for 4 cents in postage. Berry's Poultry Farm, Box 74, Clarinda, Iowa.

1907 CATALOGUE OF THE CYPHERS INCUBATOR COMPANY.

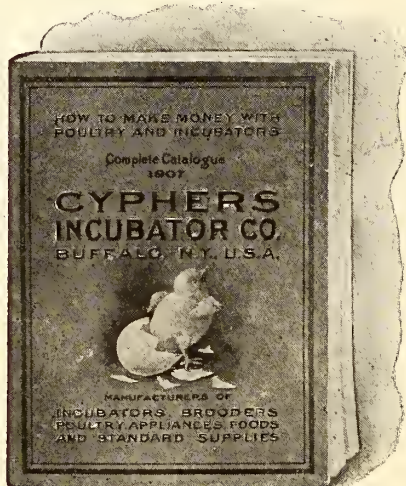

For several years the Cyphers Incubator Company, of Buffalo, N. Y., have been complimented in these columns on their annual catalogue; but this year they have surpassed anything ever before attempted in the catalogue line. To give our readers some idea as to the magnitude of this catalogue and what it contains we present the following facts:

FACTS ABOUT CYPHERS INCUBATOR COMPANY 1907 CATALOGUE.

It contains 260 pages. This edition piled flat one on top of the other would reach a height of 4,557 feet.

If the pages were placed edge to edge they would extend 5,468 miles, being further than New York to San Francisco and back to Buffalo—further than across the Atlantic to Europe and back again.

The pages placed side by side would cover

a 450-acre farm and have enough left over for a fair-sized poultry farm.

The illustrations would cover a 100-acre farm with pictures.

CONTENTS.

1. Six original chapters on poultry raising. Chapter I—"Magnitude of the Poultry and Egg Industry" (page 66). Chapter II—"Review of Our Great Poultry Markets" (page 102). Chapter III—"Profit-Making Broilers, Roasters and Capons" (page 113). Chapter IV—"The Profitable Pekin Market Duck" (page 138). Chapter V—"Successful Chick Rearing" (page 153). Chapter VI—"Profitable Egg Farming" (page 169).
 2. Full description and illustrations of incubators, brooders, poultry foods and poultry supplies manufactured by Cyphers Incubator Company (page 11).
 3. Photographs and business history of members of the company (page 5).
 4. Full-page illustrations of factory, office, mill and branches (14 pages).
 5. Illustrations and description of Cyphers' fifty-acre poultry farm.
 6. Photographs of poultry experts at government experiment stations, with illustrated reports on artificial incubation (page 154).
 7. Illustrations of large, practical poultry plants throughout America, with report of their managers or owners (page 170).
 8. Photographs of foremost American fanciers and plants (page 215).
 9. Reports from women who practice artificial incubation (page 248).
- Any of our readers who are interested in successful incubation can secure one of these catalogues free by sending to any of the following addresses and mentioning American Poultry Journal:
- Cyphers Incubator Company—Court and Wilkeson streets, Buffalo, N. Y.; 23 Barclay street, New York, N. Y.; 26-30 Union street, Boston, Mass.; 310 Fifth avenue, Chicago, Ill.; 2325 Broadway, Kansas City, Mo.; Third and Linden streets, Oakland, Cal.; 117-125 Finsbury Pavement, London, England.

Royal Incubator at \$12.75—These are days of low prices among incubator people, but a machine that seems to go just a little beyond anything else in the way of a bargain is this 230-egg No. 3 Royal at \$12.75. It is a double walled, self regulating machine with all the appliances and

devices. Its weight is 140 pounds, and we have the word of the manufacturing company they consider they are offering "the best incubator proposition that has ever been made by any incubator company in existence." The Royal has been one of the most popular incubators before the public for years. It enjoys the enviable reputation among poultrymen of being the one really high class incubator that has always sold at a popular price. The figure named above is just about a third less than it has ever been sold for before. If you want an incubator bargain get in touch at once with the Royal Incubator Company, Drawer 80, Des Moines, Iowa. They will send you their catalog free. Enclose 10 cents and they will send you their valuable little book on Proper Care and Feeding of Chicks, Ducks and Turkeys.

Ira C. Keller, Prospect, Ohio, has several hundred very fine White and Silver Laced Wyandottes yet to spare of the highest quality at bargain prices to move them. He also has a nice lot yet to spare of Golden Laced and Black Wyandottes at very reasonable prices. All the above birds are out of his New York, Chicago, Cincinnati and World's Fair winners. No better bred stock in the world and quality the finest. He can spare you fine male birds or matings for the best results to suit. He also has some of the best Scotch Collie pups to spare, cheap. Write him. His breeding pens for the coming season are finer than ever before from which he will sell eggs.

H. A. Emmel, Mars, Pa., can furnish American Poultry Journal readers with eggs for hatching that will produce winners. His stock won for his customers ten firsts, three seconds, three thirds, one fourth and one fifth the past season at six national shows and still more to hear from. Look up his ad.

If in need of Columbian Wyandottes don't forget to write John A. Flick, Ravenna, Ohio. He has the "goods."

PURDUE THE SCIENTIFIC INCUBATOR.

There is reason for saying that the Purdue Incubator, at least to as great an extent as any incubator made, can lay claim to being built on scientific principles. It is manufactured by the Interstate Incubator Company, at Indianapolis. It is not, of course, the patent of the great university whose name it bears, but in its essentials it comes so wholly from the experiments conducted by this university at its experiment station as to embody perfectly all the discoveries on the subject of incubation that the university has made. The patentee was formerly in very close touch with the university. He was a student there and participated in the experiments.

The Purdue Incubator is making the goodly record that was expected of it. It brings forth uniformly large hatches and the chicks come strong and vigorous, with much better chance of surviving the critical times that come to all little chicks, than in the ordinary incubator. Of course, the heating, ventilating and regulating, which are but the means to the one desirable end are admirably worked out. It is a machine that can be started and then let alone. It is dependable. It does not require the constant attendance that many machines do. The matter of right brooding has also received the attention it deserves by the Purdue people. The contact hover and plan for preventing over-crowding and smothering of chicks are features.

The inside information and details of these incubators and brooders, and the application of the experiment station principles are to be had in the catalogue. A copy may be had by writing as directed in the advertisement elsewhere in this paper.

Will H. Schadt, of Goshen, Ind., writes us that he has eight grand pens of S. C. Buff Orpingtons mated up for the egg trade, every bird a solid buff and up to standard in weight. He has just issued a fine up-to-date catalogue, giving a description of all his matings, also photos of many of his prize winners. This book will be sent free to any interested parties. His winnings this season were as follows: Columbia City, Ind.: First and third cockerel, first cock, first and second pullet; first, second and third hen, and first pen. La Grange, Ind.: First cockerel and first pen. Goshen, Ind.: First and second cockerel, third cock, first pullet; first, second and third hen; first pen, state silver cup for best display. Cleveland, Ohio: First cockerel, second pen. Chicago, Ill.: First pullet, second pen, fourth and fifth hen. Indianapolis, Ind.: First hen, second pullet, third cockerel.

Chas. Staaff, Peapack, N. J., the Barred Plymouth Rock specialist, informs us that he has made up his pens for this season and that he has four Bright birds heading four of his cockerel matings, two of these are brothers to the first New York cockerel 1907, and one a son of first cock at same show. If you are looking for eggs from good Barred Rocks you should write to Mr. Staaff today and mention American Poultry Journal.

Mrs. Frank Metcalf, of Red Feather Farm, showed twenty-five fine Buckeyes at Youngstown, Ohio, December 4-7, and won many prizes. The highest scoring trio in the show were her Buckeyes, and fifteen scored from 90 to 95 points. At the E. O. P. A. show at Warren, December 11-14, the highest scoring male in the show was a Buckeye from Red Feather Farm; also the highest scoring ten birds winning the \$20 silver cup, and the most of one variety scoring 90 and better, as she had twenty-five scoring from 90 to 94 in five uniform pens, on exhibition there.

H. C. Beebe, proprietor of King Hill Egg Farm, Canton, Ill., writes: "I want your readers to know that through our ads in American Poultry Journal have done some business this year, which indicates that our stock, bred from mammoth winter layers, has forged to the very front." Mr. Beebe has made some grand sales of his Single Comb White Leghorns, among the most notable were 50 hens to H. H. Havey of Nebraska, 100 hens to C. B. Galloway of Tennessee, a large order to Daniel Ochver of Mexico. The following is a testimonial from one of his numerous customers:

Liberty, Kan., Jan. 22, 1907.

H. C. Beebe.

Dear Sir: I went to the chicken show with those chickens hatched from 15 eggs I got from you. The cockerels scored 94½, 94¾; pullet scored 95. Six others 93 to 94¾.

J. S. Moor.

Better write Mr. Beebe today and mention American Poultry Journal.
